60035. As a matter of fact, do they address their original application to you or does the original letter come first before the Board?—As a matter of procedure, I always arrange that they should send their proposal through the secretary. Having arranged with an owner that he will offer his estate to the Board, I suggest to him to send a proposal on the prescribed form to the Board. I either send him the forms myself or request him to apply to the secretary for them.

60036. The original negotiation does not therefore, in point of fact, concern the Board. It comes to you, and you put it in form before it reaches the Board—is not that so?—Yes; as far as the mere offer is concerned; but I never open negotiations for an estate without getting the authority of the Board. The procedure followed is, that when the vendor makes an offer, through the secretary, of his estate, before I take any further action in the matter, I submit a short report to the Board as to the advisability or otherwise of the purchase of the estate, chiefly from the particulars supplied by the vendor, when I have no personal knowledge of the estate. If it is an estate apparently suitable, I ask the Board's authority to be allowed to inspect it. Then, having inspected it, I make an estimate of its value, go into full details, classifying the rental first term, judicial, second term, and so on. I also value separately the land, if any, in the owner's hands, and I furnish to the Board a report as to the maximum price which I could recommend the Board to offer. I also furnish at the same time an approximate estimate of the cost of re-arranging the estate, and the Board, having considered my report, decide upon the offer to be made.

60037. That being still in the affirmative? The offer then issues. It is prepared by the solicitor, and is issued by the secretary, and signed by him at the time.

60038. Then you resume the negotiations with that authority?—As a rule, we don't make a second offer. It has not been the practice of the Board to attempt anything like haggling in the matter.

60039. But when you have sent in your report to the Board, they accept your recommendation that a certain price be offered? Yes. I take no further action.

60040. If the owner declines, so far you are stopped?—Yes.

60041. You take no further steps?—Not usually.

60042. If he makes an offer or suggestion, that again is carried out by the chief land inspector, under the authority of the Board?—Yes.

60043. That is, so far as the purchase of an estate is concerned?—There is some further procedure. The Board's offer is always conditional on verification of the particulars supplied; and when the owner accepts, the next step is to get all the tenants together, inspect their last receipts, and verify the rental.

60044. Is that done by one of the five assistant inspectors, referred to here?—Yes. It is done by one of those. Then, if there is a discrepancy, as very frequently arises, that is to say, if the rent and arrears in rental are not identical with the rent which we find from the receipts has been collected by the owners, we communicate with the owner, and arrange for the re-adjustment of the purchase price.

60045. I won't take you through steps so detailed as that, but the subsequent negotiations, up to the stage of purchase, when that is carried out, are in the hands of yourself, the staff of assistant land inspectors, and assistant inspectors?—Yes.

60046. Then the legal steps of the purchase are carried out under your solicitor?—Yes; the completion of the purchase. The originating request has to be prepared by the vendor's solicitor, in communication with the Board's solicitor, and is lodged with the Land Commission.

60047. Your next appearance on the scene is when the purchase is effected?—Yes.

60048. It then falls back into your department, and you consider the question of re-settlement and re-arrangement?—In the meantime I submit to the Board a detailed estimate of the receipts and expenditure for the period from purchase to re-sale. In the first instance I only submit an approximate estimate. After it has been arranged to purchase we have to go into all the details the roads to be made, the holdings to be striped, and the houses to be built, and all that; and we supply a detailed estimate of the future receipts and expenditure on such estate from the time of purchase to the time of re-sale; and the Board having approved of that, I am allowed to go ahead, and complete the works within the limits of the approved expenditure, but I cannot exceed that expenditure without an authority from the Board.

60049. Those works are carried out by your clerk of works, I suppose, and superintended generally by your inspectors and assistant inspectors?—Yes.

60050. As regards that particular estate, you hold, so to speak, a watching brief throughout?—Yes.

60051. When the different improvements, re-settlement, and re-arrangements are carried out, the thing passes into the hands of the tenants, and, so far, your function finishes?—Yes. We have a great deal of detailed work in connection with the striping in getting tenants to surrender to us their old holdings and enter into tenancies of new; a great deal of legal work also is incidental to these arrangements.

60052. I need not carry you into these details. There are at present one chief land inspector, one assistant, four inspectors, and five assistant inspectors—that is eleven altogether. What do you consider the amount of land or the value of land which those eleven men at present are capable of dealing with?—With the assistants, I estimate that the present staff could deal

Jan. 24, 1908.

Mr. Henry Doran.

with about £300,000 worth of property per year, if we were allowed to proceed without interruption, which we have not been permitted to do for the past three or four years. We have been frequently asked to reduce expenditure and delay works owing to possibility of funds running short. Then we have great delay owing to the legal difficulties you heard so much about. If we could proceed systematically and without interruption I believe my staff could turn out about £300,000 worth of property in the year of the average class we have dealt with.

60053. Speaking very roughly, I think you have heard that the suggestion before the Commission now is that you should deal with something like £1,000,000 worth of land a year?—Yes.

60054. That is apparently three times as much land as you are dealing with now?—Yes.

60055. Should you say that the extent of additional land with which you would deal would, in equal proportion, increase the amount of work?—Not as regards the duties of the superior officers. I propose reorganising the staff, and having nine inspectors

60056. You have got four at present?—Yes; and five assistant inspectors. My view is to have an inspector in each county; or in a county in which there would be a great deal of work to do, we would probably have two inspectors. We would require one superior officer in each county or other defined area whose duty it would be to attend to the work of that district, very much as I try to do over the whole area, and to report as to the suitability of estates offered, and all other matters that the Board's ruling was required upon.

60233. CHAIRMAN.—There is one point of some difficulty on which you have given us a memorandum. It is a question of uncompleted sales where bargains for the sale of holdings have been entered into within the congested area but not completed, and you foresee difficulty about arranging for them with the Estates Commissioners. Suppose the Estates Commissioners no longer operate in this area and the Board take it entirely in hands, how are these cases which have been negotiated through the medium of the Estates Commissioners to be settled?—My suggestion was that where they did not declare properties, the terms of purchase of which were arranged, to be "estates," the matter was not finally closed, and I thought the simplest way was that the Estates Commissioners should hand over all the originating requests and originating applications in respect of these estates and let the new Board be empowered to deal with them, and decide whether they would certify them to be estates to be sold by direct sale.

60234. Would that create any difficulty among the landlords who had agreed to sell to the Estates Commissioners?—It might. A landlord might reasonably object, as he had arranged for the sale knowing the procedure to be followed as regards the completion of the matter, namely, that the sale was to go through the Estates Commissioners, and that now a new body was empowered to review and reject or accept his proposals. I think perhaps there is an objection in that way.

60235. Mr. KAVANAGH.—And the Estates Commissioners will have settled with the tenants, too?—In these cases they would not have settled with the tenants if they did not reach the point of their procedure when they declare it to be an estate.

60236. Most Rev. Dr. O'DONNELL.—But the bargain with the landlord as to price would have been complete?—Not completed where it is not declared to be an estate after inspection.

60237. What then would be the landlord's objection that you would anticipate?—It is completed so far as the prices arranged are within the zones, but with regard to the holdings that did not come within the zone conditions, the prices are subject to alteration after inspection. It frequently happens that the Estates Commissioners will say, "We cannot advance quite as much as you have arranged with your tenants for these holdings, and will only give you so much." If they had inspected and had conveyed their decision to the vendor and that he agreed to their terms in the ordinary procedure the property would be declared to be an estate on the adjusted price. The objection the landlord will have is this "Your Board is coming in to review the price proposed for the holdings that are not within the zone conditions; a new body is coming in to review the bargain; I don't think that is fair, and I won't approve of them."

60238. Sir FRANCIS MOWATT.—Why won't it be fair to him?—Because he lodges an agreement on the understanding that the Estates Commissioners only could fulfil that function.

60239. He might think your Board might fix it higher than the Estates Commissioners?—He may or may not think so. It is a new condition introduced which he did not contemplate when arranging the sale.

60240. Mr. KAVANAGH.—He has been to all the expense and trouble of stating his case, and the new Board then steps in?

60241. Sir ANTONY MACDONNELL.—The new Board would step in and buy *in globo* all these estates for which agreements have been come to between landlord and tenant?—Yes, *in globo*, if portions of them required treatment.

60242. In any case you would buy *in globo*?—We would not buy an estate that does not require treatment.

60243. You would allow that to pass through, and then you would proceed to differentiate the part that needed treatment and the part that did not. Would not that require an enormous staff, to distinguish, to draw up new agreements, new maps and so on?—No. I would not think so.

60244. If you divide an estate which was a single estate, and declare it to be two estates, you will have to prepare a map?—That is a very small matter.

60245. I think that will be a very protracted matter and a very expensive matter, and it will require a large establishment for these 30,000 holdings?—No, that is not a matter involving much trouble, because the holdings being in a condition in which they might pass without treatment, the mapping is not difficult.

60246. You would have to make out very many maps?—Under the new rules we would oblige every vendor to lodge a map showing the holdings to facilitate us in deciding whether the estate needed treatment or not. At present we only require a vendor to lodge a map showing the boundary of his tenanted land and his untenanted land. He has not to show the separate holdings at all. We would require that now, and consequently the checking or revision of maps for the good portion of the estate would be a small matter.

60247. Most Rev. Dr. O'DONNELL.—These difficulties arise with reference to estates in an incomplete condition. I know owners are now anxious to negotiate with the Estates Commissioners, as they anticipate that there may be a change in the arrangements with regard to the bonus in the near future?—They tell me that that is their chief reason for now desiring to sell, and also to get on the list for payment of purchase money. Some of the largest owners in Mayo have approached me within the last two months, and asked me if they offered their estates to the Board would the Board purchase, and I had to give them an evasive reply until the last Board meeting, and since then I told those who communicated with me that the Board were debarred from purchasing for the present.

60248. I want Mr. Doran just to state to the Commission whether this factor would not within the next couple of months probably very seriously enlarge the difficulty of dealing with land in an uncompleted condition as regards transfer, from the circumstances that many landlords in the West, fearing that the change in the bonus would not be favourable to their interests, would hurry during these months to try to arrange for a sale to the Estates Commissioners?—I look upon it as a very serious matter, mainly for this reason, that according to the figures prepared by Mr. Callan nearly half the holdings in the counties containing congested districts are either sold or have been offered for sale, so that only rather more than half remains open yet, and I believe that a very large proportion of the owners of the remaining half will within the next three or four months offer their estates to the Estates Commissioners, because they anticipate a change in the conditions of the bonus.

60249. If those agreements went through and were completed a very large number of holdings would be vested in the tenants without being raised to anything like an economic condition?—You would then have to deal with what I have described in a memorandum I have handed in as vested congestion.* A considerable area of the non-economic and intermixed holdings will be vested, and the problem of dealing with vested congestion will be much enlarged.

* See p. 45.

60250. Sir ANTONY MACDONNELL.—That would be the case if the Estates Commissioners did not exercise their functions of relieving congestion, because they exercise these functions on estates which they don't purchase as congested estates?—Would they exercise these functions in respect of estates purchased by direct sale?

60251. They don't exercise their functions I suppose with the particularity that you do, but that they do relieve congestion on estates passing from landlord to tenant is a fact?—Then I think that the field for the Board's future operations would be very much reduced, and it would seem to me likely to alter the whole problem as discussed by the Commission if they are allowed to go on.

Sir FRANCIS MOWATT.—They will be allowed to go on until some change takes place in the law.

Sir ANTONY MACDONNELL.—What Mr. Doran suggested was that there ought to be an executive order issued by the Irish Government prohibiting the Estates Commissioners from going on with those estates. I have been thinking over that, and I think it is a matter upon which you ought to have opinion. So far as I have been able to understand it I don't think it is in the power of the Irish Government to issue such an order. Mr. Callan reminds me that it appears from a judicial decision in the Downes-Martin case that such an order would be *ultra vires*.

Sir FRANCIS MOWATT.—What court was that before?

Mr. Callan.—The Estates Commissioners. They offered to state an appeal for the Judicial Commissioner, but an appeal was not taken.

Most Rev. Dr. O'DONNELL.—The difficulty is obviously increased from the fact that owners will now hasten to make their bargains with their tenants in view of the rearrangement of the bonus. That is only one side of it Th more serious side is that if the owners of these estates were anxious to sell them to the Congested Districts Board, the Congested Districts Board has been told that it is not in a position to buy them pending the report of this Commission. That is the crux. If the Congested Districts Board were in a position to buy these estates it would not be necessary to issue such an order.

Sir FRANCIS MOWATT.—The Congested Districts Board has been unable to purchase because it had no means at its disposal?

Sir ANTONY MACDONNELL.—Yes; they say, "You shall not purchase any estates with which you have not means to deal." Our income of £86,000 is fixed by legislation. We got the last £20,000 under the Act of 1903.

Most Rev. Dr. O'DONNELL.—Two or three months ago, with the Chief Secretary in the chair, we agreed to go on purchasing a fair number of tenanted estates on the ground that the expenditure on improvements necessary would not be an immediate thing at all, and that there would be sufficient income in years to come to meet the improvements on these estates.

Sir ANTONY MACDONNELL.—At the last meeting, at which your lordship was not present, that was reconsidered. The whole thing was gone into, and it was considered that in view of the distinct orders from the Treasury we ought not to carry out further purchases.

Most Rev. Dr. O'DONNELL.—The expenditure on these estates will not come on immediately. You cannot do anything to bring it on until next winter even if you bought them. The arrangement was made that the Congested Districts Board should go on buying these estates now because otherwise they will get very much out of hand. They will be sold through the Estates Commissioners and they will be in an incomplete condition when legislation that we anticipate is passed.

Sir ANTONY MACDONNELL.—I think we were rather impressed by this fact, that we should only be in the position of the receivers for the landlords on these estates. If we had not money to purchase these estates the estates would not be vested in us; we should not be the owners and we should not be able to realise the rents otherwise than as the attorneys of the owners.

Sir JOHN COLOMB.—Another important matter is that if a vast number of estates pass now because of apprehensions about the bonus on those estates, where there is untenanted land you will have farmers' sons in discharge of the obligation on the Estates Commissioners planted on the land, which will make the position of the Congested Districts Board hopeless.

60252. Most Rev. Dr. O'DONNELL.—What is your recommendation with reference to estates containing grass lands, in large proportion, in the hands of the Estates Commissioners when the Congested Districts Board comes into authority: you would not like that the grass lands should pass away from the relief of congestion?—What I think is this. If the Estates Commissioners proceed with the purchase now, knowing that a large number of vendors were anxious to sell. I think it is not at all improbable that one-half of the remaining half of the unsold estates will be arranged for before next November. That being so, and purchase agreements being entered into between tenants and landlords which destroy the relations of landlord and tenant, there would be such a small and scattered area free for the new Board to deal with they would have no chance of dealing with congestion in the comprehensive manner discussed by the Commission. I don't think the Board should be continued at all in that event, for I do not believe they could do satisfactory work, and it would be better to allow the Estates Commissioners to complete the small remnant that will be left.

60253. Sir JOHN COLOMB.—Unless additional powers were given to the Board to interfere with these people?—It would seem to me if the Estates Commissioners do that you ought to let the Estates Commissioners complete the work, because if they get control of a large portion of what now remains unsold, and binding legal agreements have been entered into with respect to the tenanted and untenanted lands, then the new Congested Districts Board will have to deal with the remaining congestion in very detached areas, and they could not do it satisfactorily, or with any credit to themselves.

60253. Sir ANTONY MACDONNELL.—Why not? The thing would be only in agreements that are deposited with the Estates Commissioners. Now they have to take their turn on the *rota*, with a delay of several years. With the £36,000,000 to be dealt with, there is five years' work for the Estates Commissioners now. If they buy now they will have to wait five years. Where the Estates Commissioners have within the scheduled districts any untenanted land if it were arranged that that land should be held for the purposes of the Congested Districts Board except in so far as it is necessary for relief of congestion on bad estates which they bought, there you have met all the evils which the Bishop refers to?—It won't be practicable. What is happening is this. I will take Lord A——'s estate. He approached me through his agent to know if the Board would buy. I told him ten or twelve days ago that the Board could not buy. His agent then went straight away from the Claremorris office and arranged terms with the tenants; and the terms are these—all the untenanted land on the estate must be given to tenants or sons of tenants on the estate, and they won't have it otherwise. Other estates where there is untenanted land will be sold only on the same condition—namely, that the tenants will refuse to buy their holdings at all unless with the condition that all the untenanted land on the estate is to be given to them.

60254. Most Rev. Dr. O'DONNELL.—And their sons?—Yes.

60255. Sir ANTONY MACDONNELL.—That is perfectly easily met. Under the Act of 1903 the owner has a statutory right to come to an agreement with his tenants for the purchase of their holdings, but he has not a statutory right to come to agreements with his tenants as to land not on their holdings: at least he has not such a right as to force it on the Estates Commissioners?—He has not.

60256. If he has not there is ground for an executive instruction to the Estates Commissioners, so that they could do it? But the tenants feel that they have a very considerable power themselves, perhaps more than the Government think. They say, "that may be the law, but we are going to have the land."

60257. Of course if that is to be regarded as being the rule, there is no use in saying that we are going to keep the land for the relief of congestion if we anticipate we will have to yield to the claims of sons of tenants?- The estates that will be bought at once are the estates with a considerable amount of untenanted land upon them, because these are the estates on which the owners will get near their own price from the tenants when they are prepared to make the condition that all the untenanted land is to pass for their advantage. The situation is as plain as A, B, C.

Jan. 24, 1908.

Mr. Henry Doran

60258. Most Rev. Dr. O'Donnell.—If that be so would it be a matter of great urgency that the Congested Districts Board should be enabled now, if it can be done, to go on with the purchase of these estates?—I say deliberately this: if the sales of the estates go on, and the Board are prevented from purchasing, you should abandon the idea of forming a new Congested Districts Board. It would not be able to do effective work and would fail; and it should not be appointed if it does not get a fair chance of succeeding.

Mr. F. W. D. Mitchell.

Mr. F. W. D. Mitchell re-examined.*

60259. Sir Francis Mowatt.—I think you heard Mr. Doran give his evidence as to the increase in cost and numbers of the staff under himself as chief inspector for the land service on the larger scope which the Commission propose to entrust to the Congested Districts Board; but there will no doubt be an addition necessary to the secretarial staff, and we understand you are prepared to give us some evidence about that. Have you prepared a table, as Mr. Doran did?—I have here a general statement comparing the manner in which the income of the Board is now expended, the expenditure under each head at present, and roughly as it may be in the future under some of Mr. Doran's proposals.†

60260. Outdoor staff and expenses—that Mr. Doran has dealt with?—Yes.

60264. Mr. Doran gave us some information about the cost of the outdoor staff, which at present is £9,900, and for which the figure suggested is £32,800. Take your second item, indoor staff and office maintenance, £12,100; proposed, £26,700. Explain to us how the £12,000 is expended and what increase in numbers and salaries you contemplate in giving the increased amount of £26,000?—At present the cost of administration amounts in all for the present year to £36,000, including estates, fisheries, and everything. Out of that the share attributable to the estates business is £24,800, say, £25,000.

60265. Where do we get the £25,000?—It is the proportion of the cost of administration attributable to estates work.

60266. Outdoor staff and expenses in connection with estates work are put down at £9,900, that is to say, £10,000?—Yes. The portion of the office expenditure, the indoor expenditure, which is attributable to estates, is arrived at by a rough estimate.

60267. What was your rough estimate?—£12,100 with the office maintenance.

60268. And the law staff and expenses?—The law staff and expenses are about £4,000 this year. That is a little abnormal on account of the arrears due to Mr. Fottrell, the Board's late solicitor, having been paid this year.

60269. It is greater than it used to be?—Yes. Some of the charges for previous years have been paid this year. The normal amount would be more like £3,000, which I have given separately. Then I have an estimate of the increase which would be required if the estates business were trebled.

60270. The indoor staff and expenses now stand at £12,000?—Yes.

60271. How many clerks are there now in the estates branch?—In the estates branch there are now sixteen, exclusive of the head of the branch.

60272. Are they on different scales of salary or on the same scale?—They are all on different scales. The head of the branch is the only permanent civil servant. He is chief clerk and senior man in the office, next the assistant secretary and myself. His salary at present is £500 a year. His men are all temporary clerks, with salaries varying from 25 shillings a week to £200 a year. One of them has £200 a year. The majority have about 30 shillings a week. There are sixteen of them. Then it is proposed to add sixteen. That is double the staff for treble the work.

60273. When you say treble the work you mean treble the amount of land, but it does not follow that the work would be trebled?—As far as I can see it would be. There is nothing to show that the other estates would be less troublesome than those already treated.

60274. Then the estates which pass without treatment?—They are over and above the purchases of one million a year, on which the expenditure is to be calculated, I believe.

60275. You double the number of that staff—you add sixteen more?—Yes. That is, the estates branch which is entirely occupied with estates work.

60276. Mr. Sutherland.—Do you propose to leave the salaries the same as they are now—the thirty-two?—Yes. I estimate the salary at £100 a year, which would allow for some increments. For the first couple of months they have 25 shillings a week under the Board's regulations, and then if they are found to be efficient their salary is increased to 30 shillings, or £78 a year. It remains at that for three years. Then if they are doing good work and are thoroughly efficient their salary is increased to 35 shillings After they have been a year at that rate the Board may, if they are still giving approved service, increase their salaries further, gradually.

60277. Sir Francis Mowatt.—To any maximum?—Not to any fixed maximum.

60278. What is the highest a man is receiving?—As a general rule the maximum is about £150, but there are one or two temporary clerks in the office who have been there twelve years or more who go up to £200. But I may say that the clerical staff of the office is paid at a lower rate in the aggregate than any department of the Civil Service in Ireland.

60279. I believe that that is so?—I have the figures.

60280. You need not labour that point. I know that?—The next branch is Collection of Rents. I have treated that in the same way, assuming there would be a corresponding increase in the collection of rents.

60281. Sir John Colomb.—I understood from Mr. Doran that the collection was done by the Land Commission?—After the holdings are sold the Land Commission collect the annuities, but while the estate is in the Board's hands the Board collect the rent.

60282. When a property is acquired by the Congested Districts Board and the people continue under rent you collect the rents?—Yes.

60283. Most Rev. Dr. O'Donnell.—Mr. Doran was speaking of the outdoor staff?—Yes. In the rent branch there is an officer in charge with a salary of from £300 to £400, and there is a third-class clerk whose salary is £172 a year. There are eleven temporary clerks.

60284. That is there are now thirteen clerks?—Altogether.

60285. You propose to double that?—Yes.

60286. Mr. Sutherland.—You will only have one chief clerk all the same?—Yes.

60287. You will double the eleven?—Yes. Then the accounts branch is very mixed. The work includes other work in addition to the estates. The present staff consists of a book-keeper at from £350 to £400. Two third-class clerks, one with £180 and one with £95, and eleven clerks. I suggest adding twelve men, temporary clerks, to cost £1,200. That is, I propose that their salaries as temporary clerks would, roughly, average £100. Then the correspondence branch and the stores branch would also be considerably increased. The principal part of the work is in connection with estates, which would be increased. The correspondence branch is chiefly employed on estates work; so that the aggregate increase would be £14,600. That is including also the cost of office maintenance, printing, stationary, postage and telegrams.

60288. Sir Francis Mowatt.—I do not know how the figures were arrived at, but they are more than double the present amount?—I am giving you the figures for treble the work. That is the way I work it out. I am asking for £14,600 in addition to £12,100.

60290. Most Rev. Dr. O'Donnell.—You ask for £14,600?—Yes, in addition to the £12,100.

60291. Sir Francis Mowatt.—In addition to the £14,600 I should like to know what addition you have proposed to the salaries of the men holding office now, because of the increase of the staff under them?—I have not included that in the £14,600; something must be added for such increments.

* For former examination see Appendix to the First Report of the Commission [Cd. 3267, 1906], p. 22.

† See p. 52.

60292. This really represents the same rates of alary, but the additional number which you consider ecessary for dealing with three times the existing mount of work?—Yes.

60293. The existing amount of work, as I under- and it, is about £400,000 a year?—I am treating it, ughly, as a turnover of £330,000 a year; that is e-third of a million.

60294. Most Rev. Dr. O'Donnell.—At the same me the staff have been anxious, I suppose, to put eir case before the Commission for improved con- tions of employment?—The temporary clerks have nt a petition to the Commission, I believe, asking r some change of status. That is, they would like be placed permanently in the Civil Service and ven the right to pensions; and I should perhaps ve made some estimate for increase of salary of heads of branches. If the work is trebled they ill have far more men to look after, and if not im- ediately they would probably after a time naturally pect to have some increase of salary.

60295. Sir Francis Mowatt.—How many officers uld you say would come under that category? e greater number there are only doing strictly erical work. How many men have you alluded to the heads of offices?—There are five principal ads of branches, and one or two smaller ones. e stores branch consists of three men, for in- ance. You might say half a dozen.

60296. Now, as to the law officers' expenditure?— have consulted Mr. O'Connor about that, and he rees with the estimate I have made about in- easing the present cost, which is at least £3,000, to £6,500.

60297. Sir Antony MacDonnell.—What are the ms of the increase?—I have a rough memorandum the salaries here.

60299. Most Rev. Dr. O'Donnell.—You have esti- ated that the £4,000 would be rather exceptional this year?—Yes.

60300. What would be the normal corresponding th that?—I think at present if there are no arrears be paid this year that the normal expenditure uld be about £3,000.

60301. Therefore, the expense is not trebled, but it more than doubled?—Yes.

60302. The normal expenditure is in the proposi- n not quite trebled?—Yes. I have put on £500 his estimate. He asks for £6,000 I think.

60303. Sir Francis Mowatt.—What led you to in- ase it?—I thought it a very doubtful item. It s generally been more than we expected each year, d it would be better to make it a rather liberal imate.

60304. Well, I daresay there is a point of view m which that is desirable, but there is also the nt of view in which one ought not to increase the imate?—If you add £500 to head number 2 for ssible increases of salaries, and take off £500 for solicitor's branch, it will make the two even.

60305. Then there is the item of interest borrowed money?—The amount the Board ve to pay at present is abnormal. One son is they have not repaid to the Board Works nearly £50,000 which was borrowed the old estates, and therefore they are still pay- interest on that, and they are also paying in- lments as well as interest this year. We are ying £9,000 at the present moment on the Board's imate for the current year.

60306. What is this borrowed money?—It is money rowed with the consent of the Treasury from the ard of Works out of the local loans fund on the urity of the Church Surplus Grant.

60307. For what purpose?—For the improvements estates, and to some small extent for other pur- es, such as Raiffeisen banks, agricultural loans, ns to tenants.

60308. And you are comparing that with the pro- ble indebtedness on borrowing three millions?— , I estimate that, but I know from facts, und o from Mr. Doran's estimates, that if the Board d three millions worth of land in hands it would fair to assume that the amount that the Board uld borrow from the Board of Works under the ent Treasury regulations would be £200,000, that £200,000 would be the enhanced value recoverable the three millions worth of land in hands at any time.

60309. They would be always that amount out of ck for the moment?—Yes, three millions would be the total value of estates in hands at any time, but the £200,000 is the enhanced value up to which the Board could borrow. Under the Treasury rules it cannot borrow more than it will probably recover out of the expenditure. Therefore, I have not assumed that the Board will borrow more than they will probably recover from the tenants on resale, judging by estates that the Board have already bought under this Act.

60310. But what amount do you assume, under those circumstances they would borrow?—£200,000.

60311. Mr. Sutherland.—What would be the necessity for borrowing any additional sum?—While the estate is in hands the Board have to spend a very large sum on the estate, and they have no fund out of which they can pay the expenditure during the interval between purchase and resale. When they resell they can only recover a small portion of the outlay. They lose the balance.

60312. They lose the interest too that they pay for it?—Yes.

60313. Most Rev. Dr. O'Donnell.—If an arrangement could be made by which the Board would be able to draw upon its capital for this purpose it would make a saving, would not it?—In cases of emergency the Board have a statutory right under the Act of 1891 to draw, with the consent of the Treasury, a portion of the Church Surplus Grant of £1,500,000. That would cost in interest 2¾ per cent. When they borrow from the Board of Works it would be 3½.

60314. With the consent of the Treasury there is no legal difficulty?—There is no legal difficulty. It simply depends on the will of the Treasury.

60315. Is not the only difficulty that the capital of the Congested Districts Board is, so to say, used as a guarantee covering the purchase by tenant-purchasers in the Board's area?—Yes. There is a considerable sum now guaranteed.

60316. Sir Antony MacDonnell.—Is not the whole of the sum in the contingent guarantee?—No. It has been taken out of it by the last Act. The only burden on it now is the guarantees that the Board give upon it.

60317. Most Rev. Dr. O'Donnell.—It is no longer in the guarantee fund?—No.

60318. Is not it a fact that the guarantee for the tenant-purchasers is not fixed on the capital alone but on the whole income of the Congested Districts Board?—The Board give the guarantee on the security of the Church Surplus Grant.

60319. Is it on all their funds?—It is on all their funds.

60320. Would not it be a useful inquiry whether it could be shown that it would be sound finance from the Treasury point of view to allow some of that million and a half of money to be used as working capital?—A portion of it no doubt available for an emergency like the present would be very useful, but to borrow any large part of it would perhaps be objectionable, because the Board have given it as security.

60321. You think there is an emergency now that will require special provision?—Yes, a very great emergency. If it were known that the Treasury would not advance this £25,000 the Board should immediately wire Mr. Doran to stop all the work on the estates because the Board would be bankrupt at the end of this month.

60322. And you say if the Treasury saw its way there is no legal prohibition to the use of £25,000 out of the original capital of the Board?—The Act states that it is dependent on the will of the Treasury. It can be done with the consent of the Treasury.

60323. Mr. Sutherland.—It practically amounts to this that your expenditure costs you 2¾ per cent. more than it otherwise would if you did not borrow?—The difference between 2¾ and 3½ per cent.

60324. You always borrow money and pay interest for it, and the interest has to be added to the cost of administration?—Yes. It comes out of the Board's income.

60326. Most Rev. Dr. O'Donnell.—The money borrowed at present costs the Board 3½ per cent. interest. If it were allowed to use as capital any portion of its endowment then that would cost the Board 2¾ per cent. interest?—Yes.

60327. Mr. Bryce.—The security that has been given has been given over the whole of the fund. Therefore there is a technical difficulty in borrowing any of

Jan. 24, 1908

Mr. F. W. D. Mitchell.

it?—When the Act said it was dependent on the will of the Treasury they meant, I suppose, that it was to be considered on its merits; that is, that it was to be considered in relation to the amount of charge on it. The amount of charge on it is comparatively small.

60328. Sir FRANCIS MOWATT.—Is not the necessity for Treasury approval merely to enable the Treasury to prevent you from destroying your own security?—Certainly.

60329. As long as you have got a sum of money, big or little, and give it as security for a loan, big or little, every portion of the former sum becomes pledged to the loan, and neither the Treasury nor anybody else can enable you to withdraw any portion of that money except to the damage of your credit; therefore, when it says that it must be subject to the consent of the Treasury it means that the Treasury——?—It meant that the Treasury had the option.

Sir FRANCIS MOWATT.—The Treasury have it fully before them now.

60330. Most Rev. Dr. O'DONNELL.—I am only anxious to say with reference to Mr. Bryce's point that it seems to be optional with the Treasury under the statute to consider that portion of the capital free which is not required for the purpose of the guarantee. That would allow a discretion?—Yes. Sir Francis appeared to think that if it was given at all as security that would prevent any part of it from being lent; but one section of the Act says with the consent of the Treasury the Board can draw part of the fund, and another section says the Board may borrow from the Board of Works upon the security of this fund. So if it were intended that if the Board borrowed at all under one section they could not employ any portion of the fund under the other——

60331. Sir FRANCIS MOWATT.—This is what the Treasury has power to do, "As may not in the opinion of the Treasury or the Lord Lieutenant be required for the contingent portion of the guarantee fund"?—That is out of it now. That does not apply.

60332. The whole case is now before the Treasury, and without in the least questioning the value of your opinion they will decide it on the law officer's opinion?—Yes, but that is not the only head under which the Treasury could assist the Board. They could give them a loan from the Board of Works.

60333. That I believe the Treasury is considering. There is some doubt about it. For that reason, I think, we should be taking up your time uselessly if we argued it. What is £50,000 floating capital, the next item?—Mr. Doran mentions in that memorandum which he read to you the day before yesterday that there would be in future, as there have been in the past, no doubt, delays in recovering the proceeds of estates on re-sale. There always has been more delay than has been expected, and the Board would require some floating capital to tide them over the interval.

60334. But I see at present they want none?—There is no floating capital now except what the Board can find out of their own funds. They have hitherto been saving, that is by investing money in estates and getting it back gradually they had accumulated a certain amount of floating capital, but it has been insufficient, and at the end of the present year the Board will be about £40,000 to the bad.

60335. This £1,750 represents 3½ per cent. on £50,000?—Yes. Such a loan may not be necessary for this reason. It occurred to me that if Parliament gave the Board a very much larger income, such as could not be all expended the first year, the savings of it during the first year would provide a floating capital.

60336. Mr. SUTHERLAND.—Have you to surrender the savings now?—No.

60337. Is not that a fund for you to have a floating capital?—There is a deficiency at present. There is no surplus.

60338. Don't you contemplate you may have a surplus something like other departments?—No. The Board's work has been increasing too fast for their means.

60339. Most Rev. Dr. O'DONNELL.—You say there might be a surplus the first year?—Yes, if the Government gave the Board a liberal grant during the first year the machinery would not be in order for spending it all.

60340. Mr. SUTHERLAND.—My point is this: under your Act you are not obliged to surrender any surplus?—No.

60341. Have not you got the nucleus of your fu for floating capital?—No; the Board has not be able to save spare capital. It has not been able to p its way.

60342. Have you never had a surplus?—The Boa have had a surplus every year on their estimates. Th never exceed their income, but in order to prevent deficit at the end of the year they have several tim stopped Mr. Doran's work and delayed the work portions of the estates.

60343. Look over the estimates of almost every d partment of the public service and you will see th one year with another there is a large surplus whi they have to surrender to the Treasury?—The Boa is not like other public departments in which the su plus would be surrendered to the Government. T fund is entrusted to the Board to be expended at discretion.

60344. But you have to make a balance every ye and submit it to the Treasury?—That is for t formal sanction of the Treasury.

60345. Sir FRANCIS MOWATT.—The loss on estat you say, is now £11,000—it jumps up to £125,00 what percentage are you counting at?—Mr. Dor wanted £150,000, as you are aware, for the loss on million, but I have had to reduce that by making t adjustment which would follow from his propos that the cost of clerks of works and surveyors inste of being charged to administration should come o of the Board's income. It would come under the he of administration and not that of loss on estates; I have taken off roughly what that would amount from the £150,000.

60346. What does that £125,000 represent in way of percentage?—It is 12½ per cent.

60347. Sir JOHN COLOMB.—That does not agr with the prospective loss estimated by Mr. Dora you put it at 12½?—Yes, but you have to make adjustment for the clerks of works and cost of su veyors.

60348. You start with Mr. Doran's figure of 17 p cent.?—No, I start with 15 per cent.

60349. You start with 2 per cent. less than M Doran before you begin your reductions?—It com down to 15.

CHAIRMAN.—Mr. Doran said 15 per cent.

Mr. KAVANAGH.—15 on the enlarged area.

60356. We are dealing only with the land part the expenditure now. Therefore perhaps you wo tell us on what grounds you raise the expenditure Parish Committees from £12,000 to £20,000?—It i suggestion that has been made that the Congest Districts Board would like to increase the Par Committees from £12,000 to £20,000.

60357. Sir JOHN COLOMB.—Do you mean an incre in the number, or in the grants, or both?—Both.

60358. Most Rev. Dr. O'DONNELL.—It arises in t way, that in a county like Leitrim they are compla ing they have not Parish Committees all over county; also in a county like Kerry, even if you l only at the area which has been scheduled. Does it occur to you that if the area is enlarged there w be some parishes at all events in which the new Bo may establish Parish Committees?—It did occur me, and I thought yesterday when I heard of proposal to schedule Connaught that the Board wo be besieged with applications from twice as m parishes as now get grants, and they would have refuse to listen to most of these applications.

60359. Sir FRANCIS MOWATT.—But of course t is an estimate or proposal for increased work. have no figures which would enable you to test 12 against the 20, except that that is the additio amount which the Board propose to ask for?—Yes. should explain I have no authority whatever for estimate, except that I wish to endeavour to give Commission the means of judging how Mr. Dor proposals would work in with the income.

60364. CHAIRMAN.—You have not made any al ance for agricultural development, of course?— These figures from item No. 7 downwards,* as I h stated, are a very rough guess of my own so as to s gest an inquiry as to what income would cover expenditure.

60365. Mr. BRYCE.—You made no provision fo dustrial development?—Very little, but I have a 50 per cent.; but that is a mere guess.

60366. Most Rev. Dr. O'DONNELL.—If the are so much enlarged it would require a great dea Yes. We had no means of arriving at any de figures.

* See p. 52.

60367. You are aware that in parts of the area om which we took evidence the people alluded to oxford, and said that the Board should try some- ning of that kind in their districts?—Yes.

60368. But without funds that could not be done, f course?—No. When the Board assisted Foxford so berally they had a great deal of ready money. here was £50,000, which formed part of the old shery funds, that was drawn from those funds with ie consent of the Treasury, and we also had savings f income. The work had not overtaken the income, s it did very shortly afterwards.

60369. After that it would have been difficult for ie Congested Districts Board to encourage any such roject?—They have never had the means.

60370. Are not you aware that the Department of griculture has been complaining that the small sum anded over to them by the Congested Districts Board the year did not enable them to do the amount of gricultural work in the districts that they desire?— es, I understood that when they took over from the oard for £2,000 work which had cost the Board 11,000, it was a bargain that they would do that ork, but directly after it was taken over they com- lained that the money was insufficient.

60371. You thought it was understood that there ould not be much diminution in the work?—Yes, I ought that was understood; that they were very nxious to get the work and would do it for £2,000.

60372. Mr. Bryce.—You mean do for £2,000 all at the Board did?—No; they intended to make p the deficiency.

60373. That they would spend on this work £9,000 ore than they got?—Yes.

60374. They did not promise that absolutely?—If ie Board were under the impression that the work hich they had been carrying on at a cost of £11,000 as to be practically extinguished by being reduced to 2,000 they would never have consented.

60375. Most Rev. Dr. O'Donnell.—But latterly the epartment has been expending a great deal more an that sum in these areas?—Yes. I believe that ey are expending up to £10,000.

60376. You are aware that they expect that for the rpose of relieving congestion a good deal of that oney should be provided?—Of course it is a fact at their income did not include money for the con- sted districts, and Parliament should have given em a further grant.

60377. Mr. Kavanagh.—Their income was based on e assumption that they would not have the con- sted districts?—Yes.

60378. They were actually excluded from them?— s, but they accepted a transfer of the work before they got the income from Parliament. That is really the position.

60379. Mr. Sutherland.—Does not there seem a disproportion between the amount spent on general industries and fishing?—Do you think that £3,000 is an adequate expenditure on the fisheries of Ireland?—Taking last year, which was normal, the gross expenditure on fishing was £40,000, that is for expenditure direct and indirect for the benefit of fisheries—for instruction in fishery, providing piers, new boats, and making loans. They recovered £26.000 out of the £40,000. Therefore the net expenditure, direct and indirect, is £14,000.

60380. Most Rev. Dr. O'Donnell.—Don't you think we have had sufficient indication at the Congested Districts Board that in developing the fisheries a much bigger sum than you have contemplated would be required annually?—I think that more piers are required at a good many places around the coast. The Board have always had a large number of cases of marine works that have been asked for and inquired into, but which they are unable to execute.

60381. Would not you want officers, practical fishermen, who will have the confidence of the people and know their business, stationed at various parts of the coast?—There should be more officers, and the Board ought to spend more on piers, and perhaps more on boats. The money available for new boats has been too limited.

60382. Sir John Colomb.—In some cases the Board gave bounties in some form or another for accelerating communication?—For steamer services the Board are now paying £3,900.

60383. Does the steamer service include subsidies for means of communication and the maintenance of the *Granuaile*?—Yes. There are only two subsidies at present.

60384. Do you leave that at the same figure, although you are going to deal with a very much larger area?—Yes, the Board have withdrawn their subsidies and I have heard of no intention of renewing them. Of course if the Board had means very likely they would do so.

60385. The £3,900 includes the cost of the Granuaile, and all such subsidies?—Yes. The net cost of the Granuaile is £3,000 and there is an additional £900, which makes up a total of £3,900 at present.

60386. You took it as settled that the Board were not going to subsidise any more?—I had no reason to suppose that the Board would revive subsidies which have ceased. I am sorry to say that these figures, as you understand, were made up rather hastily. I had to wait until Mr. Doran's programme was out, and then I had to do it in haste.

The Commission adjourned.

APPENDIX I.

DOCUMENTS PUT IN BY MR. DORAN IN CONNECTION WITH THE EVIDENCE GIVEN BY HIM BEFORE THE COMMISSION.

A.—NOTES OF EVIDENCE.

Mr. Callan having informed me that the Commission desired to obtain some further evidence from me as to the probable loss that would be incurred in dealing with estates which needed treatment in the counties containing Congested Districts, I have prepared particulars of the actual loss incurred by the Board in the treatment of estates purchased under the Irish Land Act, 1903, and which since then have either been sold or are now ready for sale. They are classified as follows:—

Class A.—Poor tenanted estates on some of which there was a certain proportion of untenanted agricultural land available for migration and the enlargement of small holdings.

Class B.—Very poor tenanted estates on which there was practically no agricultural land available for migration and enlargement of holdings, and upon which the improvements effected were mainly re-arrangement of the holdings, improvement of buildings, road-making, and drainage.

Class C.—Migration estates comprised wholly or mainly of untenanted land used chiefly for migration.

The total purchase price of estates A, B, and C is £317,639, and the total amount spent in improvement works is £81,249, and the total net loss £41,152. The total poor law valuation is £12,457, and the total area is 53,627 acres, of which 10,558 acres were untenanted, and 43,069 acres were tenanted. Of the untenanted land about one-half is turbary, bog, mountain, and waste, having a poor law valuation of about one shilling an acre.

Class A comprises 76·1 per cent. of gross purchase money.

Class B comprises 15·6 per cent. of gross purchase money.

Class C comprises 8·3 per cent. of gross purchase money.

The percentage of loss in the treatment of the estates was as follows:—

Class A, ...	9·4
Class B, ...	21·6
Class C, ...	28·8

and the average loss on A, B, and C together was 12·9 per cent.

As already stated, the estates A and B comprise 91·7 per cent. of the gross cost price, and the untenanted land, Class C, was only 8·3 per cent. of the gross. The value of the untenanted land in A, B, C, including turbary, bog, and mountain, is about 28 per cent. of the entire; but, as will be seen on reference to the summary of A, B, C, this amount of untenanted land was altogether insufficient to bring the holdings to an average of £10 rateable value, as there are 1,770 holdings on the estates, the gross rateable value of which is £12,457.

If, as recommended in my evidence, the estates dealt with each year by the Board should comprise two-thirds tenanted and one-third untenanted land, the loss if calculated for one-third untenanted in the same proportion as it has actually been on the 8·3 per cent. on the gross, would make the loss on the entire group of estates, comprising two-thirds tenanted and one-third untenanted, work out at about 14 per cent., but if all the holdings were to be raised to even an average rateable value of £10 much more untenanted land should be provided, and the loss would then exceed 18 per cent.

I consider that these figures based on actual facts afford te best available guide to what the minimum loss might be in dealing in a similar manner with estates needing treatment in the counties containing congested districts.

I may observe that the tenants of the estates in these groups all paid at least two years' full rent, and that the untenanted land was sold at the average price at which all the untenanted land purchased by the Board cost, namely—twenty-seven years' purchase of the estimated fair annual value, consequently in making an estimate of the average loss in future transactions on the basis indicated by these figures, *i.e.*, 14 per cent., it is very important to bear in mind that if the untenanted lands are not purchased at the prices at which they can be sold at on an average a further loss will be entailed in excess of the 14 per cent.

Most of the holdings on the estates in Class A have not been enlarged to any appreciable extent, and, on sale, were largely composed of uneconomic holdings, 74 per cent. of them being under £10 rateable value. The chief improvements effected through the loss of 9·4 per cent., being the re-arrangement of scattered or rundale holdings, improvement of dwellings, construction of drains, fences and roads. Although these estates have been appreciably benefited by the Board's treatment, the results cannot be considered satisfactory while a large proportion of the holdings disposed of were uneconomic.

Class B comprised poorer estates than those in Class A. A larger number of the holdings needed re-arrangement, and where, as a rule, owing to the poor character of the land, the works carried out in connection with re-arrangement, drainage, and road-making were not considered to be sufficiently directly reproductive to charge any appreciable portion of the outlay to the sale prices of the holdings; consequently a large percentage of loss has occurred with results that are even less satisfactory than in case of the holdings comprised in Class A. Eighty-three per cent. of the holdings sold were under £10 rateable value.

The estates included in Classes A and B may be taken as fair types of poor estates in congested districts, but it will be observed that the proportion of Class B, which comprises very poor estates, is small compared with Class A.

The estates in Class C are almost entirely untenanted estates used for migration, and form only 8·3 per cent. of the gross value.

In considering the suggestion to fix a percentage of loss which the Board may incur in dealing with the year's output of estates, it is of importance to study the proportions which the values of Classes A, B, and C respectively bear to the gross value of the three classes grouped together, for it is manifest that if the Board are limited to an average percentage of loss in the year's output, they must arrange to group for treatment the Classes A, B, and C in such proportions as will bring out the average percentage of loss allowed.

To illustrate this, if they confined themselves during the year to dealing with estates Class A, these would involve an average loss of 9·4 per cent. If, on the other hand, they deal only with the poorest estates, Class B, the loss will be 21·6 per cent.; and, if they confine themselves solely to migration, the loss would be at least 30 per cent.; so that, in fixing the average net loss to be incurred on estates dealt with in the year, it would always be necessary to so arrange the proportions of the different classes sold each year as would bring out the average loss at the percentage allowed. I have endeavoured to do this as far as possible with the limited opportunities for grouping the estates that the small extent of purchases by the Board hitherto offorded.

An examination of the past records of the Board's work, as well as a reference to the estates now classed under B, make it clear that the poor and less resourceful estates cannot be dealt with with a less loss than 20 per cent. of the cost price. On a few of these estates the loss even exceeded 100 per cent. of the cost price.

It may be taken for certain that extensive migration of small landholders cannot be safely carried out at a less loss than 30 per cent. of the cost price of the land, and this on the assumption that the land *can be sold to migrants* at the price paid for it.

The average price paid by the Board for all untenanted land acquired was, as given in my evidence 27 years' purchase of an estimated fair rent, the

annuity on which would be equivalent to 12½ per cent. reduction in the rent. In my opinion, the annuity of a migrant's holding ought not at the outside exceed 85 per cent. of the estimated fair letting value of the holding, including buildings, and even this rate seems rather too small a margin of security for the payment of the annuity for such a long period as 68½ years, and I would much prefer if it was possible to finance it, so that the annuity of the holding should not exceed 85 per cent. of the fair rent of the land, excluding the buildings. It would be quite possible to do this if migrants could be found who would surrender fairly substantial holdings, for the occupation interest in the holdings they surrender would in all cases be deducted from the cost price of the land in the new holding; but in the case of small holdings this occupation interest is not sufficient to cover the sum added to the value of the land in respect of the necessary buildings erected upon it. So that if the Board continue to acquire untenanted land at twenty-seven years' purchase of an estimated fair rent, and if the migrants to these lands are persons who surrender very small holdings, it will not be possible to let them have the new holdings at an annuity representing 85 per cent. of the fair rent of the land alone without incurring a larger loss than 30 per cent.

I should also point out that it appears probable that the Board will seek to acquire a much larger proportion of non-residential tenanted holdings than they have hitherto acquired, and if they are obliged to pay more for such holdings than for land in the owner's possession they will be unable to sell the new holdings created out of such land at annuities which do not exceed 85 per cent. of the fair rent without incurring a much larger loss than 30 per cent. on the cost price of the land alone of the migrants' holdings. Personally I see no reason why a larger price should be paid for land jointly owned by two persons (tenant and landlord) than if it was occupied by only one of these persons.

I submit a list showing the prices paid by the Board for a number of tenanted holdings which they acquired, classified as follows:—

First Term Tenants.—Acquired by voluntary agreement without initiation of any legal proceedings.

First Term Tenants.—Acquired by pre-emption proceedings.

First Term Tenants.—Acquired by resumption proceedings.

Second Term Tenants.—Acquired by voluntary agreement without initiation of any legal proceedings.

Second Term Tenants.—Acquired by pre-emption proceedings.

Second Term Tenants.—Acquired by resumption proceedings.

Future Tenancies.—Acquired by Notices to Quit.

In some of these cases the Board acquired the land by voluntary agreement without initiating any legal proceedings. In other cases on receipt of notice from tenants of their intention to sell at a price named, the Board serve notice to pre-empt, and in several cases were advised to pay the excessive prices offered, when after making inquiries they were satisfied that the intending purchaser was a *bona-fide* one and desired to carry out the bargain. The Board served notices to resume possession of several holdings, and the prices paid were in most cases settled by agreement before the hearing of the case by the Land Commission. In a few cases the prices were fixed by the Land Commission after hearing all parties. In many cases notices to quit were served to determine future tenancies, and the prices paid were in accordance with the scale laid down by the Act.

In proof that migration cannot be safely carried out at a less loss than 30 per cent., I submit the following particulars:—

£15 holding at 27 years' purchase, .	£405
Cost of buildings, ...	130
Roads, ...	20
Fences, ...	20
Total cost of holding, . . .	£575
Sale price of holding if the annuity be £12 15*s.* 0*d.*, that is 85 per cent. of the annual value of the land alone, .	£393
Loss, ...	£181, less by the occupation interest of the surrendered holding.

APPENDIX I.

1. If the occupation interest of the surrendered holding were only £35 (which was the average value of the occupation interest of the first 207 migrants dealt with) the loss would be £146 per holding, equal to 36 per cent. of the cost price of the land alone. This loss, in the case of the 207 migrants referred to, would have been 37·3 if the buildings had cost £130, and the roads and fences £40, but in these cases the average expenditure per holding on the buildings was £108, fences £20, and the roads and other improvements, £16—that is an expenditure per holding of £26 less than the amount given above.

The fee-simple of the land in the 207 migrants' holdings referred to in the Fourteenth Annual Report (page 121) cost £66,452, which would be an average cost of £321 for the land. The migrants dealt with in the succeeding year, as given in the Fifteenth Report (page 132), involved a loss of £87 per holding (page 13).

2. If the occupation interest of the surrendered holding were £50, the loss would be £181 less £50, equal to £131, or 32·3 per cent. loss on the cost price of the land (£405).

3. If the occupation interest of the surrendered holding were £85, the loss would be £181, less by £85, equal to £96, or 23·7 per cent. loss on the cost price of the land alone (£405).

If the migrant's annuity was to be kept at 85 per cent. of the fair rent of the new holding, including buildings, I would say a fair rent for such buildings as we erect on a £15 holding would be £2, making the gross fair rent £17 (which, multiplied by 26¼, would leave the gross price of the holding £446, and the annuity of this would be £14 10*s.*). Fifteen per cent. off the gross rent of £17 would leave £14 9*s.*, which would repay an advance of £445, and the loss in the cases cited would be reduced to the following:—

For case 1, the loss would be £94, equal to 23·2 per cent. on the cost price of the land alone (£405).

For case 2, the loss would be £79, equal to 19·5 per cent. on the cost price of the land alone.

For case 3, the loss would be £44, equal to 10·0 per cent. on the cost price of the land alone.

If the annual grant to be made to the Board for the improvement of estates is to be based on an average net loss, it will be necessary to leave the Board free to exercise reasonable discretion in the selection and grouping together for each year, of estates that will involve a large loss, a small loss, and an intermediate loss, and it will rest with the Board to exclude from purchase estates or portions of estates which they consider may be sold without special treatment.

Take the percentage of loss incurred in the treatment of the estates purchased and prepared for sale under the Act of 1903, which may be stated in round figures as:—

9 per cent. loss on A.—Tenanted estates which comprised 76 per cent. of the entire value of all the estates dealt with.

20 per cent. on B.—Tenanted estates which comprised 15½ per cent. of all the estates dealt with.

30 per cent. on C.—Untenanted lands which comprised 8½ per cent. of all the estates dealt with.

If the Board dealt with one-third of a million worth of untenanted (C) lands, it would be 30 per cent. of a loss on £333,333, equal, . .	£100,000
If ten per cent. of the tenanted lands were B Class necessitating a loss of 20 per cent., that is 20 per cent. on £100,000, . . .	£20,000
Total, . . .	£120,000

so that if the average loss permitted on one million's worth of property 33 per cent. of C. and 10 per cent. would make up £120,000, and 57 per cent of the tenanted estates should be dealt with without loss.

It will, I think, be admitted that the class of estates most in need of attention are the poorest tenanted estates, and the untenanted land, and the loss on those would be at least 20 per cent. and 30 per cent. respectively, while it would not be possible for the Board to pass through their hands such a large proportion as 57 per cent. of the estates dealt with each year without incurring a loss. For these reasons with others I consider that *at least* 15 *per cent.* should be allowed on each million's worth of land dealt with, and for the purposes of an estimate the

APPENDIX I.

proposed fifteen per cent. loss might be apportioned as follows:—

33% of C. = £333,333 @ 30 per cent. loss,		£100,000
10% of B. = £100,000 @ 20 per cent. loss,		£20,000
57% of A. = £566,667 @ 5·3 per cent. loss,		£30,000
	£1,000,000	£150,000

It is doubtful that it will be possible to deal with 57 per cent. of estates at the small loss of 5·3 per cent., but it is certain that classes B and C cannot be satisfactorily dealt with for a less loss than 20 and 30 per cent. respectively.

In practice it will not be possible for the Board to preserve the above proportions of A, B, and C estates. They may have in any year a smaller proportion of untenanted land and a larger proportion of bad estates that they should deal with. Having regard to these difficulties, I have come to the conclusion that the proposal to fix the grant to be given to the Board at a percentage of the value of estates sold each year is objectionable, and that it would be preferable to have an annual grant placed at the Board's disposal to be applied at the Board's discretion to meet the loss incurred in the treatment of estates purchased by them subject to the general understanding that they would sell each year aboout one million's worth of estates. The Board must be trusted to exercise discrimination in the selection of estates for purchase, and to avoid the purchase of any estates that they are not justified in buying; for if they do not do this and that their output be confined to estates worth one million a year, the length of time which would be required to deal with all unsold properties in the counties containing congested districts would be very long. I anticipate that there will be very great dissatisfaction at the delay necessarily incured in the transfer of the ownership of holdings on poor estates in the counties containing congested districts when the output is confined to one million a year, and it occurs to me that legislation should provide for dealing, if necessary, with a larger output of estates needing treatment when and if the owners willing to sell and the tenants willing to buy are in excess of the million a year.

The untenanted lands dealt with were sold at the prices paid for them. The tenanted estates paid at least two years' full rent, and some of them three. It is hardly necessary to point out that a similar class of estates cannot be similarly dealt with at the same loss if the untenanted land is not purchased at a price at which it can be sold, or if the revenue from the lands while on hands be substantially reduced. I may, however, point out that the loss on the estates purchased under the Act of 1903 include cost of surveyors, paymasters, and clerks of works, which ought properly be charged to administration, and is in future to be so charged. I am informed that the Estates Commissioners do not charge to any estate the cost of surveying, valuing, management, or engineering expenses. In fact none of the expenses incidental to the supervision of the improvement of estates except the wages of gangers who superintend the workmen.

The cost of valuing the untenanted land purchased by the Board has not been charged to the estates, as all this work was done by me and two valuers on the permanent staff.

If the entire of the counties containing congested districts be placed under the control of the Board, and that compulsory powers be given to acquire, as recommended in my evidence, non-residential holdings, and portions of residential holdings exceeding a specified valuation; and also tenanted estates for the purchase of which terms could not be voluntarily arranged, I think it of the greatest importance that in the case of untenanted land, and lands not held under judicial rents, it should be the duty of the rent-fixing department of the Land Commission, at the request of the Board, to assess on such lands a rent equivalent to a second term rent for a sitting tenant.

As the purchase and sale prices of tenanted lands are now usually arranged on the basis of second term judicial rents fixed by the Land Commission, it seems very advisable that the same body should assess the estimated fair rent of untenanted land sought to be purchased by the Board, as it is upon that standard of value the land must be subsequently disposed of. For the same reason it appears advisable that in the case of holdings on tenanted estates which are subject to non-judicial rents, that the rent-fixing body of the Land Commission should value these holdings so as to furnish the Board with an estimate of a second term rent or its equivalent.

The same procedure might be followed in making the valuation as at present under Form 49, Act 1896, when the landlord and tenant serve upon the Land Commission a joint application to have a fair rent fixed. In pursuance of this procedure in the case of tenanted holdings a representative of the tenant and landlord would both accompany the Sub-Commissioners over the holdings, who would subsequently furnish what is known as the "Pink Schedule," giving the gross estimate of a fair rent, with such deduction therefrom (if any) in respect of improvement effected upon the tenanted holding which the landlord's representative admitted. If there were improvements of substantial value claimed by a tenant and not admitted by the landlord's representative, they should be set out in a separate schedule. In the case of untenanted land there would, of course, be no deduction in respect of improvements, as the land was in the sole occupation of the landlord.

With a view to securing uniformity of price, it is suggested that the most experienced of the staff of the rent-fixing department of the Land Commission be nominated for this particular work of the valuation of land sought to be acquired both by the Congested Districts Board and by the Estates Commissioners. These men should be engaged for at least three months of each year in fixing judicial rents so as to keep them in close touch with the actual rent fixation.

In the case of untenanted land, I suggest that it should be made the duty of the Land Commission on the requisition of the Board in manner to be prescribed, to cause a detailed valuation to be made of land sought to be acquired equivalent to second term rent for a sitting tenant. At the same time the Board would request the vendors to furnish particulars of his net income, with proofs of the figures supplied, in the form of regularly-kept books or production of contracts of temporary lettings. The Board, having subsequently before them for their consideration the equivalent of a second term fair rent as furnished by the Land Commission (which must be taken as the basis for the disposal of the land), and also particulars of the net income derived from the land by the owner for a specified period, would make an offer to the owner. If the vendor and the Congested Districts Board failed to come to terms, the Board would, if they so desired, serve a notice upon the owner and also upon the Land Commission requiring the latter to fix the price which the Board would pay for the land. This procedure is similar to that now in force under which the Board may serve a tenant on their estate, holding under a judicial tenancy, with notice to resume possession at such price as the Land Commission may fix after hearing the evidence of both parties.

As the Land Commission is the statutory body appointed for the fixing of rents, and as a second term rent is now accepted both by tenant and landlord as the standard of annual value in fixing the number of years' purchase to be paid, I maintain that the rent-fixing department of the Land Commission is the proper body to assess the equivalent of a fair rent.

It is obvious, I submit, that no valuers except those included in the statutory rent-fixing body, and actually engaged at the fixing of rents, are capable of authoritatively fixing a judicial rent, or stating its equivalent. Whether it is too high or too low a rent it is the statutory rent, fixed in the same manner as the bulk of the second term rents accepted throughout the country as the standard for basing the purchase prices of holdings. Even though unofficial valuers should happen to fix substantially the same rents, their valuation would not have the same authority, as their assessment of a fair rent has necessarily to be based on what their individual conception is of the rent which would be fixed on a particular holding or area of land by the statutory body.

I can see no reason why this important public duty when discharged by the Land Commission should be charged to the Board's expenses no more than the services of the Land Commissioners would be charged when they are called upon by the Board at present to exercise their functions of fixing fair rents on the Board's estates, or fixing the resumption price to be paid for holdings which the Board seek to take up under Section 83 of the Act of 1903. The Board have power to obtain the statutory decision of the Sub-Commissioners in relation to these

matters under the existing law without defraying any of the expenses. For the same reason I submit that it should be made a part of the duty of the Land Commission to assess a fair rent or its equivalent on all lands which the Board may request them to fix the rent upon by the service of notice such as is now served when the Land Commission is required to fix a fair rent on any holding held under a present tenancy.

H. DORAN.

B.—MEMORANDUM ON "VESTED CONGESTION."

According to the figures given by Mr. Callan,* about half the holdings in the counties containing congested districts have been either sold, or agreements for sale have been lodged with the Land Commission in respect of them.

It appears to be generally admitted that a considerable number of the holdings already sold are uneconomic, that many of them require re-arrangement and consolidation, and that a number are non-residential holdings which might have been utilized for the enlargement of adjacent small residential holdings.

In view of these facts it will be necessary to give the Board power to apply their remedial measures for the relief of congestion over the entire of the counties placed under their control, irrespective of whether the holdings are occupied by tenant-purchasers, ordinary tenants, leaseholders, or the owners in fee.

When over one-half in number of the tenant-purchasers occupying holdings under £10 rateable value in any townland apply to the Board to re-arrange, improve, or, where possible, enlarge their holdings by the addition of adjacent lands which the Board may be empowered to acquire, the Board may group such holdings and declare them to be an estate of "vested congestion," redeem the purchase annuities, and deal with it as they would with any estate purchased from the landlord.

On the declaration by the Board of any such estate comprising "vested congestion" they shall redeem the outstanding balances of the advances made in respect of each holding, and the relation of tenant and landlord shall be established with all the incidents of judicial holdings between the Board and the occupiers at abated rents equal to their annuities, pending re-sale of the improved or altered holdings, and subject to the condition that on re-sale the price to be charged for that proportion of the new holding which represents the value of the old holding shall be the outstanding balance of the advance in respect of the old holding.

Any additional land in excess of the value of the old holding given in the new holding shall be sold at such price as the occupier of the new holding and the Board may agree, and any advances for buildings or such other improvements as may first be arranged between the occupier and the Board, and provided for in a written agreement, may be added to the sale price of the new or re-arranged holding. In the absence of such agreement, the new or re-arranged holding of equivalent value to the old must be re-vested subject to the same annuity as before.

H. DORAN.

C.—MEMORANDUM ON MAINTENANCE OF ARTERIAL AND MAIN DRAINS, AND OF ACCOMMODATION ROADS CONSTRUCTED BY THE CONGESTED DISTRICTS BOARD.

Drains.

In the absence of a Public Works Department to undertake the general management and control of arterial and main drainage schemes for the entire of Ireland, as suggested in my evidence before the Arterial Drainage Commissioners, Ireland, 1905, I submit the following suggestions for the maintenance of drains constructed by the Congested Districts Board.

The Board shall prepare a map, with schedule, showing the holdings or portions of holdings improved by their drainage operations. The area so improved in each catchment area to be coloured blue on map, and defined as the drainage district liable to assessment for the maintenance of the drainage system within the catchment area. On schedules accompanying the maps shall be given the name of the rated occupier of each holding, the area improved in each holding by drainage, and also the proportion in which the occupier is to contribute to the cost of maintenance.

The maps, with schedule, for each drainage district are to be deposited with the secretary of the County Council, or County Councils, for the county in which the drainage district is situate, and the County Council shall direct their county surveyor to undertake the duty of providing that the drainage system shall be maintained in an efficient condition.

He shall prepare every year specifications of the work required to be done, and the District Council should invite tenders for the execution of the work in such sections as they may decide. Tenders to be dealt with by them in the same manner as tenders for the maintenance of roads, and the amount required to meet the cost shall be assessed on the lands within the drainage district, and collected with the poor rate in the same manner as assessments now are for malicious injuries or separate charges. The persons liable for the assessment may, by arrangement amongst themselves, nominate one or more of their body to contract to carry out the work for a nominal sum, or for any sum not exceeding the amount estimated by the county surveyor.

Accommodation Roads.

Accommodation roads are usually of two classes:—

(*a*). A road made from a public road to a village or townland for the sole accommodation of the landholders in the townland or townlands through which the road passes.

(*b*.) Road to a bog which may accommodate a number of persons living on and occupying holdings one or more miles distant, but having turbary on the bog, and requiring the road for access thereto.

(*a*.) In these cases the Board shall lodge with the secretary of the County Council a map, showing the road to be maintained and the holdings of the rated occupiers who use the road.

The County Council shall accept a transfer, free of charge, of the road and make it county property, and instruct the county surveyor to place it on the list of roads for permanent maintenance.

He is to invite tenders for one or a period of years in the ordinary way, and the cost of maintenance is to be assessed against the rated occupiers of the holdings accommodated by the road in the proportion that rateable value of each of the holdings accommodated bears to the annual cost.

The persons liable for such assessment may nominate a person or persons to contract to maintain the road in accordance with the county surveyor's specifications, at a nominal sum, or any sum not exceeding the county surveyor's estimate.

(*b*.) Bog roads.

The Board shall lodge with the secretary of the County Council of the county in which the bog road is situate a map, showing site of road, and this map is to be accompanied by a schedule, giving the names, townlands, and poor law valuation of the rated occupiers who use the bog road as a means of access to their turbary supplies, and who are to be liable each for equal parts of the cost of maintenance of the road.

The county surveyor shall arrange for a contract for maintenance, as in the case of (*a*) roads above described.

* See p. 11, q. 59,522.

APPENDIX I.

If it should be decided that the Congested Districts Board's operations were to continue, and that the area under their control was extended to the entire of the counties containing congested districts, it may be considered more feasible to place upon the new Board the duty of securing the maintenance of all roads and drains made by them or their predecessors, instead of requiring the county authorities to undertake such duties. In this event the Congested Districts Board should have the same power of assessment and recovery of the outlay made, as above suggested for the county authorities. Another, and perhaps a more practicable mode of procedure would be:—

1. That the Board would put into what they consider to be a reasonable state of repair all roads and drains constructed by the Board.

2. That they would be empowered by law to schedule the holdings, the occupiers of which would be liable for the maintenance of each of the roads and of the drains, or portions thereof.

3. That they would subsequently, by notice in prescribed form, call upon the landholders liable for the maintenance of each road or drain, to name two or three trustees who would undertake to supervise and be responsible for the maintenance, such persons to have power to call upon all persons liable to assist in putting the road or drain in a proper state of repair at specified times, and in the event of their failure to do so, the trustees would employ other persons to do the work, and have summary powers to recover the cost of same at the local petty sessions court from the occupiers of the holdings who use the road or whose lands are benefited by the drainage.

This procedure would, of course, involve the settlement of a considerable amount of detail, which I do not consider it necessary to enter into here.

H. DORAN.

Pre-emption of Holdings.

The Congested Districts Board to be empowered to pre-empt all holdings offered for sale in the counties containing congested districts after 1st January, 1909, and no such sale to be valid after that date unless with the assent of the Congested Districts Board.

The price to be paid by the Board to be fixed by agreement, or failing agreement, by the tribunal appointed to fix the value of estates to be compulsorily purchased.

In the event of the Board ascertaining that a holding has come into possession of a new occupier in contravention of this enactment, they may serve notice upon the occupier to compulsorily acquire the holding, and thereupon the same procedure shall apply as may be arranged for the compulsory acquisition of holdings.

This to apply to sales by mortgagee or any covert form of alienation, including any case in which a mortgagee goes into possession of a holding.

H. DORAN.

NOTE.—The foregoing proposals would appear to meet cases of shopkeepers giving credit to a landholder with the object of acquiring the holding.—H.D.

APPENDIX III

APPENDIX III.

DOCUMENT put in by Mr. F. W. D. MITCHELL in connection with his Evidence before the Commission.

A.—TABLE showing Appropriation of Board's Income—Present and Proposed.

Services.		Present.	Proposed.
		£	£
Administrative Expenses for Estate business.	Outdoor Staff and Expenses,	9,900*	32,800*
	Indoor Staff and Office Maintenance,	12,100	26,700
	Law Staff and Expenses,	3,000	6,500
		25,000	66,000
4. General Administration,		11,000	12,000
5. Interest on Borrowed Money, say £100,000 at present and £200,000 in future,		3,500	7,000
6. Interest on £50,000 Floating Capital		—	1,750
7. Loss on Estates,		11,000	150,000
8. Industrial Classes, &c.,		9,000	15,000
9. Fisheries and Instruction,		3,000‡	7,000
10. Parish Committees,		12,000	20,000
11. Steamer Services,		3,700	3,700
12. Piers and Roads,		5,750	10,000
13. Agriculture—Contribution of £2,000 to Department of Agriculture, Grants to Shows, &c.,		2,300	†
		£86,250	£292,450

* The cost of Clerks of Works, Surveyors, Paymasters, Stock-managers, Bailiffs, and Herds is not included in the cost of out-door staff given above as hitherto ; the salaries and expenses of these officers have been charged against the individual estates, not against administration.

† I am not in a position to make any estimate of the increase necessary under this head. F. W. D. M.

‡ In addition to the above expenditure out of income about £8,000 per annum is issued in loans to fishermen from the Irish Reproduction Loan Fund and the Sea and Coast Fisheries Fund. The repayments annually amount to about the same sum.

N.B.—Items 1-3 and 5-7 are all part of the cost of land re-settlement. The increases proposed have been estimated by Mr. Doran. Items 5 and 6 represent interest charges on money spent on improvements on estates, but ultimately repayable as enhanced price, money required for stocking grass lands in Board's hands, and for loans, &c.

B.—TABLES SHOWING EXPENDITURE ON SCHEMES UNDERTAKEN BY THE BOARD

* Includes about £1,560 Interest.
† Total sum still payable to Board, including Interest.
‡ Includes about £650 Interest.
§ £131 Bad Debts written off.

APPENDIX IV.

Documents and Statistics Submitted by the Secretary of the Commission.

A.—Memorandum and Statistics relating to Amount of Crops Grown and Cattle Carried on Different Classes of Holdings.

Tables XIII. to XVI. in the following return (pages 70–87) were collected for the Commission by the Department of Agriculture in connection with the Annual Agricultural Statistics, and Tables I.–XII. (pages 56-69) were prepared in the Office of the Commission. Tables XIII. and XV. contain information, by counties, as to the number of acres under various crops and as to the number of various classes of cattle, not only on the total number of holdings in each county (as do the Annual Agricultural Statistics), but also the total for each of six classes of holdings (arranged according to acreage) in each county. Tables XIV. and XVI translate these absolute figures into percentages.

The importance of this return is that it renders it possible to compare with statistical precision the amount of tillage and the number of cattle carried on small and large farms respectively. Owing to lack of such information it has not been hitherto possible to compare statistically the working of different sizes of holdings. One instance will suffice to illustrate the point. Irish economists have often sought in vain (*cf.* Ireland : Industrial and Agricultural, page 318–9, and the Report of the late Dr. Coyne on the Agricultural Statistics of Ireland for 1902, Cd. 1614–1903, p. xxv.) to get information as to the exact number of acres occupied by different classes of holdings in Ireland (classified according to acreage). As special information had been collected as to the acreage under each crop in each of six classes of holdings, it was rendered easy to obtain the total acreage by cross summation, and accordingly this is given in the second column of Tables XIII–XV.

As these Tables are necessarily somewhat detailed, summary Tables indicating some of the most important points were prepared in the Office of the Commission. In Tables I. to III. (pages 56–61) and in Table VII. to IX. (page 68) a contrast is drawn between the holdings under and over 50 acres in the counties with which the Commission are mainly concerned, but in Tables I. to III. the figures are also given for the whole of Ireland. As regards the smaller area, it appears that 84 per cent. of the holdings are under 50 acres, but these occupy only 44·5 per cent. of the total area, though they carry 59·6 per cent. of the total number of cattle. On the holdings under 50 acres there are about two-thirds of the total number of milch cows and of the total number of cattle under two years old, whilst the larger holdings carry about two-thirds of the total number of bulls and of the cattle two years old and upwards. Making no distinction between the different classes of cattle, there are 3 acres for each head of cattle on the small farms, and 5·6 acres on the large farms. The percentage of the land that is under corn crops on the small holdings is 6·9 per cent. and on the large holdings 2·3 per cent. The percentage under potatoes on the two classes of holdings is respectively 5·6 and 1·2, and under other green crops 2·2 and ·9. Similarly the percentage of the area under first, second, and third years' hay, pasture under rotation and under permanent meadow is much larger on the small holdings than on the large, and the percentage under permanent pasture is slightly larger on the small holdings. On the other hand, the mountain land grazed on the small holdings is under 10 per cent of the total area, and on the large holdings it is 34 per cent. Consequently in drawing any comparison between the utilisation of the land on the two classes of holdings it is important to bear in mind the fact that whereas under one-tenth of the small holdings is occupied by rough mountain grazing over one-third of the large holdings is so occupied. It may be noted that the percentages of the mountain land grazed forms of the total area are much smaller when the whole of Ireland is taken, being 5 per cent. and 18 per cent. respectively.

Tables IV. to VI. (pages 62–7) contain a summary for the counties of Donegal, Galway, Leitrim, Mayo, Roscommon, Sligo, Clare and Kerry, and for the whole of Ireland of the salient features of the returns made out for three classes of holdings, namely, those under 30 acres, those between 30 and 200 acres and those exceeding 200, whilst Tables X. to XII. (page 69) contain a summary of the same results for the total of the eight counties mentioned. Some of the results indicated are undoubtedly striking. Thus the smallest class of holdings, though they form 70 per cent. of the total number, occupy less than 30 per cent. of the total area. They, however, carry over 41 per cent. of the total number of cattle. The largest class of holdings forming 2·2 per cent. of the total number of holdings occupy 23·2 per cent. of the area and carry 9·6 per cent. of the cattle, and there is for each head of cattle on these large farms 9·9 acres as against 2·9 acres on the small holdings. In drawing any deduction, however, as to the comparative efficiency of the largest and the smallest holding it must be remembered that the cattle on the small holdings are mainly milch cows and young stock, whilst the cattle on the larger holdings consist mainly of stores. Again, it must be borne in mind that over half the area of the large holdings is returned as mountain land grazed, whilst only one-twelfth of the small holdings is so returned. After making allowance for this factor it is still worthy of note that a quarter of the land occupied by holdings under 30 acres is in course of going under the plough, that is, it is under crops or hay or pasture under rotation, whereas little more than one-twentieth of the total area of the largest holdings is so occupied.

WALTER CALLAN

Secretary.

20th March, 1908.

L—TABLE showing, as regards holdings (*a*) over and (*b*) under 50 acres, the number of such holdings; the area area occupied by each class of crops is of

APPENDIX IV.

B.—Table showing the Number of various classes of Agricultural Holdings in Ireland in 1841 and certain subsequent years.

The earliest official statistics relating to the number of various-sized holdings in each county are those contained in the Census of 1841.

Similar figures were given in the Census Returns of 1851. Between these two dates the annual collection of Agricultural Statistics was started, and these figures are available for 1847 and each subsequent year. The figures given below are taken from the Census Returns of 1841 and 1851 and the Agricultural Statistics for 1847, 1857, 1867, 1877, 1887, 1897, and 1906. These figures were all collected on the same basis and are therefore comparable; they include many holdings not strictly agricultural.

No statistics relating to holdings were collected for the Census in 1861 and 1871, as they were regarded as unnecessary, in view of the fact that the agricultural statistics were annually collected. During the Census of 1881 the collection of statistics relating to holdings was resumed, but on a new basis, and a different interpretation placed upon the word "holdings" (see explanatory note, page vii., in the prefatory note to the statistics contained in the second appendix to the Seventh Report of the Commission). To put the matter briefly, the Census figures relate to landholders and not to holdings; the Agricultural Statistics relate to holdings and include many that are not agricultural. The result is that the figures given in the Agricultural Statistics are, roughly, 20 per cent. greater than those given in the Census Returns since 1881.

WALTER CALLAN,

Secretary.

4th April, 1908.

1.—Table showing, as regards Holdings under 1 acre in extent, the number of such Holdings in certain counties of Ireland from the year 1841.

C. MEMORANDUM ON THE FINANCIAL ASPECT OF THE RELIEF OF DISTRESS IN IRELAND.

The Rev. Denis O'Hara, a member of the Congested Districts Board, during the course of his examination on the 2nd October last, referred to the amount of money that had been spent on the relief of distress in the West in the last quarter of a century, and expressed the opinion that the expenditure of a somewhat similar sum of money now, properly administered, would almost effect a radical cure of the chronic poverty of the West. (See Question 3618 *et seq.*)* A desire was expressed that official information should be obtained on the point, and with this object the Secretary of the Commission wrote to the Chief Secretary's Office, the Board of Works, the Local Government Board, the Irish Land Commission, and the Department of Agriculture, asking them to give all available information they could, showing the amount advanced by way of grant and loan for the relief of distress since 1878. Information was also sought respecting the source from which the funds came and the body upon which, in the case of loan, liability for repayment fell. It was requested that a distinction should be drawn as far as possible between the money expended in the congested districts and elsewhere, and also between the money expended on reproductive purposes, and that spent on measures of temporary alleviation.

Replies were received from all the bodies mentioned giving much detailed information which, however, it is not easy to summarise. The financial details are necessarily complicated; some advances were free grants, others were loans. The repayment of part of some loans was remitted, and such sums as were remitted may be regarded as free grants. Again, loans were made on varying terms. Some were at the ordinary rates of interest, some were free of interest, others carried only nominal interest; in some cases the interest was defrayed out of Imperial, in some cases out of Irish funds. Such transactions have a double aspect, and have to be considered as in part free grants, and in part loans. Again, some loans were secured on private property, and some on local rates, and in some cases the rates were to be recouped by the persons to whom the loans were made. In some cases the cost of administration, at any rate in part, came out of the advances; in other cases, this item of expenditure was chargeable to other services.

Again, it is not easy to distinguish how far the exact object of certain advances was temporary alleviation or something more. The term "Relief of Distress" is generally understood to refer to the immediate alleviation of exceptional and acute distress, and not to the amelioration of chronic poverty. Providing food and clothes, and supplying seed potatoes were obviously measures of temporary relief, and so also probably were works undertaken where more attention was paid to the amount of employment they would temporarily afford than to how far they would prove reproductive. Assistance to emigrants and the cancellation of arrears are not, however, so easily classified. Moreover many reproductive works, *e.g.*, light railways and harbour works, were utilised to give employment during periods of distress, and as works which tended to relieve chronic poverty necessarily tended also to relieve, as it were by anticipation, exceptional and acute distress, it is obviously difficult to draw a rigid line of demarcation.

Further, it is practically impossible to distinguish between money spent in the congested districts and elsewhere. The general unit of administration for the relief of distress was the Union; the unit of congestion is the Electoral Division; few Unions in the administrative counties containing congested districts are wholly congested or wholly non-congested; and, it must also be remembered, that most of the money referred to below was expended before a legal meaning was attached to the term "Congested Districts." Undoubtedly the bulk of the money expended since 1891 has been spent in the congested districts.

Administration.

Owing, moreover, to the fact that money was advanced under a number of different Acts, which, being framed to meet special emergencies, did not proceed upon uniform lines, and owing to the fact that frequently two or three Departments were concerned in the same loan or grant, the difficulty of giving a clear and comprehensive statement of expenditure is very much increased. The Board of Works handled most of the money. In some cases, *e.g.*, improvement of land, everything connected with the loan or grant was in their hands; in other cases, *e.g.*, Seed Supply Acts and Relief of Distress Acts, their function was confined to making an advance on the recommendation of the Local Government Board, and subsequently obtaining repayment in the case of loans. The Land Commission were concerned in these transactions as the body managing the Irish Church Temporalities Fund, and they had the control of most of the expenditure under the Arrears of Rent Act. With this exception the Board of Works managed the finance of money expended on the relief of distress up to 1890; the Local Government Board doing most of the administration with certain help from the Land Commission in seed supply operations. From 1890 to 1896 the finance was largely worked from the Chief Secretary's Office, and since 1896 the Local Government Board has been the body chiefly concerned. In most of the reproductive works, *e.g.*, light railways, the Board of Works have been solely concerned. The Department of Agriculture and Technical Instruction were concerned with the relief of distress only in 1905, when they contributed a sum of £9,500 towards the supply of seed and assisted in the inspection of seed at the port of despatch.

Expenditure, 1880-2.

The Irish Government state that the total outlay on operations for the relief of distress consequent on the failure of the potato crop in 1879, and the exceptionally severe winter of 1880 was £2,562,476 (inclusive of a sum of £267,000 distributed in food and clothing by different charitable organisations). It is not easy to obtain full particulars of this expenditure. Under the Relief of Distress (Ireland) Acts, 1880, £1,250,863 12*s.* 7*d.* was advanced on loan out of the Church Temporalities Fund, the rates of interest charged being 1 per cent. (see Table VI., col. 2, line 1); and a free grant of £19,069 3*s.* 0*d.* was made out of the same source, and was expended on food and fuel (see Table I., col. 10, line 8; and Table VI., col. 3, line 1). Of the money lent, £893,977 3*s.* 6*d.* had been repaid up to 31st March, 1905, and £21,151 8*s.* 4*d.* had been written off, leaving a balance due of £335,735 0*s.* 9*d.*, of which £6,238 1*s.* 9*d.* is regarded as irrecoverable.

The money advanced on loan was made up as follows:—

(1.) £923,620 was advanced for the improvement of lands, and the repayment was charged on the lands so improved. Of this sum, the repayment of £21,275 has been remitted, and consequently that figure may be regarded as a free grant (see Table I., col. 4, line 1), and £902,345 as a loan (see Table II., col. 6, line 1).

(2.) £271,189 was advanced for baronial works, repayment of which was charged on local rates. £7 of this sum was subsequently remitted, and consequently may be regarded as a free grant. (See Table I., col. 4, line 2); and £271,182 as a loan (see Table II., col. 5, line 2).

* See Appendix to the First Report of the Commission [Cd. 3267, 1906], p. 156.

(3.) £6,136 was advanced for arterial drainage, repayment being charged on private property. Of this, £716 was subsequently remitted, and may therefore be regarded as a free grant (see Table I., col. 4, line 3) and £5,420 as a loan. (See Table II., col. 6, line 4).

(4.) £38,536 was advanced for public health purposes, repayment being charged on the local rates (see Table II., col. 5, line 3).

(5.) £11,384 was advanced to the Boards of Guardians for relief purposes, the repayment being charged on local rates. (See Table II., col. 11, line 6). A sum of £15,756 was advanced out of Imperial funds (for providing food and clothing), at the ordinary rate of interest, repayment being charged on local rates; £10,856 was subsequently made a charge against the Irish Church Fund (the interest being reduced to 1 per cent.), and is included in the above-mentioned item of £11,384 (see Table II., col. 11, line 6); consequently the net loan made out of the Imperial funds at the ordinary rate of interest and charged on the local rates, was £4,900. (See Table V., col. 11, line 2).

Under one of the same Relief Acts a free grant of £48,202 was made from Imperial funds (see Table I., col. 3, line 12) for the construction of piers and harbours in the West of Ireland, one-fourth of the cost of each work being provided from other sources. £16,015 was thus spent out of charitable funds (see Table I., col. 7, line 12).

Under the Seed Supply Act of 1880, £647,562 was lent out of Imperial funds free of interest, but recoverable from the persons to whom the seed was supplied, the repayment being charged on local rates. Of this amount, £9,394 was subsequently remitted, and may therefore be regarded as a free grant (see Table I., col. 9, line 4); and £638,168 as a loan (see Table II., col. 11, line 5).

Under the Relief of Distress Amendment Act, 1880, £198,346 was lent out of Imperial funds at ordinary rates of interest, the repayment being guaranteed by the baronies concerned. Of the sum mentioned, £63,346 was devoted to railway works (see Table IV., col. 5, line 1); and £135,000 to harbour works (see Table IV., col. 5, line 2).

Expenditure, 1882–3

Under the Arrears of Rent Act, 1882, a loan of £27,010 2*s.* 11*d.* was made out of the Irish Church Fund at the ordinary rate of interest (see Table VI., col. 2, line 2), and was devoted towards the cancellation of arrears of rent on certain holdings, and the repayment was charged on these holdings. Of this sum £14,175 14*s.* 3*d.* had been repaid on 31st March, 1905, £418 10*s.* 11*d.* had been written off, and the amount outstanding was £12,415 17*s.* 9*d.* A free grant was also made from the same fund of £780,492 15*s.* 6*d.* for the cancellation of arrears of rent and rent-charges on certain holdings (see Table VI., col. 3, line 2); and under the same Act as amended by the Public Tramways Act, 1883, a free grant of £133,173 10*s.* 2*d.* was made out of the Irish Church Fund towards assisting emigration (see Table I., col. 10, line 13, and Table VI., col. 3, line 3). Under the emigration clauses of the Arrears of Rent Act, £11,755 was lent out of Imperial Funds at ordinary rates of interest to Boards of Guardians and was charged on local rates for the purpose of assisting emigration (see Table V., col. 11 line 3).

Under the Relief of Distressed Unions (Ireland) Act, 1883, £10,257 15*s.* 0*d.* was given out of the Irish Church Fund as a free grant to five unions, to enable the Guardians to meet their liabilities. (See Table I., col. 10, line 9, and Table VI., col. 3, line 4).

Expenditure, 1885–6.

Under the Poor Relief Act of 1886 £20,000 was given as a free grant out of the Irish Church Funds to the Guardians of Belmullet, Clifden, Galway, Oughterard, Swinford, and Westport Unions, to aid in defraying cost of relief (see Table I., col. 10, line 10, and Table VI., col. 3, line 5); and another £20,000 was similarly given under the same Act for piers and roads (see Table I., col. 4, line 11, and Table VI., col. 3, line 6), and £913 was supplied by voluntary charitable funds for the same purposes (see Table I., col. 7, line 11).

The following is a statement of the expenditure upon the relief of distress in 1890-91:— Expenditure, 1890-1

	£	*s.*	*d.*
Wages to labourers,	128,496	0	0
Tools and materials,	12,745	0	0
Royal Engineer officers and Royal Marines,	3,049	0	0
Royal Engineer Supervisors and members of the Royal Irish Constabulary,	23,133	0	0
County Surveyors and assistants,	4,999	0	0
Local Government Board Inspectors and Relieving Officers,	4,266	0	0
Extra remuneration (civil departments),	1,397	0	0
Hire of steamers,	7,088	0	0
Extra cost (railways),	35,798	0	0
Miscellaneous expenses,	3,351	15	0
Chargeable to distress,	224,322	15	0
Seed Inspectors,	4,000	0	0
Completion works contract,	8,000	0	0
Forestry operations,	2,508	0	0
Chargeable to other services,	14,508	0	0
Total,	238,830	15	0

Particulars of the expenditure upon the relief works undertaken during this period will be found in Returns presented to Parliament on the 6th March, 1891, and the 25th February, 1892, Nos. 132 and 85 respectively.

Under the Seed Supply Act of 1890, £273,620 was advanced by way of loan out of Imperial funds. The repayment of £766 was subsequently remitted, and this sum may consequently be regarded as a free grant (see Table I., col. 9, line 5); and the balance, £272,854, as a loan (see Table III., col. 11, line 1). All charges by way of discounts on cash sales (see Table I., col. 10, line 5), and all interest, was borne by the Irish Church Fund, the total amount so chargeable being £17,563 19*s.* 6*d.*, which may therefore be regarded as an additional free grant. (See Table VI., col. 3, line 7). It should be noted that the repayment of all money advanced for the supply of seed under this Act, as under the Seed Supply Act of 1880, and the similar Acts of 1895 and 1900, was charged in the local rates, but the bulk was recovered from the persons to whom the seed was supplied.

The relief of distress expenditure in 1894-5 was as follows:— Expenditure, 1894-5.

	£	*s.*	*d.*
Wages to labourers,	47,550	11	1
Tools and materials,	4,373	2	9
Royal Engineer officers and Royal Marines,	1,462	2	6
Royal Engineer Supervisors and members of the Royal Irish Constabulary,	8,713	13	2
County Surveyors and Assistants,	1,596	8	8
Local Government Board Inspectors and Relieving Officers,	3,000	0	0
Extra remuneration (civil departments),	842	0	0
Hire of steamers,			
Extra cost (railways),			
Miscellaneous expenses,	800	14	5
Chargeable to distress,	68,338	12	7
Seed Inspectors,	3,873	6	7
Completion works contract,	6,262	15	0
Spraying machines,	650	0	0
Extra cost (railways),	900	0	0
Forestry operations,			
Chargeable to other services,	11,686	1	7
Total,	80,024	14	2

Some particulars of the expenditure upon relief works during this period will be found in a Return presented to Parliament on the 31st May, 1895, No. 287.

Under the Seed Supply Act of 1895, £62,034 was advanced from Imperial funds (see Table III., col. 11, line 2). The payments for cash discounts (see Table I., col. 10, line 6), and interest were charged against the Irish Church Fund, and these payments amounted in all to £3,738, which may be regarded as a free grant. (See Table VI., col. 3, line 8).

The expenditure out of Imperial funds (voted money) upon relief works during the winter of 1897, and the spring and summer of 1898, was 75 per cent. of such expenditure of Boards of Guardians in this behalf as was approved by the Local Government Board and amounted to £22,182 18*s*. All this money was spent upon works of utility such as road-making, and may therefore be classed as reproductive.

Additional Government Grants amounting to £3,994 were given for the purpose of reducing the rates in certain distressed Electoral Divisions where the cost of the exceptional relief pressed heavily, and a sum of £3,038 was given to Belmullet Union in respect of the year 1897.

Free grants of seed were also made which cost £3,867 15*s*., and the whole of the produce of this seed was subsequently sprayed under the supervision of the Agricultural Department of the Land Commission at the Government expense, a sum of £1,909 17*s*. 6*d*. being mainly accounted for in this way.

The following additional expenditure was incurred by the Government during this period of distress:—

	£	*s*.	*d*.
Extra remuneration and expenses of Relieving Officers, - -	1,125	4	11
Extra remuneration and expenses of County Surveyors, - -	644	15	0
Salaries and expenses of inspectors, &c., - - - -	7,070	7	7
	£8,840	7	6

Under the Seed Supply Act, 1898, £77,763 was advanced out of the Imperial funds as before (see Table III., col. 11, line 3), the charges for cash discount (see Table I., col. 10, line 7) and interest being borne by the Irish Church Fund, this amounting in all to £4,769 18*s*. 8*d*., which may therefore be regarded as a free grant (see Table VI., col. 3, line 9).

In 1904-5 the Boards of Guardians of seven Unions expended £17,191 10*s*. 8*d*. upon relief works in their Unions in pursuance of Section 13 of the Local Government (Ireland) Act, 1898, of which £12,241 1*s*. 3*d*. was recouped by the Government from Imperial funds, and the remainder was defrayed from local rates.

This money was expended on works of public utility such as the repair and construction of roads, which could be carried out mainly by unskilled labour, and may, therefore, be classed as reproductive. A further sum of £2,394 8*s*. 10*d*. from Imperial funds was expended in connection with the employment of engineers, the work of supervision, and the completion of some of the relief works. This expenditure might also be classed as reproductive.

Under the Seed Supply Act of 1905 loans were made from Imperial funds amounting to £70,018 (see Table V., col. 11, line 1), and a free grant of £9,500 was made by the Department of Agriculture and Technical Instruction towards decreasing the actual cost to purchasers of seed potatoes under the scheme issued by the Local Government Board. A sum of £209 19*s*. 1*d*. was also expended on the remuneration of four official inspectors lent by the Department to assist the Poor Law Guardians in the selection of the seed. These sums were paid out of the Department's Endowment Fund, nearly one-half of which is derived from the Irish Church Fund, the remainder coming from Imperial sources. The remuneration of the inspectors employed by the Local Government Board to inspect the seed amounted to £1,949 19*s*. 2*d*.

The difficulties in the way of accurately summarising the expenditure incurred in connection with the relief of distress during the period 1880 to 1905 will be obvious from the foregoing remarks; but the following is thought to be as fair a summarisation as can be attempted, and if any exception is taken to the inclusion of certain items, the detailed information given above will enable anyone so objecting to correct the following table according to the view taken.

TABLE showing AMOUNTS of FREE GRANTS and LOANS made in connection with the RELIEF of DISTRESS in IRELAND from 1880 to 1905, distinguishing IRISH from IMPERIAL SOURCES. APPENDIX IV.

PERIOD.	FREE GRANTS.		LOANS.	
	From Irish Funds.	From Imperial Funds.	From Irish Funds.	From Imperial Funds.
	£	£	£	£
1880-2, ...	41,067	57,596	1,228,867	841,414
1882-3, ...	923 923	—	27,010	11,755
1885-6, ...	40,000	—	—	—
1890-1, ...	17,564	239 597	—	272,854
1894-5, ...	3,733	80,025	—	62,034
1897-8, ...	4,769	43,833	—	77,763
1904-5, ...	9,500	16,585	—	70,018
Total, ...	1,040,561	437,636	1,255,877	1,335,838
	£1,478,197		£2,591,715	
	£4,069,912			

The difficulties of drawing a line of demarcation between relief of distress purposes, properly so called, and reproductive works are, as already mentioned, very great, but undoubtedly nearly all the free grants and half the loans were applied in Relief of Distress.

It will be understood that the above figures understate the case, as it has been found possible to estimate the cost of administration only in a few cases, and where the interest on loans issued free or at less than the ordinary rate of interest was defrayed out of Imperial funds, particulars are not available of the additional amount thus expended, though where the interest was borne by the Irish Church Fund, the amount so paid is included in the figures shown above.

Local Rates

It must be observed that no account has been taken in the above table of the amount of money that has been applied out of local rates, during the period under discussion, towards the relief of exceptional distress, as the materials for making anything like an accurate calculation are not available; but the poor relief expenditure during the years of distress is estimated by the Local Government Board to have exceeded the average expenditure of normal years by about £500,000.

Charitable Funds.

It should also be noted that a large sum was spent out of charitable funds. Naturally, complete information is not available about this, but the following are the chief items:—

In the winter of 1879-80 large sums were collected by the Duchess of Marlborough's Committee and by the Mansion House Committee. The former expended in relief and in the supply of seed, £130,677. The latter spent similarly a total of about £174,125. A sum of £20,000 odd or £21,000 odd was also voted by the Parliament of the Dominion of Canada, and was expended mainly in piers and harbours. Considerable sums were also expended in relief, from other charitable funds, such as the Land League Relief Fund, The New York Herald Fund, and the Philadelphia Fund, particulars of which are not readily obtainable. In 1885-6 seed potatoes were distributed by Mr. Tuke and other charitable persons, but no exact information is available as to the expenditure incurred. In 1898 the Mansion House Committee collected a sum of £11,155 2*s*. 10*d*., which was expended in the form of grants to schools, foods, employment, supply of seed, expenses of mangement, &c.

In 1906 a grant of £300 was received from the Discretionary Committee of the Queen's Unemployed Fund, and was expended upon Relief Works in congested divisions of Westport and Clifden Unions.

Light Railways, &c

If account is taken of the money spent on light railways and other undoubtedly reproductive purposes (details of which are given in the statements following Table VIII.), the expenditure already mentioned must be increased by over £3,000,000.

WALTER CALLAN.
Secretary.

12th August, 1907.

THE following STATEMENT (supplied by the Commissioners of Public Works) shows the MONEYS SPENT or ALLOCATED out of IMPERIAL and IRISH FUNDS for LIGHT RAILWAYS or cognate works.

IMPERIAL FUNDS.

TRAMWAYS AND PUBLIC COMPANIES' ACTS, 1883.

Dividend on guaranteed Capital of certain Railways: maximum of 2 per cent per annum on £1,536,112 = £30,722.

Capitalized Value, ... £1,024,066

£30,722 is the maximum annual sum payable. The amount that has been actually paid is shown below (see A).

RAILWAYS ACTS, 1889 AND 1893.

Free Grants, ... £1,147,867

Details are given below (see C).

RAILWAYS ACT, 1896.

Free Grants for Railways, Details are given below (see C). £412,175

Free Grants for Coach and Steamer Services, ... 83,332

MARINE WORKS ACT, 1902.

Free Grants for Fishery Piers, &c., . . £100,000

IRISH CHURCH FUND.

Sea Fisheries Act, 1883.

Free Grants for Fishery Piers, . . . £250,000

£3,017,440

Of these sums the Grants for Railways under the Act of 1896 were expressly confined to Railways lying wholly or mainly in congested districts, and the Grants under the Act of 1902 were confined to congested districts, with one exception, amounting to some £6,000. The actual expenditure up to date under the Act of 1902 is about £31,000.

Sums of money were also spent in supplying boats and gear to fishermen out of the Irish Reproductive Loan and Sea and Coast Fisheries Funds which, for some years, were administered by the Board of Public Works; these funds are now in the hands of the Congested Districts Board and the Department of Agriculture and Technical Instruction.

Under the Act of 1883 the guaranteeing areas are liable for the payment of dividends, and also of any deficit on working expenses of the guaranteed lines. The Treasury recoupment is confined to one-half of the sums paid in respect of dividends only, with a maximum of two per cent. on the paid-up capital. The following statements show the total amount so far contributed by the Treasury to 31st December, 1906, and also the total net payments so made out of rates, after deducting the Treasury contributions.

A.—STATEMENT showing total amount contributed to 31st December, 1906, by the Treasury to Railways with Guarantees under the Tramways and Public Companies Act, 1883.

N.B.—There are no fishermen in Counties Leitrim and Roscommon.

* The number of fishermen in each of the Unions named in Co. Cork is not shown, except under the two headings—(A) "Under 20 years" and (B) "Aged 20 years and upwards." It has, therefore, been found necessary to put the number of fishermen "Under 20 years" in Col. 4, and the number of fishermen "Aged 20 years and upwards" in Col. 5 of this Return.

(*b.*)—RETURN showing the number of occupiers of land in each of the Counties containing Congested Districts who are also engaged in Fishing, according to Table XXIII. of the County Books of the Census of 1901.

COUNTY.	Number of occupiers of land who are also engaged in fishing.	Total Number of Fishermen returned in Table A, annexed.	Percentage of Farmer-fishermen (Col. 2), to total Number of Fishermen (Col. 3).

Castletown, ...	40*	2,249	1·8
Skibbereen, ...			
Skull, ...			
Totals, ...	487	5,756	8·4

N.B.—There are no fishermen in Counties Leitrim and Roscommon.

* There are not separate figures in the Census County Books for *Unions* in the form of Table XXIII., and therefore, the actual number of farmer-fishermen for the four Unions cannot be given, but there are in the whole county of Cork only 87 farmer-fishermen, and it is estimated that about 40 of them reside in the four Unions under consideration.

I. Rulings of Commissioner O'Brien on the Dillon Estate. (See Memorandum A put in by the Secretary of the Congested Districts Board for Ireland, and printed in the Appendix to the First Report on page 233.)

(1.) Memorandum to the Secretary of Congested Districts Board, 16*th December*, 1900.

With reference to the proposed sales on part of this estate, Commissioner O'Brien, before whom the matter is pending, desires me to ask that you will bring this letter before your Board at their next meeting. Copies of the proposed form of agreement have been furnished to him for the purpose of considering whether the completion of the sales might not be expedited by fiating the agreements as provided by section 32 of the Land Act, 1896.

The reservation of game, of the right of entry for shooting and preserving, together with the obligation imposed on each purchaser to allow his name to be used in prosecutions under the Game Laws, are so unusual and so contrary to the spirit of the Act of 1896, which is to give purchasers the full and absolute ownership of the land they buy, that Commissioner O'Brien requests that the Congested Districts Board should reconsider the questions of these reservations.

No exceptions or reservations can be put into a Vesting Order unless they have been approved of by the Land Commission, and the Land Commission are satisfied that the effect of such reservation was explained to and understood by the purchasers.

It is presumed that it is intended to give real effect to these reservations, and they appear most objectionable for the following reasons:—

Game preserving is not advantageous, and is generally positively injurious to agriculture. In thickly-inhabited districts like this the injury is greater than in opposite circumstances. The pursuit of game where enclosures are small causes damage to fences, and shooting is often a danger to the inhabitants and their cattle. Game cannot be preserved without game-keepers, and these are nearly always in a position of hostility to farmers, who resent their right of entry at will upon their farms.

An occasion for ill-will, which in other districts has often led to serious outrages and murders, will be created by the Board setting up a system of game preserving in this district.

It does not appear that any such system has hitherto existed here, that there is any valuable stock of game at present, and that the shooting rights could ever be of any appreciable value or commensurate with the cost of preserving.

The exercise of these rights could not be anything but a nuisance and an injury to tenant purchasers, if the Board does not itself preserve, but allows a game tenant to do so, the matter would be worse, for on small farms it requires the *closest watchfulness to prevent the destruction of game by persons who wish to do so.*

The obligation that every purchaser shall allow his name to be used in game prosecutions is calculated to set the whole country by the ears, and to stir up any amount of quarrels among neighbours.

The tenants in this district being particularly poor, and depending on the Congested Districts Board, it is the more incumbent on the Land Commission to be thoroughly satisfied that each purchaser fully understands the full effect of the reservations and the obligation he is required to undertake as to game prosecutions by the Board.

Even if understood and assented to by the purchasing tenants, it does not follow that the Land Commission ought to or will assent to the reservations proposed. They are moreover calculated to delay the completion of the sale.

Will you be good enough to have this matter considered by your Board at their next meeting, and convey the final decision to the Land Commission, so that the question of this complication being introduced into the agreements may cause as little delay as possible in the proceedings.

I am also to suggest that the paragraph in the agreement forms, "The sale shall be completed by a Vesting Order," might be omitted, as it seems particularly desirable that the completion of the sale shall be expedited, if possible, by fiating the agreements instead of by Vesting Orders.

(2.) Memorandum to the Secretary, Congested Districts Board.

Dillon Estate.

The 43 agreements received will be sent on for inspection at once, but will not be sanctioned subject to the proposed reservation of game and the right of entry for the vendors, and their assigns, for hunting, coursing, shooting, fishing, and preserving

I have explained verbally to the Members of the Congested Districts Board that I would not approve of these exceptions and reservations for the following reasons:—

1. The Land Law Act contemplates the vesting in purchasers of the full and uncontrolled ownership of their holdings. The proposed exceptions and reservations are a substantial detraction from and diminution of the rights of a landowner.

2. Game preserving is distinctly injurious to agriculture, particularly in a small farm district.

3. Hunting, coursing, and the pursuit of game cause damage to fences and cultivation. Shooting in thickly inhabited districts is often a danger to the inhabitants, their cattle, and poultry.

4. There is no provision insuring compensation to the purchasers for damage done by the exercise of the rights reserved.

5. There has been no game preserving hitherto, and it is admitted that there is no stock of preservable game at present in this district. Game cannot be preserved without game-keepers, and these are nearly always on bad terms with farmers, who resent their right of entry at will upon their land.

6. The exercise of the rights reserved could never be anything but a nuisance to the purchasers, and might, as it has been elsewhere, be the cause of outrages and disturbances.

7. If the Board let their rights, as contemplated in their Report of last year, they would have no control over the manner in which they might be exercised

8. Before Vesting Orders are made subject to such reservations and exceptions, the Land Commission must be satisfied that the effect of these exceptions and reservations has been explained to and understood by each purchaser. The tenants in this district are unusually poor and dependent on the vendors. It is the more incumbent on the Land Commission to be satisfied that each purchaser fully understands the full effect of the reservations and of the obligations he is required to undertake as to game prosecutions.

9. With regard to par. 2 of the agreement, this is neither an exception nor reservation, but a contract by the purchaser to allow his name to be used in game prosecutions against any and everybody, but probably against his neighbours. This is calculated to set the whole country by the ears, and to stir up any amount of quarrels and bad feeling.

10. The inspection and vesting of the holdings will be much delayed by the introduction of these complications into the contracts and Vesting Orders.

11. It is to be noted that game preserving, hunting and coursing are not named among the purposes for which statutory powers are given to the Congested Districts Board.

I understand that the Congested Districts Board wish to appeal against my refusal to approve of the exceptions and reservations, and in order that my refusal may not delay the sales, as it would if made on sanctioning the agreements, an order will be made at once refusing generally to approve of the exceptions and reservations in the agreements lodged. But I again suggest to the Congested Districts Board that it would facilitate the sales, expedite their completion, be more consistent with the useful and benevolent purposes for which the Board was created, and be more likely to lead to the effectual preservation of such game as can exist in this district, for the Board after the completion of the sales, when the purchasers are freer agents than at present, to make some amicable arrangement with them as to the sporting, than to compel their tenants by making it a condition of sale to agree to such a restriction on their rights of ownership.

If the Board are going to appeal against my decision on the general principle, I suggest that they should do so at once, but it must be remembered that, apart from the general principle, if it appears that any individual purchaser has not understood the effect of the exceptions, &c., and has not knowingly assented to them, I shall refuse to approve of the reservation in that case.

The Inspectors will be directed to ascertain from each purchaser whether the effect of the reservation has been understood.

M. O'BRIEN.

30th January, 1901.

J.—Correspondence with the Secretary of the Congested Districts Board for Scotland.

Royal Commission on Congestion in Ireland.

29, Bury-street,

St. James's, London, S.W.,

24th March, 1908.

Sir,

I am directed by the Commission to send you the enclosed memorandum of points respecting the treatment of sporting rights by your Board, on which they would be glad to get information. As the Commission is now sitting, it would greatly add to the favour you will confer upon them if you could communicate with me during the course of the next week.

I am, Sir,

Your obedient Servant,

WALTER CALLAN.

Secretary.

The Secretary,

Congested Districts Board for Scotland,

Edinburgh.

MEMORANDUM REFERRED TO IN FOREGOING LETTER.

1. As to method of dealing with sporting rights. When the Board buy a property for purpose of relieving congestion do they always buy the sporting rights, or is it a matter of arrangement, as between the owner and the Board, whether the sporting rights remain vested in the vendor or pass to the Board?

2. If they remain vested in the former owner, what is the nature of arrangements to prevent the crofters settled by the Board on the property from interfering with the preservation of game and fish?

3. If the sporting rights become vested in the Board—

(*a*) Do they subsequently vest sporting rights (power to take and kill game and fish) in the occupier settled on the land?

(*b*) If so, are these rights conveyed by the Board to the occupier for nothing, or have the occupiers to pay for them, and, if so, how?—*e.g.*, do they purchase outright or pay an annual rent?

If the sporting rights are not vested in the occupier by the Board.

(*c*) Do the Board retain all the exclusive rights of sporting and the taking of game and fish, exercised by the former owner, and is any power reserved by the Board to punish by ejectment or otherwise interference with game or fish or their preservation?

(*d*) How do the Board deal with the rights they retain?—*i.e.*, do they lease them?

4. It would be most valuable to have from the Board for Scotland a general outline of the principle and practice of procedure in respect of game, fish, sporting rights and preservation, and a general sketch of its results as affecting the national interests in the game and fish.

N.B.—At page 5 of the Eighth Report of the Congested Districts Board for Scotland there is an account of the terms proposed to crofters to purchase holdings on the estate of Kilmuir, by which it appears that the price of the land was to be 20 years, the price of sporting rights if and when sold to be 16 years; an annuity was to be charged not merely on the price of the holding, but also on "shootings."

CONGESTED DISTRICTS BOARD,

Edinburgh, 27*th March*, 1908.

SIR,

Before replying in detail to the points in the Memorandum which accompanied your letter of the 24th March, regarding sporting rights on the properties purchased by the Congested Districts Board for Scotland, I may explain first as regards killing game that legal authorities appear to agree that the right to kill any game in Scotland is an incident of the right of property in land. This right may be delegated either gratuitously or for payment. It is doubtful whether it can be permanently alienated *in toto*, but it would appear from a case decided in March, 1896, by the Court of Session that the right may be communicated as a servitude in favour of neighbouring lands.

This case is reported in Vol. 23 of Rettie's Reports of cases decided in the Court of Session, 1896, and shortly was as follows:—

In 1808 Innes, proprietor of Ballogie, was infeft in that Estate with a right of fowling in the Forest of Birse, which belonged to the Earl of Aboyne.

In 1896 the Court of Session held that the proprietor of Ballogie was entitled (1) to let his right of shootings in the Forest to any persons whether they were or were not tenants on Ballogie; and (2) to sell the game killed by him for sport.

Fishings.

The right of salmon fishing belongs to the Crown as a separate heritable estate. The right may be given out by the Crown either with the land or separately. Persons now in right of salmon fishings must have acquired these rights by grant from the Crown, either to themselves or to their predecessors. Trout fishing appears to require no express grant or prescriptive possession, but passes, in the cases of private rivers or lakes, as a part and pertinent of the land. The right may, however, be reserved or given out expressly to another, who is not proprietor of the land.

To deal now with the points as numbered in your Memorandum:

1. As to method of dealing with sporting rights. In all cases of purchase of land by the Board they have also acquired the right to kill game, and, with one exception, the fishing rights.

In this exceptional case the block of land purchased by the Board in Sutherlandshire is bounded on the east side by the famous salmon river Naver, and on the north and south sides by smaller streams, tributaries of the Naver. In the conveyance of the estate to the Board the fishing rights were reserved by the Duke of Sutherland.

2. If they remain vested in the former owner, what is the character of arrangements to prevent the crofters settled by the Board on the property from interfering with the preservation of game and fish?

In the case of the Board the above is the only instance of reservation, and the preservation of fish in the Naver is a matter for the owner of the fishings.

3. If the sporting rights become vested in the Congested Districts Board (*a*) do they vest sporting rights (and power to take and kill game or fish) in the occupier settled on the land? (*b*) If so, are these rights conveyed by the Congested Districts Board to the occupier for nothing, or have the occupiers to pay for their acquirement, and if so, how? *e.g.*, purchase out-right, or annual rent?

In purchasing the estates the value of the sporting rights acquired by the Board from the original vendor forms part of the price paid to him by the Board, and when the estate is re-sold to the settlers, the value of these sporting rights is taken into account in the price fixed for the re-sale of the whole subjects to the community settled upon the estate.

These lands in the Highlands consist partly of arable land lotted out into small individual holdings, and partly of hill pasture, held by the Township in common. The grazing on this common pasture and other matters connected with the common property of the Township are managed by a Committee. The sporting rights are part of the common property, and the rent obtained for the sporting rights goes into the common purse, and is divisible according to the shares in the common possessed by each occupier.

Of course, the value of the sporting rights and the rent paid for them by the tenant or tenants vary according to the quality of the sport to be obtained. In no case does the individual occupier retain any sporting rights himself. In all cases these are let and the community really come in place of the single owner.

The settlers pay for the sporting rights just as they pay for other rights in the property. The method of repayment to the Board is by a terminable annuity, usually for fifty years, whereby principal and interest at $2\frac{3}{4}$ per cent. are repaid by an annuity of £3 14*s.* 1*d.* for each £100 of the price.

4. It would be most valuable to have from the Congested Districts Board for Scotland a general outline of the principle and practice of procedure in respect of game, fish, sporting rights and preservation and a general sketch of its results as affecting the National interests in the game and fish.

The actual experience of the Board is not very great in this matter, but, so far as it goes, they think that settlers are quite alive to the value of their sporting rights and do all they can to keep up the quality of the shootings.

A Township Committee is an awkward body for a man who wants a moor, or his agent, to deal with. Accordingly, in practice the negotiations for sporting leases have hitherto been conducted by the Land Manager of the Board, who has been able to make advantageous arrangements for the leases, and who advises the various committees in all the details that good management of shootings requires.

From their knowledge of shootings and fishings in crofting districts generally in the Highlands, the Board do not think that any interests in game and fish suffer greatly from the presence of small holders. There may, of course, be cases where men poach or otherwise do injury, but there are very good shootings in Scotland over crofter grounds.

With reference to the note at the end of the Memorandum. Matters were not quite ripe in Kilmuir for the sale of the whole estate, including farm lands and crofters' holdings, to settlers. The Board began by offering to sell their holdings to the small tenants on the estate. If and when this was adjusted, and the farm lands sold to new settlers, the Board proposed to re-arrange the shootings on the estate, so that certain of the townships under the new arrangement might be grouped together as the owners of the shootings over their lands. This is no departure from the general principle, but a necessary expedient to enable the sporting rent of a certain area to be allocated to the townships, new or old, to whom that area will belong.

I hope this information may meet the points of the Commission, but I shall be very glad to give you any further particulars I can.

I am, Sir,

Your obedient Servant,

R. R. M'GREGOR,
Secretary.

WALTER CALLAN, Esq.,
Secretary,
Royal Commission on Congestion
in Ireland,
London.

K.—SCHOOL GARDENS IN CONNECTION WITH NATIONAL SCHOOLS.

Report of a Conference between the Board of National Education and the Department of Agriculture and Technical Instruction for Ireland.

A conference between representatives of the Board of National Education and of the Department of Agriculture and Technical Instruction was held at Tyrone House, Marlborough-street, on Tuesday, 17th December, 1907.

The proceedings commenced at 12 o'clock.

There were present :—

Mr. W. J. M. Starkie, M.A., Litt.D., Resident Commissioner of National Education; Reverend Henry Evans, D.D.; Most Reverend Patrick Foley, D.D., Lord Bishop of Kildare and Leighlin; Lieut-General Sir William F. Butler, G.C.B.; Mr. W. J. Dilworth (Secretary), *representing the Commissioners of National Education.*

Mr. T. W. Russell, M.P., Vice-President Department of Agriculture, &c.; Mr. T. P. Gill; Professor J. R. Campbell; Mr. George Fletcher; Mr. J. D. Daly, *representing the Department of Agriculture and Technical Instruction.*

(Mr. W. M. Heller, Organising Inspector of Science under the Board of National Education, was also present during portion of the proceedings).

The conference was held in accordance with the following recommendation made by the Consultative Committee of Education, at their meeting on 15th November, 1907 :—

> "That the Department should consider, in consultation with the National Education Board, the feasibility of arranging some special courses in Horticulture suitable for teachers in rural schools; and that they should also consider whether it would be practicable to make arrangements whereby the services of the horticultural instructors employed under the county agricultural schemes could be utilised for supervising and otherwise assisting such instruction."

After a full discussion, the following resolutions were unanimously adopted :—

I.—Course for Teachers in the Training Colleges.

1. That there should be included in the curriculum of the training colleges under the Board of National Education a course of practical instruction intended to fit National Teachers for managing and giving instruction in connection with school gardens.
2. That special instructors for this course should be added to the regular staffs of the training colleges.
3. That the land requisite for plots should be provided at the training colleges.
4. That the Department of Agriculture and Technical Instruction should assist in this work by supervising the instruction, and inspecting and reporting on it to the Board of National Education.

II.—Courses for Teachers already in National Schools.

1. That where, in the judgment of the Department and the County Committees of Agriculture, the regular work of the Horticultural Instructors under county schemes permits, these Instructors should be utilised for the purpose of training National teachers at central classes, and for organising school gardens in connection with the National Schools; and that, where necessary, special funds should be provided to enable the County Committee to employ an additional Horticultural Instructor for the purpose.
2. That the land and premises of the Department's Agricultural Schools should be utilised, where practicable, for these classes.
3. That the Board of National Education should provide for the travelling expenses of National Teachers attending such central classes in horticulture.

III.—School Gardens for National Schools.

1. That the Local Authorities should be empowered to acquire land compulsorily, where necessary, for the purpose of school garden and agricultural teaching in connection with National Schools.
2. That the Board of National Education should provide for such equipment (tools, tool-house, seeds, manures, &c.), as might be necessary for the efficient working of each school garden.
3. That the Board of National Education should provide fees for qualified National Teachers who give school garden instruction under approved conditions.
4. That the inspection of the school garden work should be undertaken for the Board of National Education by the Department of Agriculture.

IV.—Agricultural Instruction at National Schools.

1. That the teaching of agriculture, as distinct from school garden teaching, in schools under the Board of National Education, should be undertaken only in a school organised as an upper primary centre to which pupils from the National Schools in the neighbourhood could come.
2. That the course should be given by the Agricultural Instructor of the County Committee, or by specially trained teachers under his direction, and working under the supervision of the Department of Agriculture and Technical Instruction.

V.—Application to the Treasury.

That an application be forthwith made to the Treasury, both by the Board of National Education and by the Department, for the funds necessary for each, to enable them to carry out their respective shares of the joint scheme of work outlined in the foregoing resolutions.

L.—STATISTICS AS TO EXPENDITURE ON LABOURERS' COTTAGES.*

TABLE showing the Valuation, the number of Labourers' Cottages (built or in course of construction), amount of Loans (sanctioned and received), Exchequer contributions for the year 1906, and other particulars in respect of Labourers' Cottages in the eight counties and four unions of Cork which contain congested districts.

APPENDIX V.

APPENDIX V

CORRESPONDENCE between the CONGESTED DISTRICTS BOARD and the IRISH GOVERNMENT.

(*Continued from Appendix to First Report of the Commission*, [*Cd.* 3267—1906], *p.* 262.)

Letter No. 8.

CONGESTED DISTRICTS BOARD FOR IRELAND,
23, RUTLAND SQUARE, DUBLIN,
15*th April*, 1907.

ESTIMATES, 1907–8.

SIR,

I am directed by the Congested Districts Board to submit for transmission to the Lords Commissioners of His Majesty's Treasury their Estimates of Receipts and Expenditure for the year 1907-8.

In the Board's letters of 9th October, 1905, and 30th April, 1906, in reference to their financial position, they pointed out that their income was insufficient for the preparation for sale of the estates which had been purchased, or must be purchased, if reasonable progress was to be made in this branch of their work.

The crisis which it was anticipated would occur in 1907-8 has been postponed to 1908-9 owing to the delay in recovering the "enhanced values" of the estates purchased prior to the Act of 1903. In consequence of this delay, the sum available for the improvement of the estates purchased under the Act of 1903 was so largely reduced that in the past year a stay was placed on the execution of improvement works, and only £75,000 was expended out of £108,000 estimated, and although £110,000 is provided for in the year 1907-8 for the improvement of 115 estates, a balance of £40,000 required to complete the preparation of these estates for sale must be deferred to the year 1908-9 owing to the want of funds.

The enclosed estimates for Estates transactions have been framed in strict accordance with the conditions laid down by the Lords Commissioners of the Treasury in their letter of the 28th February, 1906—that is, the sum to be borrowed from the Board of Works on each estate has been limited, first by the rule that it shall not exceed the sum to be recovered on re-sale (in excess of the Land Commission advance), and, secondly that it shall not exceed two-thirds of the estimated improvement expenditure under the specified Heads. Subject to these conditions only £47,000 can be borrowed in the coming year on the estates which are being prepared for sale and the Board are enabled to provide for an expenditure of £110,000 (on improvements) only by the estimated receipt of £123,000 for resale values of the older estates, and £35,000 for enhanced value of the newer estates which will be sold in the year. This latter sum would at once be paid to the Board of Works in reduction of the £101,000 which will then have been borrowed, if the position of the Board's funds would permit. Two causes will, however, make this impossible, one being the want of the additional income for the two years 1906-7 and 1907-8 which they declared to be necessary, the other being the higher percentage of loss on estate operations; this was estimated at 8 per cent. in the Board's letter of the 30th April last, but it is now anticipated that it will reach an average of 12 per cent. on the properties purchased since the passing of the Act of 1903. In view of these difficulties, the Board intend to proceed as far as possible with the preparation of the estates for sale, but they cannot, even on the favourable view of the probable re-sales which has been taken in the estimate, and after borrowing the full amount that the regulations permit, provide for more than 70 per cent. of the required expenditure on improvements they desire to carry out in the year, and at its close their liabilities in respect of estates will exceed the assets by about £32,000.

With regard to the progress which has been made in dealing with the estates, I am to report as follows:—

Of the thirty-nine estates purchased prior to the Act of 1903, there have been completely sold fourteen, with sale prices amounting to £56,924; and the remaining twenty-five, sale prices amounting to £586,787, have been sold, with the exception of fragments valued in all at £64,364. These sales represent the value of agreements signed by tenants, but about £60,000 for these sales has not yet been advanced by the Land Commission.

Of the 107 estates bought under the Act of 1903 one has been completely sold for £835, five with estimated sale prices of £42,273 have been sold, with the exception of fragments amounting to £7,506; one will be sold immediately for about £22,019, and seventy-seven, which cost £660,742, are now being prepared for sale in current year leaving thirty, which cost £619,340 to be completed and sold after the 31st March, 1908.

The united prices of the estates purchased under the Act up to date is £1,280,082, including fifteen purchases amounting to £106,893, which have been agreed upon in the year 1906-7.

A Statement of the Board's probable assets and liabilities in regard to Estates at 31st March, 1908, is enclosed.

The general cash balance at the close of the year 1907-8 has not been included.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,

Dublin Castle.

STATEMENT OF BOARD'S PROBABLE ASSETS AND LIABILITIES IN RESPECT OF ESTATES ON 31ST MARCH, 1908.

On the 1st April, 1908, the Board's account in respect of estates will stand as follows:

Liabilities.

(*a*.) Balance of expenditure necessary to prepare estates for sale excluding twenty-two recent purchases,	£21,000
(*b*.) Due to the Board of Works on loans for improvement of estates bought under Act of 1903,	£101,000
(*c*.) Estimated loss at 12 per cent. on twenty-two estates purchased for £126,000,	£15,000
	£137,000

Assets.

(*d*.) Enhanced value receivable from Land Commission on estates not sold at 1st April, 1908 (excluding (*c*),	£83,000
(*e*.) Price of estates bought by Board without advances from Land Commission,	£8,000
(*f*.) Price of holdings bought and not included in (*d*),	£6,000
(*g*.) Value of cattle on grass lands,	£8,000
	£105,000
Deficit,	£32,000
	£137,000

F. W. D. MITCHELL.

Letter No. 9.

DUBLIN CASTLE, 23*rd May*, 1907.

Immediate.

SIR,

With reference to your letter of the 15th ultimo relative to the Estimates for your Board for the year 1907-8, I am directed by the Lord Lieutenant to transmit, to be laid before the Congested Districts Board, copy of a letter from the Lords Commissioners of His Majesty's Treasury on the subject.

Having regard to the terms of this letter His Excellency suggests for the Board's consideration that it is undesirable to prosecute any large purchases and that only specially suitable grass lands should be bought, and that only within the limit indicated.

I am, Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Secretary,

Congested Districts Board.

APPENDIX V.

Enclosure for Letter No. 9.

TREASURY CHAMBERS,

17*th May*, 1907.

SIR,

I have laid before the Lords Commissioners of His Majesty's Treasury Sir J. Dougherty's letter of the 18th ultimo (8252), transmitting by direction of His Excellency the Lord Lieutenant the Estimates of the Congested Districts Board for Ireland for 1907-8.

My Lords observe that the estimated liabilities of the Board on the 31st March next exceed the estimated assets (excluding the general cash balance) by £32,000, a result which this Board attribute in part to the increased percentage of loss on estates purchased since the passing of the Act of 1903, and in part to insufficiency of funds.

But My Lords have already in previous letters called attention to the obligation which rests upon the Congested Districts Board, as upon all other public Departments, of confining their operations within the limits imposed by the funds supplied them by Parliament, and Their Lordships must therefore ask for a full statement, by way of forecast of the position for 1908-9, and if necessary for later years, showing how it is proposed, on the basis of the existing resources of the Board, to balance the statement of Assets and Liabilities.

My Lords observe also that the Board in their letter of the 15th October last stated that, until the result of the Royal Commision on Congestion has been announced, they would not purchase further lands except such as may be specially suitable for their purposes, and they estimated that £50,000 would cover such special cases. But the estimate of the Board's requirements for Land Purchase for this calendar year as submitted to the Estates Commissioners was £670,000. No explanation is given of this apparent change of policy; nor can My Lords understand (in view of the figures given in your letter (5384) of 11th May, 1906, and its enclosures) how the Board can hope with their existing resources to deal with fresh purchases to anything like this extent.

Unless My Lords can be satisfied on the above points, They would not feel justified in sanctioning the Estimates for 1907-8 as submitted.

I am, Sir,

Your obedient Servant,

G. H. MURRAY.

The Under Secretary,
Dublin Castle.

Letter No. 10.

CONGESTED DISTRICTS BOARD FOR IRELAND,

23, RUTLAND SQUARE, DUBLIN,

17*th June*, 1907.

SIR,

I am directed by the Congested Districts Board to acknowledge the receipt of Sir James Dougherty's letter of the 23rd ultimo, enclosing copy of Treasury letter of the 17th idem on the subject of the Board's Estimate for 1907-8.

The Board desire to refer briefly to the preceding correspondence in order to make the present situation more clear and definite. The Secretary to the Treasury in his letter of 8th August, 1905, criticising the Board's Estimate of Receipts and Expenditure for 1905-6 suggested to the Lord Lieutenant that the Board should be restricted from entering into agreements for the purchase of any more estates until it should appear that the purchase money could be provided within a reasonable time from the date of the agreement in each case, and until the estates already bought, or agreed to be bought, had been so far disposed of as to make it clear that the Board might safely embark on fresh transactions.

In considering these instructions from the Treasury, the Board in its letter of the 9th October, 1905, discussed the extent of its Land Purchase operations both before the Act of 1903 and afterwards, up to the date of the letter, and indicated the sources from which the money necessary for the improvement of the estates before resale would be available. The gist of the Board's explanation was that (1) the re-sale of the estates purchased before the Act of 1903 came into force would be completed by the 31st March, 1906, and would leave the Board in possession of £64,382, which would then be available for dealing with the estates bought under the Act of 1903; (2) with this sum of £64,382 in addition to the Board's normal income it was estimated that the Board would be able to carry out the necessary improvement works on these estates for the ensuing two years on the estates bought under the Act of 1903 (representing in value about £1,200,000), and with further purchases to the extent of £300,000 in each of the years 1906-7 and 1907-8.

The preceding estimate of receipts for the year 1906-7 has not been realised owing to delays in clearing the sales through the Land Commission, and difficulties incident to the sale of the estates, and it may be stated broadly that the £64,382 has not been realised, but it falls for realisation in the current year, as shown in the Budget Estimates already submitted to the Treasury.

For the last year, therefore, the Board's operations in preparing for sale the estates purchased since 1903 have been greatly restricted. It was estimated that estates to the value of about £600,000 would be prepared for re-sale in the current year, but it is improbable that this estimate will be worked up to owing to the Board's ordinary income, supplemented by the recoveries on re-sale, as explained above, being inadequate to its wants.

In view of this curtailment of their available means for dealing with property after purchase, the Board have restricted their purchases in the last year to £108,861, instead of £300,000, and in the current year they have arranged terms for the purchase of only £78,000 worth of estates, which were, in the opinion of the Board, of a desirable character to acquire.

The Board fully appreciate the necessity of restricting its purchases if its income is to remain at its present figure, but this hypothesis, in the Board's opinion, ought not to be insisted upon. I am to forward *herewith copy of a resolution which the Board recorded at their meeting yesterday*, and to invite for it the earliest attention. It is not too much to say that on the answer which the Government will give to the Board's application for extended powers of purchase and for an increased income will depend its usefulness as a body in future.

In conclusion, I am to refer to the remark in the Treasury letter that the inclusion of the sum of £675,000 in the estimate for the Land Commission in December last as the amount of advances which the Board might require during the current year indicated a change of policy on their part and an intention to purchase land far beyond the limit of £300,000 suggested for this year in their letter of 9th October, 1905. I am to explain that of the sum of £675,000 a sum of £130,000 was for advances to tenants on re-sale of estates purchased before the Act of 1903, while £363,000 was for the payment for estates which had been already bought, and which were included in the £1,200,000 worth of property in hand. Only £182,000 were for new purchases, which was obviously well within the £300,000 limit previously referred to.

I am further to observe that the £50,000 referred to in the same paragraph of Their Lordships' letter of 17th May must be taken as an addition to the £184,764 mentioned in the Board's previous letter of 15th October, the resulting aggregate of £234,764 being the limit to which the Board desired to work up to in that year. As pointed out above, the Board in point of fact only purchased estates worth £108,861 last year and £78,000 this year. It will therefore be evident that the limits proposed under the circumstances then existing, whether by the Board or by the Treasury, have not been exceeded.

Finally, in reference to the Treasury demand for a forecast of the position in 1908-9, I am instructed to say that the Board find it impossible to make any forecast at this time of what their precise financial position will be in the ensuing year. This much, however, may be said, that if the £64,382 recoverable on the re-sale of estates purchased before 1903 are brought to account this year, and expended as in the estimate, the amount which the Board can lose on the improvement of estates before re-sale will apparently not exceed £11,000, and that its funds must therefore be altogether inadequate for effective work next year.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,

Dublin Castle.

CONGESTED DISTRICTS BOARD FOR IRELAND.

Resolution passed by the Congested Districts Board on 14th June, 1907:—

At the meeting held to-day the Board had under consideration the correspondence which passed between the Treasury, the Irish Government, and the Board since August, 1905. Without entering into details, the Board find the effect of this correspondence to be a limitation to some £11,000 per annum of their income available for the improvement of uneconomic holdings and for the migration of tenants, and consequently a practical suspension of their purchase operations. This limitation and the consequent suspension may have been desirable last year when conditions in the Congested Districts were different from what they are at present. But the circumstances of the country are now such that the maintenance of this suspension of the Board's activities will, beyond doubt, have a most injurious effect not only upon the operations and influence of the Board, but upon the peace of the scheduled districts. The Board are clearly of the opinion that the circumstances of the time call, not for a restriction, but for a large ex-

APPENDIX V.

tension of purchase operations in Connaught, especially in regard to grass lands. The Board may hold grass land up to the value of a million sterling for five years, paying interest only on the purchase money, and they have no doubt that they can easily recover such interest and more from the grazing even if they considered it desirable not to distribute the land earlier. They consider that they should be enabled forthwith to enter into negotiations with landlords of grass lands who are willing to sell, at all events to the extent of £500,000 within the current year. They also consider that their operations in regard to the purchase of ordinary tenanted and congested estates should proceed up to at least the average of purchases for the previous three years. There are many congested estates which they should acquire *pari passu* with the acquisition of the grass land. While the Board consider that their liberty to purchase should thus be restored to them, they are also clearly of the opinion that the funds available for the improvement of estates should be correspondingly increased—in other words, that the £11,000, now available for this purpose, should be increased to not less than £50,000. It is to be remembered that this work of land purchase, migration, and improvement must be done at one time or another, or by one department or another, and that it is in truth an economical procedure and one urgently called for by the actual condition of the country to do the work expeditiously rather than prolong it over a series of years. In conclusion, the Board cannot too earnestly press upon the attention of Government the serious state of portions of the scheduled districts subject to their jurisdiction, and the urgent necessity which exists for the immediate application of the remedial measures indicated above.

Letter No. 11.

23, RUTLAND SQUARE, DUBLIN,

20th July, 1907.

SIR,

With reference to the letter of the Congested Districts Board dated 15th ultimo, forwarding for the consideration of His Excellency a resolution on the subject of the purchase of land for the relief of congestion and on the state of their funds, I am directed to transmit herewith a copy of a further resolution passed at a meeting of the Board on the 19th inst., and to request that His Excellency may be pleased to recommend the matters referred to in these resolutions to the favourable consideration of the Lords Commissioners of His Majesty's Treasury.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,
Dublin Castle.

Resolution passed by the Congested Districts Board on 19th July, 1907:—

Read again the resolution recorded by the Board at their meeting on the 14th June. Although no answer to the points submitted by the Board in that resolution has yet been received from the Treasury the Board are informed by the Under Secretary, who presided at to-day's meeting, that the Treasury are willing that they should proceed with the purchase of those grass lands which are most suitably situated for their purpose, and which, having regard to the conditions prevailing in the West, it is most desirable to acquire at the earliest date.

The Board desire to impress upon the Irish Government the great necessity which exists of altogether removing the embargo upon the operation of their general powers of purchase, and while appreciating the relaxation of previous restrictions in regard to the purchase of grass lands they desire to bring under special notice the fact that in regard to property valued at £415,450, negotiations had been begun and had proceeded to a considerable length before this restriction had been imposed. While admitting the great desirability of buying those grass lands at once, the Board think it clear that owners of estates with whom negotiations have been entered into will find a legitimate ground for complaint if the purchase of their estates is postponed while other properties are purchased. Such action would tend to have an unsettling effect upon the general purchase operations of the Board.

The Board also desire to point out that lands which ought to be sold to them are passing to tenant purchasers in an unimproved condition, whereby the security of repayment of Government loans is seriously imperilled and congestion is stereotyped.

In conclusion, the Board again desire to express their satisfaction at the statement as regards the purchase of grass lands made to them by the Under Secretary, and they trust that the necessity upon which they dwelt in their resolution referred to above for an adequate increase in their funds will now receive equally sympathetic treatment from the Treasury.

Letter No. 12.

CONGESTED DISTRICTS BOARD FOR IRELAND,

23, RUTLAND SQUARE, DUBLIN,

12*th August*, 1907.

Purchase of Estates.

SIR,

I am directed by the Congested Districts Board to again call the attention of Government to their resolution of 20th ultimo, which pointed out that the Board had entered into negotiations for the purchase of estates estimated to cost £415,450.

While the Board have gladly acknowledged the authority given them to proceed with the purchase of grass lands necessary for the relief of congestion, and are taking steps to effect such purchases, they feel they would be wanting in their duty if they did not very earnestly press on the Government the necessity of also completing the purchase of those estates, in reference to which negotiations have been suspended. It must be remembered that the Board can only utilise the grass lands for enlarging uneconomic holdings, and that this presupposes the purchase of such holdings on a large scale. It is true that the Board have on their hands congested estates, but they desire to purchase more.

The Board therefore trust that His Excellency may be pleased to represent to the Lords Commissioners of the Treasury the very great importance of allowing them liberty to proceed with the purchase of those tenanted estates in the congested districts, at all events, those estates in respect of which negotiations had been begun before the orders suspending the Board's purchase operations had been issued. The estimated purchase price of those estates is about £400,000. It is probable that only a small portion of this sum would require to be issued during the current financial year.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,

Dublin Castle.

Letter No. 13.

CHIEF SECRETARY'S OFFICE,

DUBLIN CASTLE,

2*nd September*, 1907.

SIR,

With reference to your letters of the 17th June, 20th July, and 12th instant, dealing with questions of land purchase, I am directed by the Lord Lieutenant to transmit, for submission to the Congested Districts Board, copy of a letter from the Lords Commissioners of His Majesty's Treasury authorising the Board to open negotiations with the owners of grazing lands which they desire to acquire for the purpose of enlarging uneconomic holdings.

I am, Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Secretary,

Congested Districts Board.

APPENDIX V

Enclosure in Letter 13.

TREASURY CHAMBERS,
29th August, 1907.

SIR,

With reference to your letters of the 17th June, 20th ultimo, and 20th instant (13229, 16101, 17924), I am directed by the Lords Commissioners of His Majesty's Treasury to request you to inform His Excellency the Lord Lieutenant that they authorise the opening of negotiations by the Congested Districts Board with the owners of the grazing lands which it is desired to acquire for the purpose of enlarging uneconomic holdings. My Lords presume that the Board will proceed with the utmost caution in these negotiations, and will not go beyond the absolute necessities of the moment.

When the negotiations have made sufficient progress My Lords would be glad to receive a report on the subject before any purchases are finally decided on, and to be informed of the approximate amount involved in the transactions, both for purchase and for loss on re-sale.

As regards the general question of an increase in the income of the Congested Districts Board for the purpose of improving estates, My Lords are not prepared to arrive at a decision until They have before Them the Report of the Commission which is now enquiring into the operations of the Board.

I am, &c.,

G. H. MURRAY.

The Under Secretary,
Dublin Castle.

Letter No. 14.

CONGESTED DISTRICTS BOARD FOR IRELAND,
23, RUTLAND SQUARE, DUBLIN,
16th September, 1907.

SIR,

I am directed by the Congested Districts Board to state that at their meeting to-day they considered Sir James Dougherty's letter of the 2nd instant, enclosing copy of a letter dated 29th ultimo from the Lords Commissioners of the Treasury in reply to the Board's application of the 12th August for authority to proceed with the purchase of estates, containing both tenanted and untenanted land for which negotiations have been commenced.

I am to express the Board's great regret that the Lords Commissioners of the Treasury have ignored the strong remonstrance made by the Board against the total suspension of their purchases of the tenanted estates referred to in their letter of the 12th ultimo, for which negotiations had been entered into, and the owners of which are pressing for definite replies to their offers to sell.

In some cases the tenants are aware that their landlords have offered their estates to the Board, and there is good reason to believe that the rents will be withheld if no steps are taken to purchase. I am to enclose a copy of a Report furnished to the Board by their Chief Land Inspector, Mr. Henry Doran, calling attention to the urgent necessity of proceeding with the negotiations in some of these cases.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,
Dublin Castle.

Enclosure in Letter No. 14.

Re Provision of Purchase Money of Estates.

SECRETARY,

The Treasury letter, of which you sent me a copy, appears to convey that the Board cannot make any purchases, except of estates comprising untenanted lands.

If this be so, and that the Board must now abandon the negotiations opened for the purchase of such very desirable estates as the Lynch-Blosse, E. Thomas O'Donel, O'Conor's of Cloonmore, M'Dermott, and others on the list submitted to the Treasury, I feel it necessary to inform the Board that in my opinion if they withdraw from negotiations for

the purchase of these estates it is certain there will be a refusal by the tenants, except perhaps in the case of the Lynch-Blosse, to pay rents at the approaching collection in November, and there will probably be serious disorder in the districts in which they are situate.

The owners have offered to sell these estates, and the tenants are very anxious to buy. There is a considerable area of grass lands on each of these estates which can be acquired for the enlargement of holdings.

There has been a police hut on one of the grass farms on the Cloonmore (O'Conor's) estate for several years past, and the agent has several decrees against the tenants for rent unpaid.

The Board are tenants of four grass farms on the E. T. O'Donel estate, which they acquired the occupation interest of from three to seven years ago in anticipation of acquiring the fee-simple, and on several occasions in reply to Parliamentary questions it has been stated that the Board intended to offer for the estate, and had taken the necessary preliminary steps in the Land Judge's Court to lodge their offer when the estate was ready for sale.

After waiting for several years the estate was not offered to them until a couple of months ago, and it will be a very objectionable proceeding if they are now compelled to withdraw from negotiations.

I may also point out that except in Land Judge's cases, such as O'Donel and M'Dermott estates, no money would be required either for purchase or improvement expenditure for at least six months after terms of purchase have been agreed upon, as the legal proceedure, preliminary to vesting of estates, usually takes six to twelve months.

H. DORAN.

12/9/07.

Letter No. 15.

DUBLIN CASTLE,
30*th October*, 1907.

SIR,

With reference to your letter of the 16th ultimo in continuation of previous correspondence on the subject of the purchase of estates by the Congested Districts Board, I am directed by the Lord Lieutenant to state, for the Board's information, that a further letter has now been received from the Lords Commissioners of His Majesty's Treasury, in which Their Lordships explain that They considered it probable that the Estimates for 1907-8 would require some modification in the light of further knowledge as to the rate of progress in the improvement and re-sale of land which would be gained during the year.

Their Lordships also point out that since the Estimates were submitted your Board have been given authority to turn their attention to negotiations for the purchase of grazing lands (Treasury letter of 29th August last, communicated to the Board by letter from this office of 2nd September); and Their Lordships think it desirable, before considering the Estimates further, to await the report asked for in the second paragraph of that letter, in order that the financial position may be more clearly defined.

Their Lordships further point out that the Board's statutory income has been fixed by Parliament at a total of £86,250 under the Acts 54 and 55 Vict., cap. 48, sect. 35, 62 and 63 Vict., cap. 18, sect. 5, and 3 Edw. VII., cap. 37, sect. 38, and they conceive that they have no power, without further legislation, to increase that income. They feel, therefore, bound, in considering the annual Estimates submitted by the Board, to see that the proposed expenditure does not exceed the income available.

Their Lordships, therefore, remain of opinion that the Board's purchases should continue to be regulated by the extent of the resources at their disposal; but, provided that this limitation is kept in view, they see no reason why negotiations for the purchase of further properties should not be carried on, subject to the understanding that purchases could only be completed as the necessary funds for improvement, &c., become available.

Their Lordships also express the opinion that, in view of the present difficult conditions under which money is raised for the Irish Land Purchase Fund, involving such serious demands upon the Guarantee Fund, and ultimately on the Irish ratepayers, no steps should be taken which would have the effect of accelerating advances beyond the rate which is absolutely unavoidable.

I am,

Sir,

Your obedient Servant,

J. B. DOUGHERTY.

The Secretary,
Congested Districts Board.

APPENDIX V.

Letter No. 16.

Memorandum sent by direction of the Congested Districts Board to the Chief Secretary.

Board's Funds, 1907-8.

At the meeting of the Congested Districts Board on the 8th November—the Chief Secretary being in the chair—the necessity of revising the year's Estimates and of providing further funds was under consideration. The Secretary was directed to prepare a Revised Estimate for the Treasury in readiness for the next meeting, fixed for the 13th December.

The financial statement submitted showed that the receipts from the re-sale of estates had since 1st April last amounted to only £34,000 out of a total of £158,000 in the year's Estimates, which included (*a*) £35,000, the "enhanced value" on sales amounting to £658,498 of estates purchased under the Land Act of 1903, and (*b*) £123,000 receivable in cash for the balance of estates purchased before the passing of that Act.

It has not, however, been found possible, up to the present date, to make final arrangements for the sale of more than £200,000 worth of holdings in class (*a*), and, although almost all the estates in class (*b*) are ready for sale, £48,000 of agreements remain to be signed by the tenants.

The result is that it seems very probable that the £35,000 will not be obtained in cash until after 31st March next, and that a considerable portion, perhaps three-fourths of the £48,000, may be in the same position, as it cannot be at present ascertained when these agreements will be fiated. There may be a maximum deficiency of £71,000.

The Estimate for 1907-8 provides for the repayment of £50,000 principal to the Board of Works, including £46,000 borrowed under the former Treasury Regulations, under which the Board were not compelled to repay when an estate was completely sold, the entire sum borrowed for that estate. If this amount, £46,000, be retained until after 31st March next the probable cash deficiency on the current year will be £25,000, and unless the Board are enabled to borrow about £25,000 they will have to suspend operations on their estates.

The stoppage of the improvement works in the middle of the winter months, when all the people are at home, and in a bad season, would be disastrous both to the Board's usefulness and to the peace of the many districts, in all the congested counties, which would be affected.

The Board think it right to mention the fact that two years have elapsed since they drew attention to the necessity of more funds to enable them to make better progress with migration and the enlargement of holdings, and in each of the past two years the works on their estates have been partially suspended for want of funds—the Board having under the Treasury Rules to provide one-third of the expenditure on improvements out of their own funds, and as the amount of land in hands has increased in spite of the reduced amount purchased in each year, the lack of funds has been severely felt.

In the Board's letter of 15th April last, addressed to the Under Secretary, forwarding their Estimates for the present year, they stated as follows:—

"The Board intend to proceed as far as possible with the preparation of the estates for sale, but they cannot *even on the favourable view* of the probable re-sales which has been taken in the Estimate, and after borrowing the full amount that the regulations permit, provide for more than 70 per cent. of the required expenditure on improvements they desire to carry out in the year, and at its close their liabilities in respect of estates will exceed the assets by about £32,000."

F. W. D. MITCHELL,
Secretary,

23 Rutland Square, Dublin.
28*th November*, 1907.

Letter No. 17.

DUBLIN CASTLE,
16*th December*, 1907.

SIR,

With reference to the discussion at the meeting of the Congested Districts Board on the 8th ultimo relative to their funds, I am directed by the Lord Lieutenant to transmit, for the information of the Board, copy of a letter from the Lords Commissioners of His Majesty's Treasury on the subject.

I am,
Sir,
Your obedient Servant,
J. B. DOUGHERTY.

The Secretary,
Congested Districts Board,
Dublin.

Enclosure in Letter No. 17.

TREASURY CHAMBERS,
13th December, 1907.

SIR,

I have laid before the Lords Commissioners of His Majesty's Treasury Sir J. Dougherty's letter of the 4th instant (No. 26871), in which His Excellency the Lord Lieutenant recommends an application from the Congested Districts Board for a loan of £25,000 in order to meet the cost of improvement works, which will not be covered by other receipts of the Board.

It is explained that, in addition to the sum of £47,000 proposed to be borrowed from the Board of Works in respect of improvements, the estimated receipts of the Board contained items of—

(*b*) Resale of estates under Land Act, 1896. Amount of advances paid to Board by Land Commission under Treasury Rule 26 (1), including refund of Sinking Fund, £123,000.

(*a*) Resale of estates under Land Act, 1903. Payments by Land Commission under Section 72 (3) and Treasury Rule 28, £35,000. Total £158,000, which would have been applicable to works of improvement but that the amount expected to be realised in respect of these items within the financial year is—

(*a*) Nil.

(*b*) £87,000, leaving an estimated total deficit of £71,000. The failure to realise this sum is apparently due to delay in concluding the arrangements with tenant purchasers, and appears to have no connection with the alleged insufficiency of the Board's income, to which the Memorandum of the Board alludes.

My Lords do not know as regards item (*a*) why, if final arrangements have been made for the sale of £200,000 worth of estates, or nearly a third of the £658,498, purchases under the Act of 1903, no part of the £35,000 should be received during the year.

As regards the proposal of the Board to borrow £25,000, I am to say that My Lords are not aware of any source from which such a loan could be made, as They do not regard the power to borrow from the Local Loans Fund under section 40 (6) of the Purchase of Land (Ireland) Act, 1891, as applicable to the circumstances, the application of the Board being practically one to overspend its income during the year by the amount of the suggested loan.

In Their Lordships' opinion the only remedy is for the Board to confine its expenditure within its available income. If this is not done, and if the Comptroller and Auditor-General should report to this effect on the accounts of the Board, the responsibility of defending before the Public Accounts Committee the action taken will rest exclusively upon the Irish Government and the Board.

I am, etc.,
G. H. MURRAY.

The Under Secretary,
Dublin Castle.

Letter No. 18.

CONGESTED DISTRICTS BOARD FOR IRELAND,
23, RUTLAND SQUARE, DUBLIN,
31st December, 1907.

SIR,

I am directed by the Congested Districts Board to state that they had under consideration to-day the Treasury letter, dated 13th instant, relative to their funds, forwarded with your letter of 16th instant. While the Board agree that it is very unfortunate that their anticipations in regard to the re-sale of their estates have not been realised, they desire to point out that the conclusion of arrangements with tenant-purchasers is only postponed, and that the money they expected to have realised on re-sales will come in during the next year. In the meantime the only way in which the Board could comply with the advice given in the Treasury letter to confine its expenditure within its available income would be by stopping immediately all improvement works on their estates. I am to point out, however, that if the improvement works were stopped the preparation of estates for re-sale would be delayed a year, as little work could be done during the summer. This delay would affect all the estates now in hands, and would disarrange the Board's finances for the ensuing and possibly later years. It would also directly conduce to unrest on the estates, as tenants would resent being retained in the position of tenants for the time the outlay would entail.

Under these circumstances I am directed to again request that the urgent necessity of the issue of a loan of £25,000 from some source may be represented to the Lords Commissioners of the Treasury; otherwise the improvement works must be closed on the 15th January.

I have the honour, &c.,
F. W. D. MITCHELL.

The Under Secretary,
Dublin Castle.

APPENDIX V.

Letter No. 19.

TREASURY CHAMBERS,

WHITEHALL, S.W.,

4th January, 1908.

DEAR SIR ANTONY,

I have been considering the question which you mentioned when you were here a few days before Christmas—namely, whether there is any way of helping the Congested Districts Board out of the financial difficulties into which they have got through following the course which (I must say) we have always protested against—namely, trying to do too much at once, and consequently not being able to pay their way.

I have also got your official letter of 2nd instant submitting the question of a loan for reconsideration. I am afraid, however, that it does not contain anything which will help us to do what is asked.

We are bound by the Act of 1891 (which makes the Board's Estimates subject to our control) to see that their transactions are kept within their resources, and we have therefore been obliged to withhold approval of the Estimates for 1907-8 until it is shown how they can be balanced. No attempt has been made to do this, and I think I ought to say at once that if we are to help the Board, the Board must conform to the directions of the Act of 1891, submit their Estimates to us in such form as we can approve, and confine their proceedings within such approved Estimates.

The first thing therefore that we shall have to ask for is a *revised* Estimate of the Income and Expenditure of the Board for 1907-8, accompanied by a statement showing (*a*) the price of Estates already bought this year, (*b*) the probable purchases in the course of the year, and (*c*) the position as regards estimated amount of improvement money which will remain to be spent in 1908-9 and future years on estates still in hand on 31st March, 1907, and how it is proposed to provide for it.

In the next place we should like a clear declaration from the Irish Government that, if we came to the aid of the Board, you will insist with them that, unless and until their income is increased, they shall enter into no new transactions until they have balanced their income and expenditure, and shown that they will again have income available for the purpose of taking in hand other estates, so that the present position shall not recur.

In this connection let me remind you of two things. The Board told us on 15th October, 1906, that they had decided that they would not, until the result of the Royal Commission on Congestion has been announced, purchase further lands, except such as may be specially suitable for their purposes, and they estimated that £50,000 will cover such special cases. Have the Board adhered to this pledge?

Again I may refer to the Board's letter of *9th October*, 1905, in which they told us they anticipated that all the estates bought before the passing of the Act of 1903 would be sold before the end of 1905-6, or early in the following year, and that the Board were then ready to prepare for sale the properties bought under the new Act. Yet the Board's memorandum of *28th November*, 1907, said that there was still £35,000 for enhanced value and £123,000 receivable in cash for the balance of estates purchased before the passing of the Act of 1903. I cannot understand this discrepancy between the two statements. I mention it because it will give you some idea of the difficulties we feel in dealing with proposals from the Board.

I come now to the possible method (if any) in which the Treasury can assist you. We have, as we stated in our reply to you, and as I told you when you were here, no fund from which we could make a loan; nor have the Land Commission any power to advance you money before it can be paid under the Rules under the Act of 1903. The only possibility therefore is by a loan from the Board of Works under the system which allows the Congested Districts Board to borrow for improvements. And here I may refer to the Treasury letter of 28th February, 1906, in which we made you an offer in those terms:—

"My Lords have a further suggestion to make which they hope will convince His Excellency that, so far from wishing to interpose unnecessary difficulties in the exercise by the Congested Districts Board of its legitimate functions, they are anxious to help them to the utmost extent compatible with the principle above contended for. At present it is the rule that one-third of the money spent upon improvements must be found out of the Congested Districts Board's own income, and only two-thirds borrowed from the Board of Works. If His Excellency and the Congested Districts Board would agree that, along with the Board's Estimates for any year, there should be submitted to the Treasury an estimate of the maximum amount to be asked for (subject to its being possible to allocate that amount out of the Irish Land Purchase Fund) for the purchase by the Board of estates or untenanted land in the year, and that this estimate, like the Board's Estimates of income and expenditure, when once approved by the Treasury, should not be exceeded without the sanction of My Lords, they would be prepared to withdraw the condition as to the expenditure of one-third of the improvement money out of the Board's own funds, and to allow the whole of the recoverable expenditure on such improvement work, as those for which the Board of Works could lend to other borrowers under the Land Improvement Acts, to be borrowed from that Board. It is clear that this arrangement would set free considerable sums otherwise chargeable on the Congested Districts Board's own funds, which could then be applied to the other purposes of purchasing tenants' interests, tenant purchasers' farms, etc., and of meeting losses."

This offer was in our judgment a reasonable one, and the conditions were obviously the only conditions that could secure the effective carrying out of the financial provisions in the Act of 1891. No notice appears to have been taken of this offer. But it is still open if the Irish Government will give us such an undertaking as we asked for in the passage I have quoted; and it seems to me to indicate the only means by which we could assist you out of your present difficulties.

But there are further conditions which I think would be desirable both in the interests of the Board and the Treasury. It seems to us that all the difficulties of the Board are due to trying to do too much at once, *i.e.*, spreading improvements over too many estates at the same time, and so keeping them *all* an unreasonable time in hand. I think therefore that it should be a condition that any money which can now be made available should be spent on a *few* estates only, with a view to getting them resold quickly, and that the loan should be repaid in 1908-9 out of the proceeds of sale.

I shall be glad to know whether you can see your way to meet us in the manner which I have indicated. In that case the Treasury would, I think, be prepared to enlarge your borrowing powers from the Board of Works, so as to relieve your present difficulties.

Very truly yours,

G. H. MURRAY.

Letter No. 20.

CONGESTED DISTRICTS BOARD,
23, RUTLAND SQUARE, DUBLIN,
13*th January*, 1908.

SIR,

I am directed by the Congested Districts Board to state that at their meeting on the 10th instant they had before them a semi-official letter addressed by Sir George Murray to Sir Antony MacDonnell on the subject of the Board's application for a special loan of £25,000, and in reply I am to state as follows:—

I. A Revised Estimate for the current year was prepared last month, but was withheld pending the decision of the Lords Commissioners of the Treasury as to the loan above mentioned. This Estimate is now enclosed.

II. (*a*) The price of estates already agreed to be bought this year is £98,485. The Board, in deference to the views expressed by Their Lordships, have decided to purchase no more tenanted estates this year, but they have to report that acting with the special sanction of the Treasury, they have made offers for £94,700 to owners of grass lands in County Roscommon, and they now request authority to negotiate for further grass lands to the extent of £100,000.

(*b*) Including these three items, the probable purchases which may be made in the current year would amount to £293,185. In connection with the total prices of tenanted estates agreed upon in the past and the present financial years, the Board desire to explain that in their letter of the 15th October, 1906, in reference to the Estimates for 1906-7, they proposed to purchase £234,764 worth of estates, including the £50,000 mentioned in Sir George Murray's letter. The amount actually agreed upon in that year was £108,219, and adding £98,485 for purchases already concluded in 1907-8, the total is £206,704, against £234,764, mentioned on 15th October, 1906. The Board have therefore adhered to the pledge given in that letter. The arrangements for purchase of grass lands were subsequently sanctioned.

It was contemplated by the 74th Section of Land Act of 1903 that the Board might have in their hands at one time a maximum of £1,237,500 worth of untenanted land, but at present, after the Act has been in operation four years, they have only £326,700 worth of untenanted land vested in them and unsold.

(*c*) The amount of improvement money which will remain to be spent in 1908-9 and future years on estates in hand on 31st March, 1908, including the purchase of tenants' interests, will be about £120,000. Deducting £37,000 recoverable on the resale of the remaining holdings on the 1896 Act group of estates, there will remain £83,000 which can be provided out of the Board's existing funds by spreading the expenditure over four, or, at the outside, five years, and exercising economy in other schemes.

III. The expectation expressed by the Board in their letter of 9th October, 1905, that the older estates would be completely sold in 1905-6 or early in the following year has not been realised owing to various unforeseen circumstances, viz.:

(1) Several estates have been retained until untenanted land could be purchased for enlarging the holdings (Vesey Stoney, Dillon, Darcy, Lucan, etc.).

(2) Holdings in towns were retained while there was a possibility of the position of sub-tenants being improved by the Town Tenants Act.

(3) Local opposition to migrants has prevented the sale of several farms.

(4) Some tenants objected to the Board's terms, and refused to buy.

(5) Difficulty in clearing title from intervening interests.

The balance receivable from these old estates was then estimated at £123,000. The further sum of £35,000 mentioned in Sir George Murray's letter was for estates bought under the Act of 1903.

APPENDIX V.

IV. The offer made by the Treasury in their letter of 28th February, 1906, that if the Board would agree to limit their purchases to a definite figure each year the Treasury "would allow them to borrow the whole cost of recoverable improvement works," was not accepted by the Board, as it would not have been of any advantage to them, inasmuch as they already had power to borrow up to the amount of the recoverable expenditure, that is, the "enhanced value," which, as a general rule, represents only one-third of the expenditure on improvements.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,
Dublin Castle.

Letter No. 21.

DUBLIN CASTLE,

Immediate. *7th February,* 1908.

SIR,

With reference to previous correspondence on the subject of the application of the Congested Districts Board for a special loan of £25,000, I am directed by the Lord Lieutenant to transmit, to be laid before the Board, a copy of a further letter from the Lords Commissioners of His Majesty's Treasury on the subject, and I am to suggest that the letter is one calling for the earliest attention possible.

I am,

Sir,

Your obedient Servant,

F. J. CULLINAN.

The Secretary,
Congested Districts Board.

Enclosure in Letter No. 21.

TREASURY CHAMBERS,

6*th February,* 1908.

SIR,

With reference to your further letter (789) of 14th ultimo and its enclosures on the subject of the request of the Congested Districts Board for a temporary loan of £25,000, I am directed by the Lords Commissioners of His Majesty's Treasury to request you to inform His Excellency the Lord Lieutenant that the only method which they consider open to them of assisting the Board would be by an advance from the Civil Contingencies Fund to be repaid within a short time.

But before the advance of the sum of £25,000, if so much were available, or any less sum can be sanctioned, it is necessary that My Lords should have further information and further assurances on certain points. My Lords must in the first place ask for (1) a statement showing the actual income and expenditure of the Board from 1st April, 1907, to the most recent date to which the accounts can be made up, say, if possible, the 1st instant; (2) an estimate of the further sums (*a*) to be received, (*b*) required for expenditure under all the heads in the Estimates up to 31st March, 1908; (3) an undertaking by the Congested Districts Board that the £25,000 or any less sum advanced will be repaid within the first three months of the financial year 1908-9 with a statement showing out of what specific sums to be received from the Land Commission or otherwise before 30th June, 1908, the advance will be repaid, or what arrangement will be made to earmark so much of the said specific receipts as may be required, so that repayment within the time mentioned will actually be secured.

In addition to the above requirements it will be necessary that My Lords should be satisfied that the present temporary emergency which it is proposed to meet by the suggested advance will not recur, but that the Board will be able to balance their income and expenditure for 1908-9 without asking for further assistance of the kind. My Lords must therefore ask for a forecast of the income and expenditure of the Board for 1908-9 showing that this will be the case, and for an undertaking by the Board that they will keep within the figures to be submitted.

As regards the Revised Estimates, 1907-8, enclosed in your letter, My Lords observe a reduction in expenditure as compared with the original Estimates of £14,000 on account of the purchase of tenants' interests (which is, however, only postponed), but beyond this, notwithstanding the immediate pressure and difficulty as to finding funds for expenditure on improvements, they do not find evidence of any endeavour to curtail expenditure in other directions to any material extent, except indeed by postponing the repayment of large sums due to the Board of Works. On the other hand, Their Lordships observe that the Congested Districts Board have found it possible to insert such items as £2,930 for "the purchase of two Motor Cars, &c.," and £2,500 for a Steam Drifter.

I am,

Sir,

Your obedient Servant,

G. H. MURRAY.

Letter No. 22.

CONGESTED DISTRICTS BOARD,

23, RUTLAND SQUARE, DUBLIN,

18*th February*, 1908.

SIR,

With reference to Sir Frederic Cullinan's letter of 7th instant, enclosing copy of a letter from The Lords Commissioners of the Treasury, dated 6th February, I am directed by the Congested Districts Board to state that the reason why the Board are under the necessity of applying to the Treasury for this advance of £25,000 is the disappointment of their expectation of receiving from the Land Commission £123,000, payable in respect of agreements concerning the estates purchased before the Act of 1903. Agreements covering only £76,000 out of the £123,000 have as yet been deposited with the Land Commission, and the Board expect to receive the whole of the £76,000 before the 31st March. There remains over a balance of £47,000, in respect of which the Board confidently hope that agreements covering £30,000 will be lodged before the 1st June next, and the payment of this £30,000 to the Board will then only depend on the vesting proceedings of the Land Commission. This sum of £30,000 can be earmarked to pay off the advance of £25,000 which the Board ask for from the Treasury. The Board, however, trust that the Treasury will permit this advance to be paid off by instalments, as in the case of other loans. Otherwise their difficulties in the way of preparing a budget for next year, already very great, will be magnified.

The returns called for by Their Lordships are enclosed herewith. They show that the sum provided for the improvement of estates for the year 1908-9 can be no more from the Board's existing means than £25,000, a sum of which is only procured by making no provision for the Parish Committee Works (which the Board regard as a disaster), and by reducing Fisheries, Industries, and Engineering Works to their lowest possible figure. As the income during the first six months will be absorbed by fixed charges, the works for the Improvement of Estates must be suspended from the 1st April next until further funds are obtained.

At least £85,000 will be required if the improvement of the estates now in hand is to be continued, and the Board is to fulfil the functions it was created to discharge. The Estimate shows that to provide this sum an additional grant of at least £60,000 must be placed on the Votes for next year.

With regard to the payments to the Board of Works referred to in the Treasury letter, I am to state that the Congested Districts Board have paid to the Commissioners of Public Works all that has become due under the deeds by which money has been borrowed.

I am to add that the two motors mentioned cost together £800, not £2,900, and that the purchase was decided upon in June last before the necessity for retrenchment became known.

The Board desire to refer to their letter of the 8th October, 1905, in which they stated that unless their income were increased their estates operations must be reduced to a merely nominal figure.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

The Under Secretary,

Dublin Castle.

APPENDIX V.

Letter No. 23.

TREASURY CHAMBERS,

5th March, 1908.

SIR,

I have laid before the Lords Commissioners of His Majesty's Treasury Sir J. Dougherty's letter of the 19th ultimo, further respecting the application of the Congested Districts Board for a temporary loan of £25,000.

My Lords observe that the Board express their readiness to pay off the proposed advance out of a sum of £30,000, which they expect to receive early in next financial year in respect of the resale of Estates purchased prior to the Irish Land Act, 1903; but they ask that, in order to provide for Improvement Expenditure in 1908–9, estimated at £85,000, an additional grant of "at least £60,000" be placed on Votes of Parliament for next year.

In reply I am to state that my Lords cannot now consider the provision of any additional funds in excess of their statutory income for 1908–9 being placed at the disposal of the Board, having regard to the fact that the Royal Commission on Congestion in Ireland has not yet reported; and I am to request you to remind His Excellency that an intimation to this effect was conveyed to the Irish Government in their Lordships' letter of the 28th February, 1906, and repeated in their letter of the 19th June, 1906. It cannot therefore be suggested that the Congested Districts Board were not made aware of their position in this respect.

The Board have also been repeatedly warned that their expenditure must be restricted within the limit assigned to them by Parliament, and very serious responsibility will rest upon them if this elementary obligation is neglected.

I am further to point out that the estimates of the Board's expenditure for the current year have not yet been approved by my Lords, and that by section 40 (6) of the Purchase of Land (Ireland) Act, 1891, the Board are precluded from spending any money except after such approval. In these circumstances it is clear that the whole of the Board's expenditure during the current year (which has already involved them in a deficit) has been incurred without proper authority. My Lords think that, as the Comptroller and Auditor-General will undoubtedly draw the attention of the House of Commons to this state of things, the Irish Government should ascertain forthwith on whom the responsibility rests for the irregularities which have been committed.

As regards the remainder of the current year, I am to state that, before my Lords can sanction any further advances to meet current expenditure, they must ask for a definite statement of the commitments and liabilities of the Board to the 31st instant, showing what expenditure is optional and what is absolutely necessary, with full details as to the precise purposes for which it is being incurred. They observe that, although the Board have asked for a temporary advance of £25,000, the accounts transmitted with your letter of the 19th ultimo show a balance, after allowing for the advance, of about £11,600 carried forward to 1908–9.

I am, Sir,

Your obedient Servant,

G. H. MURRAY.

The Under Secretary,
Dublin Castle.

Letter No. 24.

CONGESTED DISTRICTS BOARD,

23 RUTLAND SQUARE, DUBLIN,

13th March, 1908.

SIR,

I am directed by the Congested Districts Board to state that the letter of the Lords Commissioners of the Treasury dated 5th instant, forwarded to them by the Under Secretary, was read at their meeting to-day.

The Board regret that their Lordships decline to consider the provision of any additional funds for the coming financial year and in this connection they desire to refer to Mr. George Wyndham's Memorandum dated 4th July, 1902, printed at page 336 of the Appendix of the First Report of the Royal Commission on Congestion, from which it will be seen that the Treasury then agreed to an increase of the Board's income in advance of legislation.

If the Board did not expend on improvement works on their estates their expected balance, including economies recently effected under great pressure, the improvement works should be practically discontinued at the beginning of April. The economies effected are as follows:—

Estate Improvements,	£10,000
Technical Instruction (Lace Classes)	1,000
Industries, Grants,	1,000
Piers and Roads,	1,000

The balance shown in the revised estimate which includes £3,000 carried over for Parish Committee Grants promised last summer, would not be available at the end of this financial year did the Board not calculate upon receiving the full loan of £25,000. That loan will enable them to carry on their improvement works, though on a contracted scale, during the current financial year. At the end of the current financial year a practical suspension of their works will be necessary, and no works can be undertaken after 31st May, as is manifest from the revised estimate for 1908–9 (now submitted) which shows that a sum of only £18,000 can be provided under this head, after effecting economies in all branches of their expenditure except in regard to their establishment. Having considered the question of their establishment they have come to the conclusion that it would be highly inexpedient in the public interest to reduce at this stage an

establishment which has been brought to its present level for the purpose of enabling the Board to fulfil the duties imposed upon them by the Act of 1903.

The Board's purchases of land during the past four years have been :—

In	1904–5	£649,544
,,	1905–6	£346,706
,,	1906–7	£108,861
,,	1907–8	£125,885

The rapid reduction here shown has been due to the want of the increased funds asked for by the Board in 1905, while a great expansion of their operations was clearly contemplated in the Act of 1903, which provided that they might hold at one time as much as £1,237,500 worth of untenanted land.

With regard to the excess of expenditure over receipts in the current year the Board beg to point out that they expressed their readiness early in December last to effect immediate economies if the loan then applied for could not be issued. Two sources from which the Board could obtain such an advance are indicated in the Land Purchase Act of 1891. As the Board were not informed that the loan would not be issued they allowed the expenditure to continue, but cannot admit that in these circumstances they are responsible for the difficulty which has arisen since December last.

The enclosed statement shows that in past years the Board's Estimates have never been approved by the Lords Commissioners of the Treasury until after a portion of the year, and in one case a whole year, had elapsed and the expenditure had frequently gone on for several months before the approval of the Estimates was notified to the Board. No objection has been made to this expenditure either by Their Lordships or by the Comptroller and Auditor-General.

No grants to Parish Committees have been provided for in the Estimates for next year, but as about £3,000 promised to these Committees for the current year cannot be paid until after 1st April, 1908, this sum should be carried over in the Board's balance and paid to these Committees early in the coming year, when their accounts are vouched.

The balance of £11,000, referred to by the Treasury, does not exceed the Board's normal requirements at the beginning of a new year, and great difficulty was experienced in carrying on the business last year with a balance of only £4,430.

The statements called for by the Treasury are forwarded herewith.

I have the honour to be,

Sir,

Your obedient Servant,

F. W. D. MITCHELL

The Under Secretary,
Dublin Castle.

STATEMENT showing Dates on which the Board's Estimates were forwarded, and the Dates on which they were approved by the Treasury.

Year.	Date when Submitted.	Date when Approved.
1892–3,	12th March, 1892,	8th April, 1892.
1893–4,	18th May, 1893,	15th June, 1893.
1894–5,	6th March, 1894, 20th April, 1894,	11th May, 1894.

1907–8,	15th April, 1907,	(Not yet sanctioned).

In 13 of the years 23 Revised Estimates were furnished at various dates during the year

Letter No. 25.

TREASURY CHAMBERS,
18th March, 1908.

SIR,

I am directed by the Lords Commissioners of His Majesty's Treasury, to acknowledge the receipt of Sir J. Dougherty's letter (5566), dated 14th instant, but received here late in the afternoon of yesterday, the 17th instant, transmitting, by direction of His Excellency the Lord Lieutenant, a copy of a letter dated 13th instant, with enclosures from the Congested Districts Board

My Lords think it unnecessary to reply at length to the Board's letter, but there are certain statements in it which they cannot allow to pass without immediate comment.

1. The Board state that they expressed their readiness early in December last, to effect immediate economies, if the loan then applied for could not be granted.

The Board's memorandum, enclosed in Sir J. Dougherty's letter of 4th December, is apparently, here referred to, but My Lords find in it nothing that they could interpret in this way. The terms of the memorandum suggested the very contrary, the paragraphs on the subject running as follows :—

> "The stoppage of the improvement works in the middle of the winter months, when all the people are at home, and in a bad season, would be disastrous, both to the Board's usefulness, and to the peace of the many districts, in all the congested counties, which would be affected."

2. The Board state that, as they were not informed that the loan would not be issued, they allowed the expenditure to continue, but cannot admit that in these circumstances, they are responsible for the difficulty which has arisen since December last.

As a matter of fact, the Treasury letter of 13th December to the Irish Government did state that My Lords could not sanction a loan, and that, in Their Lordships' opinion, the only remedy was for the Board to confine their expenditure within their available income.

3. The Board give a list of dates showing how long a time was spent in correspondence in previous years before their Estimates were approved.

The argument sought to be based thereon is irrelevant, because the Estimates for 1907-8 were the first, so far as My Lords are aware, which showed a large excess of liabilities over assets. This made it necessary for My Lords definitely to refuse sanction to those Estimates until the Board showed how they could balance their accounts. The Treasury letter refusing to sanction the Estimates was dated 17th May, 1907, so that the Board had full warning, and every opportunity of satisfying Their Lordships' requirements had they seen fit.

I am, &c.,

G. H. MURRAY.

THE UNDER SECRETARY,
Dublin Castle.

Letter No. 26.

TREASURY CHAMBERS,
4th April, 1908.

SIR,

The Lords Commissioners of His Majesty's Treasury have had under further consideration Sir J. Dougherty's letter (5566) of the 14th ultimo, enclosing copy of a letter from the Congested Districts Board, dated 13th ult., with the Board's revised Estimates for the year 1908–9.

It will be in the recollection of His Excellency the Lord Lieutenant that the Board had already submitted in their letter of 18th February (enclosed in Sir J. Dougherty's letter of 19th February), an approximate estimate of their income and expenditure for 1908–9, upon which the Board stated that on the assumption of an advance of £25,000 being made to the Board in 1907–8 and repaid in 1908–9, they would require an additional grant of £60,000, in order to make the Estimates for 1908–9 balance.

The Board having been informed that My Lords could not consider the provision of any funds in excess of their statutory income for 1908–9, having regard to the fact that the Royal Commission on Congestion in Ireland had not reported, it became necessary for the Board to revise its Estimates for 1908–9, in such a way as to avoid the deficit of £60,000. It would seem that among so many different items of expenditure as are included in the Estimates it should have been possible to make reductions in a number of directions. Yet, My Lords find that the whole £60,000 and £7,000 besides, has been taken off the item of Improvement Works, no other items showing a reduction except that for Technical Instruction (£830), and two others actually showing increases of £3,000 and £2,901 respectively.

The effect of the particular method chosen by the Board of making the necessary reductions is plain ; it is, indeed, indicated in the fourth paragraph of the Board's letter of 13th March stating that "no works can be undertaken after 31st May."

It is not the province of this Board to suggest the items on which reductions should be made in order to find money for improvement works ; but My Lords desire to make it clear that they can accept no responsibility for any stoppage of works consequent on the Board's choosing to restrict the provision for them to £18,000, or any particular figure. If, therefore, My Lords approve of the Estimates for 1908–9, it can only be on the understanding that the responsibility rests entirely upon the Board.

As the suggested advance of £25,000 was not made in 1907–8, but only £3,000 was advanced from the Civil Contingencies Fund, the Estimates for 1908–9 need only provide for the repayment of this £3,000 instead of £25,000. On the other hand, the balance in hand on 1st April, 1908.

will, presumably, for the same reason, be different from the £12,866 for which credit is taken in the Estimates now under consideration.

Before approving those Estimates, My Lords would be glad to be informed (1) what was the actual balance in hand on 1st instant; (2) whether the Board desire, with reference to what has been said above, to alter the Estimates in any other respects.

I am, Sir,

Your obedient Servant,

G. H. MURRAY.

THE UNDER SECRETARY,
Dublin Castle.

Letter No 27.

23, RUTLAND SQUARE, DUBLIN,
15th April, 1908.

SIR,

With reference to the letters from the Lords Commissioners of the Treasury, dated 18th ultimo and 4th instant, respecting the funds of the Congested Districts Board, I am directed by the Board to state that they greatly regret that there should have been any misunderstanding in regard to their application for a loan of £25,000. They desire to assure the Lords Commissioners that while it was their earnest wish to continue the improvement works if funds were obtainable, they were quite prepared to close them as early as the 15th January last if they had clearly understood that the loan could not be issued.

In their memorandum of 28th November last they stated that "unless the Board are enabled to borrow about £25,000 they will have to suspend operation on their estates," and on 31st December, they stated, in reply to the Lords Commissioners of the Treasury, that "the only way in which the Board could comply with the advice given in the Treasury letter, to confine its expenditure within its available income, would be by stopping immediately all improvement works on their estate," and in the same letter again drew attention to the urgent necessity of this loan, and added that "otherwise the improvement works must be closed on 15th January." On the 15th January the Board submitted a Revised Estimate for the year and included the proposed loan in the receipts as they did not understand that it had been refused. Even as late as the beginning of February they were ready to close the works, and would have done so if instructions to the contrary had not been given by the Chief Secretary on the 8th of that month.

The sum of £3,000, lodged to their credit from Civil Contingencies on 12th February, was accepted as an instalment of the loan and the full amount £25,000, was therefore again inserted in a Revised Estimate submitted on 13th March. In order to prevent their account being overdrawn on 31st March, the Board after reducing their expenditure on estates by £10,000 had to postpone payments amounting to £7,000. By this means they closed the year with a balance of £3,500.

With regard to the Statement of Assets and Liabilities referred to in Their Lordships' letter of 17th May, the Board replied fully on 17th June, but did not gather either from the letter of 17th May, or the following letter of 29th August, that Their Lordships called for a Revised Estimate.

In connection with the revision of the Estimates for the current year, I am to explain that the £3,000 mentioned in Their Lordships' letter of 4th instant, is as stated in the Board's last letter, a sum due to the Parish Committees, as part of the grants promised to them last summer, but omitted from the first Estimate owing to a misunderstanding. There is always an arrear in the payment of these grants. £2,901 for Fisheries is not a net increase; the Estimate shows that it is more than counterbalanced by the increased receipts under the same head.

Their Lordships are under a misapprehension as to there being other heads of expenditure which might have been reduced. The Board had, as stated in their letter of 18th February, reduced all charges to the sums to which they were committed, and further economy could only be effected by closing the lace classes or dismissing the staff. The item of £17,000 for tenants' interests is the sum which the Board must pay in order to carry out the re-sales of the estates now in hand.

The Board have considered the question of selling their steamer, the *Granuaile*. The vessel is very useful to the fisheries and the estates belonging to the Board on the west coast, as well as for maintaining communication with the islands. The Board have also reason to believe, that if this vessel were sold, the Department of Agriculture would find it necessary to purchase a second steamer for the prevention of illegal trawling, a duty for which the *Granuaile* is now available.

The adjustments caused by the non-receipt of the balance of the loan of £25,000 have been made on the enclosed Revised Estimate. It has, however, been found impossible to provide more than £33,000 for improvement works during the entire year unless the staff be reduced.

Since the close of the past year the estate accounts have been re-examined and it has been found possible to borrow £20,000 instead of £10,000, as proposed in the previous Estimate. All the estates which have been vested in the Board and on which any money can be borrowed have now been included.

The estimated receipts from re-sale of the older estates has been reduced £10,000, owing to further delay in the re-settlement of the O'Grady Leasehold on the Dillon Estate, purchased by the Board last year, and owing to £2,700 for re-sales having come to credit in March instead of in the new year.

I have the honour to be

Sir,

Your obedient Servant,

F. W. D. MITCHELL.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

WARRANT APPOINTING THE COMMISSION.

EDWARD *R. & I.*

EDWARD THE SEVENTH, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and right well-beloved Cousin and Councillor WILLIAM HUMBLE, EARL OF DUDLEY, Knight Grand Cross of Our Royal Victorian Order;

Our right trusty and well-beloved Councillor SIR ANTONY PATRICK MACDONNELL, Knight Grand Commander of Our Most Exalted Order of the Star of India, Knight Commander of Our Royal Victorian Order, Under Secretary to Our Lieutenant-General and General Governor of that part of Our United Kingdom of Great Britain and Ireland called Ireland;

Our right trusty and well-beloved Councillor SIR JOHN CHARLES READY COLOMB, Knight Commander of Our Most Distinguished Order of Saint Michael and Saint George;

Our right trusty and well-beloved Councillor SIR FRANCIS MOWATT, Knight Grand Cross of Our Most Honourable Order of the Bath, Companion of Our Imperial Service Order; and

Our trusty and well-beloved :—

The Most Reverend PATRICK O'DONNELL, Doctor in Divinity;

JOHN ANNAN BRYCE, Esquire;

WALTER INCH KAVANAGH, Esquire;

CONOR O'KELLY, Esquire; and

ANGUS SUTHERLAND, Esquire, Chairman of the Fishery Board for Scotland;

GREETING!

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland, the working of the Congested Districts Board, and the Land Commission under these Acts, and the relations of the Board with the Land Commission and the Department of Agriculture and Technical Instruction; what areas (if any) outside the districts now scheduled as congested, require to be dealt with as congested; what lands are most conveniently situated for the relief of congestion; what changes in law or administration are needed for dealing with the problem of congestion as a whole, for facilitating the migration of the surplus population from congested areas to other lands, and generally for bettering the condition of the people inhabiting congested areas.

Now know ye that We, reposing great trust and confidence in your knowledge and ability, have nominated, constituted and appointed, and do by these Presents nominate, constitute and appoint you the said William Humble, Earl of Dudley (Chairman); Sir Antony Patrick MacDonnell; Sir John Charles Ready Colomb; Sir Francis Mowatt; Patrick O'Donnell; John Annan Bryce; Walter Inch Kavanagh; Conor O'Kelly; and Angus Sutherland to be Our Commissioners for the purposes of the said Inquiry.

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject; and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid, and to employ such persons as you may think fit to assist you in conducting any inquiry which you may hold.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time, if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the 20th day of July, 1906, in the sixth year of Our Reign.

By His Majesty's Command,

H. J. GLADSTONE.

Appointment of Secretary.

Dublin Castle,
July 24, 1906.

Walter Ernest Everard Callan, Esquire, B.L., The Castle, Dublin, has been appointed to be Secretary of the Royal Commission appointed to inquire into and report upon the operation of the Acts dealing with Congestion in Ireland.

46–7.	Board's funds sufficient for dealing with only a limited amount of land,	18
48–9.	Statement of Board's financial position,	19
50.	Criticism of Treasury,	20
51.	Board's view,	20
52.	Restrictions placed on Board's purchasing powers,	20
53.	Uncertainty of rate of loss,	20
54.	Cause of present crisis,	21
55.	Effects of restrictions placed on Board's purchasing powers,	21
56.	Representations made by Chairman to Chief Secretary advocating withdrawal of restrictions,	21

VII.—Agricultural Development.

57.	Methods of work,	22
58.	Live stock improvement schemes,	22
59.	Obstacles in the way of effecting permanent improvement,	22
60.	Promotion of poultry breeding and bee-keeping,	23
61.	Forestry work,	23
62.	Potato-spraying; total cost of Board's agricultural work,	23
63.	Government assistance to agriculture prior to 1891,	23
64.	Establishment of Department of Agriculture,	24
65–6.	Dual administration of agriculture and consequent difficulties,	24
67.	Transfer of agricultural work to Department,	25

VIII.—Fisheries.

68.	Progress of Irish fisheries up to the Famine,	25
69.	After the Famine to 1891,	26
70.	Needs of different fishing districts,	26
71–2.	Marine works prior to 1891,	26–7
73.	Marine Works since establishment of Board,	27
74.	Question of maintenance,	27
75.	Board's work north of the Shannon,	27
76.	Fishery development in the South-West,	28
77.	Value of the West coast fisheries,	28
78.	Cost of Work,	28

IX.—Industries.

79.	Task before Board in 1891,	29
80.	Foxford Woollen Mills,	29
81.	Donegal Carpet Factories,	29
82.	Weaving, knitting and sewing industries,	29
83.	Lace classes,	29
84.	Domestic training classes,	30
85.	Little help given to industries for men,	30
86.	Cost of work,	30

X.—Parish Committees.

87.	Constitution and machinery,	30
88–9.	Nature and value of work,	31
90–1.	Criticisms of system,	31–2

XI.—Agricultural Banks.

92.	Importance of co-operative credit associations,	32
93.	Satisfactory nature of results,	32
94.	Cost of Board,	33

XII.—Marine and Inland Works.

95.	Money spent,	33

XIII.—Future Development of Congested Districts.

96.	Policy of Board has been based on sound lines, and in extension and development of their work, especially land re-settlement lies the best hope of the future,	33

XIV.—Question of Continuance of Board.

		Page
97.	Continuance of Board raises question of administrative waste; duplication of machinery for fishery, and industrial development,	34
98.	Dual machinery for land work,	34
99.	Proposed abolition of the Board,	35
100.	Reasons against this course,	35
101.	Recommendation that the Board should be continued and reconstituted,	35

XV.—Future Area of the Board.

102.	Question as to unit of congestion,	36
103.	Advantage of dealing with entire counties,	36
104.	Abolition of present definition; scheduling of all Connaught, Donegal, and Kerry recommended,	36
105.	And, with hesitation, Clare,	37
106.	Also four rural districts in County Cork	37
107.	Statistics of the Board's new area,	38
108.	Treatment of non-scheduled districts,	38

XVI.—Size of Problem of raising Holdings to an Economic Standard.

109.	Main problem is to make holdings economic,	39
110.	What is the size of an economic holding,	39
111.	Maximum number of holdings to be enlarged,	39
112.	Deductions to be made,	40
113.	Land with a rateable valuation of £450,000 required,	42

XVII.—Compulsory Powers required for the Relief of Congestion.

114-5.	The case for compulsion.	43
116-8.	Recommendation that the Board should be given compulsory powers over certain land,	43–4

XVIII.—Amount of Land available for Relief of Congestion.

119.	Meaning of term "grass lands,"	44
120.	Non-residential holdings,	45
121.	Untenanted land,	45
122.	Large residential holdings,	46
123.	Amount available is hardly adequate,	46

XIX.—Comparisons of Claims of Landless Men and of Congests to Grass Lands.

124.	Necessary to meet claims of small farmers in neighbourhood of grass lands,	46
125.	Growth of claims of landless men,	47
126.	These claims cannot be met concurrently with those of the congests,	47
127.	Case for the congests,	47
128.	Case for landless men,	47
129.	Claims of congests superior and should be supported by public opinion,	48
130.	Restriction on power of giving land to sons of tenants recommended,	48
131.	Question of enlarging holdings above £10 standard and of having various types of holdings,	48

XX.—Economic effect of breaking up grass lands.

132.	Importance of question,	49
133.	Present method of raising cattle in Ireland,	49
134.	Argument that the grazier is a necessary link between the small farmer and the fattener,	50
135–6.	Could the small farmers keep their cattle longer than they do at present?	50
137.	Success of change from large grazing ranches to small holdings depends largely on adoption of mixed farming,	51
138–40.	Question whether production of butter, eggs, poultry, and bacon would not pay better than raising store cattle,	51–2
141.	Importance of mixed farming,	52
142.	Necessity of agricultural education and organisation and suitable buildings for farmers,	53
143.	Question of capital,	53
144.	Unsuitability of certain land for tillage,	53
145–8.	Economic arguments in favour of ranching and of small holdings compared,	53–4
149–51.	Summary of conclusions as to redistribution of ranches,	54–5

XXI.—Method of acquiring Land and Question of Price to be paid.

Page

152. The Board should be the purchasing authority as well as the re-settling authority within the new area, ... 55
153–4. Offers for estates at present based on second term rents and net income returns, ... 56
155–6. Valuation, as for as second term rents should be made by the Land Commission, ... 56 & 57
157. Procedure for making offer and, where necessary, applying compulsion, . 57
158. Question of price under compulsion, ... 58
159. Valuation unsatisfactory, ... 58

XXII.—Price to be based on Net Profit Income.

160. Statement of average net profit income basis, ... 58
161. Gross annual income should be taken as one-tenth of actual receipts during last ten years, ... 59
162–3. Adjustment for arrears, ... 59
164. Rent of tenanted land to be scaled down to second term standard, . 60
165. Average agency fees and law costs to be deducted, . . . 60
166. Deduction of poor rate and burdens that cannot be redeemed, . . 60
167. Further deductions to be made to reduce net income to net profit income, . 61
168. Effect of redemption of quit and crown rents, head rents and tithe rent charges, ... 61
169. Rates of redemption, ... 61
170. Pecuniary effect of recommendations as to these charges, . . . 62
171–2. Mortgages should be redeemed by the State, and the annual charge deducted from the income, ... 62 & 63
173–6. Value of Equity of Redemption, ... 63 & 64
177. Court should determine its value, if any, ... 64
178–80. Difficulties in way of dealing with mortgages, . . . 64 & 65
181. Treatment of other charges, ... 65

XXIII.—Objections urged against taking Net Profit Income as a Basis of Price.

182–3. Criticisms as to strict interpretation of net profit income, . . 65 & 66
184. Question of instability of income, especially from grass lands, . . 66
185. Suggestion that fair rents and not grazing rents should be taken as income, 67
186. Suggestion that regard should be had to both grazing rents and fair rents, 67
187. Allowance to be made for the operation of existing economic or natural causes and for the actual condition of the land, . . . 67
188. Further deduction to be made when land not let, ... 68

XXIV.—Other points connected with Price.

189-90. Fixation of price where net income returns not available, . . . 68
191. Compensation for sporting rights, ... 69

XXV.—Rate of Interest to be obtained from Authorised Investments.

192. Securities available for investment, ... 69
193. Dispute as to rate obtainable, ... 69
194. Scheme recommended for determining rate, ... 70
195. Advantages of scheme, ... 70

XXVI. Court to settle Questions arising out of Compulsion.

196. Functions of Court in relation to price, ... 70
197. Recommendations as to Court, ... 71

XXVII. Powers to be exercised over Lands held by Tenant Purchasers and Tenants.

198. Powers over holdings of tenant purchasers and over turf bogs, . . 71
199. Powers over holdings of tenants, ... 72
200–1. Powers possessed by Board, ... 72
202. Existing powers inadequate, ... 73
203. Powers suggested, ... 73
204. Assessment of compensation, ... 74
205. Statement as to proceedure, ... 74

XXVIII. Costs of Sale.

206. Cost of sale should be borne by State, ... 75

XXIX.—Treatment of Uneconomic Holdings already vested in Tenant Purchasers.

Page

207. Number of such cases, ... 75
208. Number to be dealt with, and case of enlargement, . . . 75
209. Difficulties of re-settlement, ... 75

XXX.—Treatment of Pending Cases.

210. Number of such cases, and difficulties they present, . . . 76
211. Cases where the property has not been declared an estate, . . 76
212–3. Suggestions for dealing with property which Estates Commissioners propose to declare an estate, ... 76 & 77
214. Suggested limitation of amount of advances, ... 77
215. Cases where the Estates Commissioners do not propose to declare property an estate, ... 77
216. Case of sales from Landlord to Estates Commissioners, . . . 78

XXXI.—Question of Evicted Tenants.

217. Difficulty about Evicted Tenants, ... 78
218. Recommendation for dealing with such cases, . . . 78

XXXII.—Direct Sales to be allowed only on Certificate of Board.

219. Some estates will not require treatment by the Board, . . . 79
220. Certificate for direct sale might issue in such cases, . . . 79
221. Procedure where part of an estate does not require treatment, . . 79
222. Board should in certain cases obtain undertakings from tenants as to re-sale prices, ... 80
223. Advantages of procedure suggested, ... 80

XXXIII.—The Amount of Land Purchase to be effected by the Board.

224. Difficulties in the way of making an estimate, ... 81
225–6. The land to be bought by the Board and re-settled has a valuation probably of not less than £1,000,000, ... 81
227. Estimate of time required for Board's operations, ... 82

XXXIV.—Provisions against Sub-division and Consolidation of Holdings.

228. Tendency to sub-divide, ... 82
229. Not shown by tenant purchasers, ... 83
230. Question of further restraints, ... 83
231. Prohibition should continue though advance be redeemed, . . 83
232. Restraints on alienation and consolidation, ... 83
233. Price to be paid when Board resumes possession of a holding which they had previously improved and sold, ... 84
234. Sales not frequent, ... 84
235. Defence against involuntary alienation, ... 84

XXXV.—Machinery and Funds for work of Agricultural Development.

236 Agricultural development of immense importance, . . . 84
237. Comparisons drawn between Department and Board, . . . 84
238. Objection to re-transferring agricultural work to Board, . . . 85
239. Necessity for fully utilising facilities afforded by Department, . . 86
240. Desirability of bringing Department into closer touch with Board and poorer districts, ... 86
241–3. Methods of accomplishing this considered, ... 87
244. Annual sum of £23,000 required for agricultural development, . . 87
245. Itinerant *versus* resident instructors, ... 88
246. Question of agricultural training in primary schools, ... 88

XXXVI.—Drainage and Afforestation.

247. Importance of a comprehensive drainage system, ... 88
248. Question of Afforestation, ... 89

XXXVII.—Sporting Rights.

Page

249. Importance of shooting and fishing rights, ... 89

XXXVIII.—Maintenance of Improvements and work of Parish Committees.

250–1. Parish Committees to be regarded as a temporary expedient for effecting improvements, ... 90
252. Maintenance of improvements, ... 91
253. Exemption from taxation in respect of improvements, . . . 91

XXXIX.—Agricultural Co-operation and Re-organisation of credit.

254. Importance of co-operation for small farmers, ... 91
255 Excessive indebtedness of small farmers to shopkeepers, . . 92
256–7. Restrictions suggested on mortgaging and recovery of debts, . . 92
258. Recommendations for re-organisation of rural credit, . . . 93

XL.—Fishery Development

259. Scope for extension of fisheries, ... 93
260. Importance of fishermen following fish all round the coast, . . 93
261. Otherwise the industry insecure, ... 94
262. Effect of increase in number of steam drifters and trawlers, . . 94
263. Kerry and Cork problem ; importance of fishery surveys, . . . 94
264–5. Galway and Mayo problem, ... 95
266. In-shore fishing, ... 95
267. Harbour accommodation and future development, . . . 95
268. Establishment of fishing villages, ... 96

XLI.—Industrial Development and Technical Instruction.

269. Prospects for large industrial developments in the west are unfavourable, 96
270. How far the State can give assistance, ... 96
271 Conclusions as to help to be given by Board, ... 97
272. Large industries suitable for development, ... 97
273. Importance of inquiries and surveys, ... 98
274–5 Cottage industries and their limitations, ... 98
276–7. Question of stability of these industries, ... 99
278. Work of Technical Instruction, ... 99
279. Drawing and experimental science, ... 99
280. Technical Instruction, ... 99
281. Industrial instruction, ... 99
282. Difference between assistance given by the Department and by the Board, 100
283. Recommendations for the prevention of overlapping, . . . 100
284. Educational deficiencies of congested districts, ... 100

XLII.—Constitution of Board.

285. There should be four *ex-officio* members, ... 101
286. Should nominated members be replaced by elected members, . . 101
287. Reasons for recommending that there should be nine elected members, . 101
288. Objections urged against elected members, ... 102
289. Importance of duty of selection entrusted to county councils, . . 102
290. There should also be four nominated members and three paid members, . 102
291. Term of office, ... 102
292. Difficulty of reducing number of Board below twenty, . . . 102
293. Board should be made a corporate body, ... 102
294. Board should hold local inquiries, ... 103

XLIII.—Money necessary for carrying out the recommendations made.

295. Estimate of annual cost, ... 103
296–7. Cost of administration and question of staff, . . . 103 & 104
298. Borrowing powers or floating capital required, ... 104
299. Cost of agricultural development, ... 104
300. Cost of fishery and industrial development, parish committees, steamer services, piers and roads, ... 104
301. Loss on re-sale of estates, ... 104
302. Loss on each class of estates, ... 105
303. Proportions in which each class should be bought, . . . 105
304–5. Amount of untenanted land to be bought, ... 105
306. Estimate of future loss, ... 105
307. Question of increase in rate of loss on untenanted land, . . . 106
308. Summary of conclusions as to loss on estates, ... 106
309. Recommendations as to provision of necessary funds, . . . 106
310. Question of bonus, ... 107

XLIV.—Relief of Congestion outside Board's Area.

ROYAL COMMISSION ON CONGESTION IN IRELAND.

FINAL REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

We, the Commission appointed by your Majesty's Royal Warrant of 20th July, 1906,

> "To inquire into and report upon the operations of the Acts dealing "with congestion in Ireland; the working of the Congested Districts "Board, and the Land Commission under these Acts, and the rela- "tions of the Board with the Land Commission and the Department "of Agriculture and Technical Instruction; what areas (if any) out- "side the districts now scheduled as congested require to be dealt "with as congested; what lands are most conveniently situated for "the relief of congestion; what changes in law or administration are "needed for dealing with the problem of congestion as a whole, for "facilitating the migration of the surplus population from congested "areas to other lands, and generally for bettering the condition of "the people inhabiting congested areas,"

now have the honour to submit the following Report:—

I.—STATEMENT OF PROCEEDINGS.

1. We held our first meeting in London on July 25th, 1906, for the purpose of making preliminary arrangements for the carrying out of the Inquiry, and we came to the conclusion that our work could be conveniently divided into two divisions:—first, taking evidence in London and Dublin from certain official witnesses as to the working of the Congested Districts Board, the Land Commission and the Department of Agriculture and Technical Instruction, and their relations with one another, and also from certain persons nominated to express the views of representative associations, and, secondly, taking evidence in each of the counties containing congested districts, and in certain other places from local witnesses for the purpose of obtaining information as to the conditions prevailing in the poorer parts of Ireland, as to the working of the ameliorative measures that had been introduced, and as to the wants of the different districts. We also came to the conclusion that it would be necessary for us to inspect the congested districts and other poor areas with special reference to estates that had been re-settled by the Board, the grass areas which it had been stated might be utilised for the relief of congestion, and to the condition of the various fishing centres.

2. Our first public session was held in Dublin during the period September 7th-15th, when evidence was taken from witnesses representing the Congested Districts Board. It was then decided to hold some country sittings while the days were still comparatively long, and the weather comparatively fine; and, accordingly, after taking further evidence in Dublin from October 3rd-5th from witnesses nominated by the Congested Districts Board, we proceeded to Donegal, where we took local evidence at four different centres and made inspections from October 7th-19th. We next held three sessions in London in November, 1906, February and March, 1907, for the purpose of taking further evidence from the Congested Districts Board, the Irish Land Commission, the Department of Agriculture and Technical Instruction, and from certain official and unofficial witnesses. In April we resumed our country sittings, being in Co. Sligo and Co. Leitrim from April 16th-28th. We then visited the counties which do not contain scheduled districts,

I.—*Continued.* Statement of Proceedings.

but from which requests had been received that the Commission should inquire into their circumstances. Accordingly, we were in Co. Down, Co. Antrim, Co. Tyrone, Co. Cavan, Queen's County, and Co. Clare from May 15th to June 8th, and we sat in Dublin on the 10th and 11th June. From July 2nd to July 16th we were in Kerry and Cork, from August 20th to September 4th in Co. Mayo, and from September the 17th to October 4th in Galway and Roscommon, and we held a special meeting in London on 22nd-24th January, 1908, for the purpose of re-examining the Secretary and the Chief Land Inspector of the Board. In all we held 116 public sittings, and in addition to this we spent 48 days travelling and inspecting in the counties mentioned above. In order to facilitate our local inquiries the Treasury engaged four motor cars, without which it would have been difficult to accomplish our work. A sketch map of Ireland, showing the country centres at which the Commission sat, and the districts we inspected, is contained in this Report.*

3. We decided at our first meeting to examine any witnesses that the Congested Districts Board, the Irish Land Commission and the Department of Agriculture and Technical Instruction, the three bodies mentioned in the terms of reference, chose to put forward, and accordingly the following were examined:—Mr. W. L. Micks, Mr. F. W. D. Mitchell, Mr. H. Doran, Mr. J. R. O'Brien, the Rev. D. O'Hara, the Rev. W. S. Green, Mr. J. O'Connor, Mr. G. W. Russell, Mr. T. S. Porter, the late Mr. A. T. Duthie, Mr. W. J. D. Walker (*on behalf of the Congested Districts Board*); the Right Hon. F. S. Wrench, Mr. M. Finucane, Mr. W. F. Bailey, Mr. C. H. Crookshank, Mr. W. H. Stuart, Mr. J. L. Pigot (*on behalf of the Irish Land Commission*); the Right Hon. Sir Horace Plunkett, Mr. T. W. Russell, Professor J. R. Campbell, and Mr. G. Fletcher (*on behalf of the Department of Agriculture and Technical Instruction*). We invited the Irish Landowners' Convention and the United Irish League to nominate two witnesses to give evidence before the Commission on the general aspect of the questions raised by our terms of reference, and one or two witnesses to give evidence at each of our country sittings on local questions. Mr. W. H. Boyd and The O'Conor Don gave evidence on behalf of the Irish Landowners' Convention, and Mr. Fitzgibbon on behalf of the United Irish League; and numerous other witnesses appeared at the different country sittings on behalf of both bodies. Amongst other witnesses examined in London and Dublin, were the Right Hon. A. J. Balfour, the Right Hon. G. Balfour, and the Right Hon. G. Wyndham, as ex-Chief Secretaries and past Chairmen of the Board; Mr. Arthur M'Clintock (Public Trustee); Mr. L. A. Waldron (a member of the Dublin Stock Exchange); Mr. J. A. Mullens (Stockbroker to the Bank of England); Lord Castletown (representing the Irish Forestry Society); Mr. W. D. Talbot Crosbie and Mr. A. J. Crichton (representing the Irish Reform Association); Sir John Barton (Commissioner of Valuation); Mr. R. A. Anderson (Secretary of the Irish Agricultural Organisation Society); and Mr. R. R. M'Gregor (Secretary of the Congested Districts Board for Scotland). At our country sittings we heard witnesses nominated by the County Councils, the Rural District Councils, the Roman Catholic and Church of Ireland Bishops of the Dioceses in which we sat, the Moderator of the General Assembly of the Presbyterian Church, the County Committees of Agriculture and Technical Instruction, as well as those nominated by the Irish Landowners' Convention and the United Irish League, and numerous voluntary witnesses. We especially invited the attendance of occupiers of holdings under £10 valuation at all our country sittings; and in County Roscommon we heard witnesses nominated by the Grazing Farmers' Association. In all we examined 560 witnesses, some of whom gave evidence more than once. Of the witnesses about half were farmers (including graziers and cattle dealers), 99 were clergymen, 40 shopkeepers, 27 land agents, 23 landlords, 22 were engaged in the fishing trade, and the remainder followed various other occupations.

4. We met in London on the 26th November, 1907, for the consideration of our Report, and sat in all on thirty-three days between that date and the date when this Report was finally agreed upon. As the evidence taken was very voluminous, it was thought desirable to publish it from time to time instead of waiting for the publication of our Final Report. Accordingly

* See map facing p. 116.

eleven volumes of evidence were published as appendices to eleven preliminary Reports. The evidence contained in these volumes comprises 60,386 questions and answers, and occupies 2,314 pages. In addition to the evidence, these volumes contain 1,779 pages of statistics, notes, memoranda, and summaries or digests of the evidence contained in each volume. A volume of 409 pages, containing special statistics, relating to agricultural holdings, collected for the Commission, was published as a second Appendix to the Seventh Report. As Appendices to this Final Report, two volumes are issued, one containing a digest of, and the other an index to, all the evidence taken.* I.—*Continued.* Statement of Proceedings.

II.—Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

5. Before considering the problem of congestion as it presented itself to us, it may be well to explain what are the scheduled districts, what appears to us to be their present condition, and what are the main causes of their poverty. When the Government of the day decided in 1891 to create the Congested Districts Board to deal with the problem of the poorer parts of Ireland, the first question that confronted them was the delimitation of the area over which the Board should work. After considering various tests, it was decided that the electoral division (of which there are 3,652 in Ireland) should be the unit of congestion, and that no division should be placed under the Board if the average rateable valuation per head exceeded 30*s.*, unless it was specially scheduled by the Lord Lieutenant. It was obvious that a few electoral divisions in nearly every county in Ireland would satisfy this test, and that it would be desirable to concentrate the energies of the Board upon the counties where there was a large amount of exceptional poverty. It was, therefore, decided that no electoral division in any county should be scheduled unless one-fifth of the total population of the county (or in the case of the County Cork, of either riding thereof) lived in electoral divisions where the average valuation per head did not exceed 30*s.* The Lord Lieutenant had power for one year, under the provisions of the Act, specially to schedule any electoral division with a valuation above 30*s.*, or to exclude any electoral division that came within the terms of the definition, but which it was thought inexpedient to schedule. 54 and 55 Vic., c. 48, sect. 36.

6. It was found that 398 electoral divisions situate in the counties of Galway, Leitrim, Mayo, Roscommon, Sligo, Donegal, Kerry and the West Riding of Cork, satisfied both provisions of the definition. The Lord Lieutenant specially scheduled 31 other electoral divisions, in the above counties, in which the average valuation per head was over 30*s.* As no electoral division, in these eight counties, with an average valuation not exceeding 30*s.* was excluded, 429 electoral divisions situate in the eight counties mentioned were declared congested. The scheduled portion of each of these counties is technically known as a "Congested Districts County." Under the Local Government Act of 1898 the boundaries of County Galway were altered, and the electoral division of Mountshannon (which had been originally scheduled through a clerical error) was transferred from County Galway to County Clare.

7. It is obvious that neither the definition adopted, nor any other arbitrary test, could be wholly satisfactory. In the first place a certain number of poor electoral divisions, in the other counties of Ireland, with an average valuation per head of 30*s.* or less were excluded from the Board's operations. The fact that one-fifth of the population did not live in electoral divisions of which the average valuation per head was 30*s.* or under, showed that the exceptional poverty in these counties was not so widespread as in the eight scheduled counties. This exclusion was intentional in order to enable the Board to concentrate their efforts. The definition did not, however, cover all poor divisions in the eight counties as the presence of certain areas, such as large grazing farms, in an otherwise poor electoral division, while in no way relieving the poverty of the poorer part of the electoral division, brought up the average valuation, per head above the 30*s.* limit, and so debarred the division from being brought under the Board, unless the Lord Lieutenant specially scheduled it. This power was restricted to

* For a complete list of the publications of the Commission, see p. v.

II.—*Continued.*
Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

one year from the passing of the Act, and it might have been useful if it had been continuous. Again, valuation per head, though probably the best test available of the resources of a district, is not perfect, since, apart from the question of areas which, without affording employment, swell the average valuation, it is a complete guide to the wealth or poverty of any particular district only :—(1.) When the people are entirely dependent on the land for their living; that is where there are no supplementary industries such as fishing, weaving, &c., and (2.) Where the valuation corresponds to the present productivity of the land. There are electoral divisions in Ireland with an average valuation per head under £1 where the people are in easier circumstances, on account of fishing and other resources, than they are in electoral divisions with an average valuation of over 30*s.* where there are no subsidiary industries. Again, the valuation was made between 45 and 55 years ago, and it was stated in evidence that the valuation was not even then uniform throughout Ireland, and no alteration has been made in it in order to allow for any improvement or deterioration in the land that may since have taken place. We shall recur to this subject later when considering the question of what areas outside the districts now scheduled as congested require to be dealt with as congested ; it will suffice to remark here that, while the scheduled areas contain most of the exceptionally poor districts, there are other districts, some of them adjoining the scheduled areas, just as much in need of assistance, with which the Board under the present law cannot deal.

Barton, V., Q. 22513, *et seq.* Bailey, III., p. 338–9.

See paragraphs 102 and 303–5.

8. The districts scheduled under the Act of 1891 consist of 3,626,381 acres, or rather more than one-sixth of the total area of Ireland, with a population (in 1901) of 505,723, which is rather more than one-ninth of the total population of Ireland, and with a poor law valuation (in 1901) of £577,043, which is about one twenty-seventh of the total valuation of Ireland. It will be at once seen that the population in the scheduled districts is by no means dense, and that these areas, as a whole, are not congested in the ordinary sense of the word. The term as applied to them means little more than exceptionally poor. The average valuation in the congested districts of each acre of land occupied by agricultural holdings is 3*s.* 6*d.*, whilst the corresponding average for the rest of Ireland is 12*s.* 1*d.* Hence the trouble is not the scarcity of land, but the scarcity of any but the poorest land. So far as we have been able to ascertain, the term "congested" as applied to the very poor districts of the West of Ireland was first used in 1882 in the First Report of the Committee of Mr. Tuke's Fund. No doubt the fact that emigration—a remedy usually reserved for congestion properly so called—was then the panacea for the distress existing in the West of Ireland led to these poor areas being rather inappropriately described as congested districts. The term was, and is, a misnomer, but it is consecrated by the usage of twenty-five years, and accordingly our adherence to it, after this explanation, is not likely to be misunderstood.

9. Ireland, of course, is predominantly an agricultural country, but the predominance is most marked in the congested districts. In the non-scheduled part of Ireland 2,200,000 people (four-sevenths of the population) live on what is described in the Census returns as agricultural holdings, the total number of which is 405,347 with a valuation of £9,500,000. In the scheduled areas 461,247 people, or more than nine-tenths of the population, live upon agricultural holdings. The total number of holdings in these districts is 84,954, with a valuation of £523,188, which gives an average valuation of a little over £6 per holding, as compared with an average of between £22 and £23 per holding in other parts of Ireland. These figures at once suggest the question, how many holdings in the congested districts can be considered capable of supporting a man and his family according to any decent standard of comfort ? The matter will be considered in detail later, but it is sufficient to remark here that, whilst it is uniformly admitted that there must be variation, a holding of which the valuation is £10 has been generally regarded by witnesses as the minimum desirable. Not only is the average valuation in the congested districts below this, but of the total number of holdings (84,954), 74,413, or about seven-eighths, are under £10 valuation, and of these 45,138 (or more than one-half the total number of holdings in the congested districts) are under £4 valuation. We shall refer to these figures when considering the size of the land problem to be solved, but it may now be pointed out

See paragraphs 109–12.

that, whilst nine-tenths of the population in the congested districts live upon agricultural holdings, over three-quarters are living on holdings that are not in themselves adequate to support them according to a proper standard of living. They have consequently either to supplement the produce of their holdings from other sources, or to live below the proper standard of comfort; in point of fact, the great majority do both.

II.—*Continued.* Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

10. Not only are most of the holdings in the scheduled districts quite inadequate in size, at any rate in regard to the cultivable land, but many of them are also arranged in a way that makes good agriculture impossible. On many estates in the West, especially where the houses are clustered together in "villages," and where the people have been in occupation for generations, the land is held in rundale—a survival, according to some authorities, of the old communal or tribal system of land-holding—and in other parts the people have sub-divided the holdings from time to time in their own way, in consequence of which their holdings now consist of intermixed plots. The result is that the farm of one tenant often consists not of one or two or even three separate portions of land, but of many detached plots within fenced fields, scattered amongst similar fragments of other holdings. A field of one acre may belong to a dozen persons, each of whom has a plot of his own while the land is under cultivation, and very frequently matters are still further complicated by various fractions of plots being held in "undivided shares." As might be expected, under such conditions, agriculture is extremely backward in many places. Most of the holdings consist mainly of rough grazing land, and potatoes and oats are the only crops usually grown. The methods of cultivation are primitive, with but little rotation of crops, insufficient drainage and inadequate manuring. The breeds of live stock were worn out and of little value in the poorest districts when the Board commenced operations, and, though there has been considerable improvement, much remains to be done, and progress in this respect is of great importance, as the calf or yearling that the average small occupier at present sells is often his main source of income.

11. In very many districts the people cannot live on the produce of the land, but have to depend very largely upon secondary sources of income of an uncertain and varying nature. They pay rent for a holding not so much for its agricultural value as because it furnishes a home for their family. In some inland districts the small farmer is forced to eke out a living mainly by means of money earned by field labour, mostly in Great Britain, because, owing to the enormous predominance of small holdings, and to the fact that most large holdings in the neighbourhood are grazing ranches, there is little demand for agricultural labour at home. The majority of these Irish migratory labourers come from the congested districts, and it has been estimated that the average earnings they bring home after an absence of five or six months varies from £12 to £15. Along the sea-board the results of sea fishing are sometimes more valuable than the produce of the land, especially where the fisheries have been developed by the Board. The kelp industry though decreasing in value is still of considerable importance, and residents along the coast have the advantage of being able to obtain sea-weed and sea-sand for manure. On the other hand they are frequently not so well off for turf and rough grazing as those who live inland, though on some parts of the coast a considerable sum is made by the sale and export of turf. The woollen industry gives employment in certain parts of the congested districts, and some addition to the family income is derived from weaving, knitting, sewing, lace-making, and other home industries established or developed by the Board, while many "congests" (as the inhabitants of these districts are often called) are largely dependent on remittances from their relatives in America.

II., p. 315.

12. Although these secondary sources of income are of help to many who could not live on the produce of their holdings, still in a "good year" some of them are little more than free from the dread of hunger, whilst a bad year, arising from complete or partial failure of the produce of their holdings, results in a condition of semi-starvation. In the first report of the Board, certain typical family budgets were published, which

Cd. 6908, 1903, pp. 32–7.

II.—*Continued.* Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

showed that in some cases the value of the produce of the farm, together with the earnings and receipts of the family from other sources, did not exceed a total of £15 a year, whilst in other cases the annual resources of an ordinary family were worth nearly as much as £80. Even in the more prosperous districts the standard of living is low. In the poorer districts the food consists largely of potatoes from harvest time until the spring, and of flour and Indian meal during the "hungry" months, supplemented by bread and tea. Oatmeal seems to be little used; milk is scarce, and the diet is entirely vegetable, with the exception of salt fish at times, which is generally used more as a relish than as an ordinary article of food, or a little fat bacon used as "kitchen." Some beer and whiskey, and a comparatively large amount of tobacco are used, whilst in many districts the consumption of tea seems excessive. Most of these articles may, however, be regarded as stimulants for a badly fed population rather than as ordinary luxuries. Lord Balfour of Burleigh and Lord Blair Balfour, in their joint recommendations, in the Report of the Royal Commission on Local Taxation, thus described the condition of the people :—

Cd. 1068–1902, p. 23.

> "In the congested districts there are two classes mainly, the poor and the destitute. There are hardly any resident gentry, there are a very few traders and officials, but nearly all the inhabitants are either poor or on the verge of poverty. . . . In these districts, which are the very poorest in Ireland, the taxation is by far the highest; but the local resources are so low that even with a high rate of taxation the indispensable needs of the locality cannot be properly met. . . . The workhouses and infirmaries in most of the congested districts, owing to the poverty of the people, are necessarily in a worse condition than the infirmaries and poor law institutions elsewhere in Ireland. . . . Very little is spent on out-door relief. . . . . Moreover, there are very few indoor paupers. The people are very helpful to one another. The poor mainly support the destitute."

XI., pp. 98–9.

13. Nevertheless the death rate is low—a testimony to the virility of the race. The nine Irish counties with the lowest average annual death rate for the period 1891 to 1901 are as follows:—Mayo, 13·9 per 1,000 inhabitants; Roscommon, 14·2; Kerry, 14·2; Leitrim, 14·3; Sligo, 14·6; Donegal, 15·0; Cavan, 15·1; Galway, 15·2; Clare, 15·5. Of these Cavan is the only county, some part of which is not scheduled as congested. The average of the eight counties which contain scheduled districts, excluding Cork,* is 14·6, whilst that of the rest of Ireland is 19·4. This difference is even more striking than would appear at first sight, for, owing to the poverty of these districts, the emigration of the able-bodied is greater than elsewhere, and consequently there is an undue proportion of the very young and the very old in these counties. In six out of the eight counties containing congested districts (omitting Cork), less than half the population is between 20 and 65 years of age, whilst in every other county in Ireland the number between these ages is over half the total population. In the eight counties 51·1 per cent. of the population are under 20 years or over 65, whilst in the rest of Ireland only 46·2 per cent. of the population are within these limits. Consequently, other things being equal, a higher death rate might have been expected in these eight counties than elsewhere, since they contain an excessive proportion of the classes amongst whom the average mortality is highest, the young and the old, and the comparative lowness of the death rate is therefore even greater than appears at first sight.

14. As might have been expected from the undue proportion of young and old in these counties, and from their poverty, the marriage rate is also low. The average for the eight counties is 3·6 per thousand inhabitants as compared with 5·2 in the rest of Ireland. Similarly the birth rate is lower in the West than elsewhere, the average being 21·6 per thousand inhabitants in the eight counties as against 23·4 for the rest of Ireland. The latter figure, however, is swollen by the high birth rate in Belfast and Dublin (33·0 and 31·9 respectively), and if these two large urban centres were excluded, the average birth rate in the eight counties is higher than in

* In many of the comparisons which are made in this report between the counties containing congested districts and the rest of Ireland, Cork is included in the latter rather than in the former class, because though there is a limited area of acute poverty in the south west corner of the West Riding, Cork is such a large county, and on the whole so comparatively rich, that its inclusion in the former class would produce misleading results.

II.—*Continued.*
Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

the rest of Ireland, which is somewhat remarkable in view of the smaller adult population, the lower marriage rate, and the fact that much fewer illegitimate births occur in these counties than in any other part of Ireland. The result of the very low death rate and the comparatively high birth rate is that in the excess of births over deaths the eight counties are considerably in advance of the rest of Ireland. The excess in Belfast is 10·0 per thousand inhabitants; in Kerry, 9·4; Mayo, 8·7; Galway, 7·0; Antrim, 6·3; Leitrim, 6·1; Donegal, 6·1; Sligo, 5·7; Roscommon, 5·3; and Clare, 5·2; thus eight of the ten highest places, are furnished by the counties part of which is congested, and the average for the whole of these counties is 7·0, as compared with 4·0 for the rest of Ireland. These counties are, however, the places whence emigration is greatest, the average annual rate for the period 1891-1901 being 16·2, or more than double the rate for the rest of Ireland, namely, 7·1. Hence in some of these counties the decrease in population during the period 1891–1901 has been very marked. The average decrease in population in the eight counties was 9·2 per cent., or more than double that of the rest of Ireland (4·0 per cent.), despite the fact that the natural increase by excess of births over deaths was far higher.

15. The outstanding feature of the congested districts, and, indeed, of the greater part of the nine counties which contain such districts is not an excessive population, but, first, a fairly dense population in certain areas, mostly along the sea coast, where the land is hardly capable of supporting any population at all, and, secondly, excessive population in districts mainly consisting of poor land but adjacent to extremely thinly populated districts of better land. The population of the scheduled districts, depending as it does mainly upon agriculture, is excessive for the land having regard to its value, and no redistribution of the population within the scheduled areas could, to any considerable extent, remedy the existing congestion. The richer portions and the less thinly populated portions of the counties containing congested districts are excluded from the schedule, by reason of the land being good and the valuation, therefore, comparatively high, or by reason of the population being small, which brings the average valuation per head above the 30*s.* limit. There are in the non-scheduled areas very many uneconomic holdings, but there also are a large number of very large holdings. If no distinction is drawn between the scheduled and the non-scheduled areas, the total population living on the land in the whole of the counties, part of which are scheduled as congested, would not be very excessive if the people were more evenly distributed. To accomplish this would go far to solve the immediate problem of congestion.

16. Before considering the measures which have been, and should be, taken to improve the condition of these districts it may be desirable to consider very briefly how the present state of affairs arose. Two questions naturally present themselves corresponding to the two types of congested districts mentioned above. First, how did districts so little capable of supporting any population at all come to be populated very thickly, not indeed for the acreage, but having regard to the productive capacity of the land; and, secondly, how is it that in large districts where the land is mostly good, there are very few people on the good land, but great numbers on the bad land adjoining? It may be that some settlers were attracted from the interior to the first class of congested districts which are mainly on the seaboard, partly by the success of the west coast fisheries during the Elizabethan age (though these were mainly carried on by foreigners), and to the comparative immunity these districts afforded from the ever-threatening danger of devastation, consequent upon the frequent wars waged during the Tudor period in inland districts. There can be little doubt that the introduction of the potato enabled the descendants of some of these settlers to continue to eke out an existence in these districts in increased numbers, when otherwise they would have been forced to seek a living on kindlier soil.

17. The main answer to both inquiries is, however, to be found in the course of Irish history during the last three hundred years, though of course economic causes have also contributed to congestion, especially during the nineteenth century. The various Plantations of Ireland, the Acts of Settle-

II.—*Continued.* Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

ment and Confiscation and the substitution of English land tenures for the traditional Irish methods of land-holding have profoundly affected the agrarian development of Ireland. The chief incident in history, however, which led to congestion in the West was the Cromwellian Act of Settlement, under which most of the landowning population implicated on the Royalist side in the war of 1641 were banished west of the Shannon. Irish land bonds had been issued in England in 1642 to the "Adventurers," who had advanced money for the equipment of an army to deal with the rising in Ireland —an army, by the way, which never left England, but remained to fight at Edgehill—and to meet these claims, and also to discharge the arrears of pay due to Cromwell's army, the most thorough measure of confiscation known in Irish history was enacted. The swordsmen had passed into foreign armies, and many others had been transhipped to the West Indies, but a large portion of the native population in Ulster, Leinster, and Munster, were banished to Connaught in 1653 and 1654.* Only two classes of persons were exempted from the transplantation, those who could prove "constant good affection," and the mere earth-tillers, viz., "All husbandmen, plowmen, labourers, artificers, and others of an inferior sort." The weaker portion of the population already resident in Connaught, and of those now transplanted there, were pushed further west to the poorer land, whilst the stronger portion remained or settled more inland. The restoration of the Monarchy brought little relief to most of the native Irish, and after the Battle of the Boyne the Williamite Acts of Settlement intensified the effects of the Cromwellian and earlier plantations.

18. The commercial restrictions from which Ireland suffered during the following century forced the people to look for subsistence to the land, and the agrarian unrest was not relieved by legislation but rather intensified by the operation of the Penal Laws which prevented the greater part of the population from acquiring any beneficial interest in the land. Moreover the wave of industrial prosperity, which spread over Ireland towards the end of the eighteenth century, hardly made its way to Connaught, and not at all to the more westerly part, except so far as the fisheries were concerned. The high prices obtained for agricultural produce during the Napoleonic Wars tended to extend the area under cultivation, and increased the number of cottiers and other agricultural labourers. Congestion did not cease when prices fell, but, increased by sub-division, went on until the great crash of the Famine came, when the upheaval of society that ensued was attended with a great decrease in the number of holdings. In some cases the tenants, especially those who were really labourers with allotments, gave up their holdings, as those who had survived the famine found less demand than ever for their labour. In many cases the landlords were forced to effect clearances, either by their creditors or because they were confronted with the difficulty of obtaining rents from pauper tenants. In certain districts the greater part of the population died, and whatever may be the most potent causes of the consolidation of holdings that was effected about the time of the Famine, there can be no doubt about its extent.

19. Between 1847—the first year in which there is a return of holdings under one acre—and 1851 the number of such holdings in the Counties of Donegal, Galway, Leitrim, Mayo, Roscommon, Sligo, Kerry and Clare fell from 18,639 to 8,354. Between 1841 and 1851 the number of holdings between 1 and 15 acres in the same counties fell from 216,798 to 91,894, while in the same period the number of holdings between 15 and 30 acres rose from 15,619 to 46,942, and of those over 30 acres from 9,198 to 44,638. Between 1851 and 1881 the number of holdings between 1 and 15 acres fell 11 per cent., while the larger holdings increased. In the case of those between 15 acres and 30 acres, the increase was seven per cent.; between 30 acres and 100 acres, six per cent.; and of those over 100 acres, eight per cent. Hence, while part of the land formerly occupied by small holdings was utilised for the creation of large grazing farms, some of it was employed for the enlargement of other small holdings. Many of the small farms swept away were uneconomic, but the

* The number has been estimated by some, *e.g.*, D'Arcy M'Gee, at about 100,000, or about one-eighth of the total population of Ireland.

sudden nature of the changes undoubtedly caused great suffering and, in many cases, left bitter memories. This tendency to consolidate farms was given an impetus by the passing of the Encumbered Estates Act in 1848, which replaced many of the old landlords by new men, a large number of whom, looking upon the owning of land as purely a commercial transaction and disregarding traditional rights of the tenants, raised rents or evicted tenants and consolidated the holdings thus vacated. Another cause that contributed to the process was the repeal of the Corn Laws, which exposed Irish cereals to outside competition with the world—though the full effects of this were not felt for many years. The rise in the price of beef—which was unaffected by competition—led to more land being cleared and thrown into large grazing farms. On the poorer land, however, many of the inhabitants were left undisturbed because it was not thought worth while to resume possession of the holdings. Many of those who were cleared from the good land and did not go to America settled upon unreclaimed pieces of land in the neighbourhood and added to the congestion already existing there. It is probable that others went further west, and took the place of those on the seaboard who had died during the Famine or had been forced to emigrate, and some carved out new holdings for themselves on the waste land along the western littoral, and started the almost impossible task of winning a living from land incapable in itself of supporting life according to any decent standard. There can be no doubt that sub-division went on even after the Famine on these small holdings, especially on the seaboard where the utmost utility of the holding was to supply a home and produce potatoes.

II.—*Continued.*
Definition of Congestion, Condition of Congested Districts, and Causes of Congestion.

20. The insufficiency of the resources of these poor districts—most of which are now known as congested—to support their population, despite the reduction by death during the Famine period and the subsequent emigration, is shown by the numerous relief measures which have had to be introduced since 1879, of which an account specially prepared for the Commission will be found in the Appendix to our Eleventh Report. In a quarter of a century four millions were spent on measures of relief, taking the expression in its wider meaning, namely, the amelioration of chronic poverty. Over three millions were spent in the same period on the construction of light railways and on other improvements in the means of communication, and by far the greatest portion of this money has been spent in the scheduled districts. Even yet, bad harvests render further relief measures inevitable every second or third year in certain districts, and although distress is not now as acute and widespread as it was twenty years ago, this seems to be more due to the decline in population and the change of diet to food other than the potato, than to permanent amelioration in the conditions of life.

XI., pp. 91-7.

III.—Establishment of Congested Districts Board.

21. There has, however, been considerable permanent improvement in these districts, largely owing to the work of the Congested Districts Board, which was established in 1891. Mr. Arthur Balfour, the founder of the Board, decided to entrust to a small body of Irishmen, selected irrespective of party considerations, the task of making an experiment as to what could be done to relieve the poorest parts of Ireland, and with this object the Board, though endowed with only small funds, were given the widest powers over the area scheduled in the manner already described. They were empowered to take such steps as they thought proper for :—

54 & 55 Vic., c. 48, ss. 34-41.

(1.) Aiding migration or emigration from the congested districts, and settling the migrant or emigrant in his new home.

(2.) Aiding and developing agriculture, forestry, the breeding of live stock and poultry, weaving, spinning, fishing (including the construction of piers and harbours, and supplying fishing boats and gear, and industries subservient to and connected with fishing), and any other suitable industries.

III.—*Continued.* Establishment of Congested Districts Board.

22. The Board's income consisted in the first instance of £41,250, being the interest at $2\frac{3}{4}$ per cent. on the Church Surplus Grant—one and a half millions charged—on the Irish Church Temporalities Fund. Two capital funds were transferred to the Board from the Commissioners of Public Works:—the Irish Reproductive Loan Fund, which amounted in securities, cash and outstanding loans, to £70,394, and a portion of the Sea and Coast Fisheries Fund amounting to £18,866. The Board have since received two additions to its annual income; a Parliamentary grant of £25,000 in the year 1899, and, in 1903, a subsidy of £20,000 out of the Ireland Development Grant. The actual addition made by the former grant was less than the nominal amount, as the Board were henceforth obliged to defray out of their funds, salaries and travelling expenses, amounting to about £6,000, formerly borne on the Parliamentary Vote, also the cost of office maintenance, repairs, and coal (hitherto borne by the Board of Works), printing and stationery (hitherto borne by the Stationery Office), and postage and telegrams (hitherto borne by the General Post Office). The result was that the net increase of income to the Board was only about £17,000. The original staff was largely recruited from the Irish Land Commission and the salaries of its permanent officials appeared till 1899 in the Land Commission Vote. The Treasury have refused to allow any additions to be made to the permanent staff, and consequently over 75 per cent. of the clerical staff consist of temporary clerks. All the salaries have now to be paid out of the Board's endowment. An expenditure of £50,000 on various public works, chiefly piers and roads, has been met from the capital funds of the Board. A sum of about £23,000 was made in dealings with Guaranteed Land Stock, and the receipts on certain estates, during the time they were held by the Board, have exceeded the outgoings. Apart from these incidental aids, all the Board's expenditure that has not been recovered in the shape of repayments, has been provided out of money borrowed from the Board of Works or has been met out of its annual income, which has varied from £41,250 to £86,250.

IV.—Work of Land Purchase and Re-settlement prior to 1903.

23. The work which is now regarded as far the most important function of the Board—the purchase and re-settlement of estates—does not seem to have been clearly contemplated in the Act which constituted the Board, though that Act did attempt to provide for the amalgamation and enlargement of holdings on an estate still in the hands of a landlord. Experience, however, soon proved that it is practically impossible for the Board to do this work without buying the estate, and that it is extremely difficult to re-settle a cluster of uneconomic holdings which have been bought by the occupiers under the Land Purchase Acts. Though the general powers given to the Board for the relief of congestion by the Act of 1891 were very wide, and though the Act indicated the amalgamation and enlargement of holdings as one of the objects to which attention might be directed, the purchase of estates for this purpose, as has been noted, was not specified. Hence, when the Board in 1893 proposed to buy a property that badly required re-settlement, the French Estate, there was at first some doubt expressed whether the Act authorised the purchase by the Board of properties merely for the purpose of enlarging small holdings. Finally the Land Commission agreed to buy the estate for the Board, but as an advance under the Land Purchase Acts could not be obtained for this purpose, the money had to be provided out of their own funds. Even then, as the Board had no power to hold land—though property could be held in trust for them by the Land Commission—it was considered doubtful whether the tenants on the French Estate could obtain advances under the Land Purchase Acts, in order to buy their holdings from the Board, since that body was not technically a "landlord."

56 & 57 Vic. c. 35.

24. To remove some of these difficulties an Act was passed in 1893 giving the Board power to acquire land for the enlargement of holdings and to have such land held by two of their members as trustees. When the Board resold to the tenants a further legal difficulty arose, as the Land Commission proposed to exercise their rights of retaining part of the price as a guarantee

IV.—*Continued.*

Work of Land Purchase and Re-settlement prior to 1903.

deposit on the grounds of insufficient security. The result was the passing of a second amending Act in 1894 which enabled the Board to guarantee the repayment of advances instead of having part of the price retained as a guarantee deposit. Though the system of guarantee deposits has been done away with, a guarantee is still given by the Board in a somewhat modified form under the Act of 1903, the reason being that the Land Commission do not inspect, for security, holdings sold by the Board, as they do in the case of sales outside the zones by other vendors. In addition to the tenanted land on the French Estate which was held by 77 tenants, two-thirds of whose holdings were valued at under £5, there was a comparatively large grazing farm which enabled the Board to give the poorer tenants enlargements, though it was not sufficient to enable them to carry out an entirely adequate re-settlement. Some of the holdings were re-arranged, and the rest obtained stripes of turf and cut-away bog. Several new houses were built, others were repaired, and over £700 was expended on making roads, drains and fences, &c. The estate had been purchased in the Land Judge's Court for £7,600, and the Board were able to recover on re-selling to the tenants such part of the money expended on improvements, as was not covered by the excess of the rents and the revenue collected from the grass farm over the outgoings. We consider it desirable to mention these and similar details in order that the nature of the Board's operations may be fully understood.

Sect. 3, Ed. VII c. 37, sections 80–1.

25. The Board were so satisfied with the result of their operation on the French Estate that they tried to obtain further estates for similar treatment and also tracts of untenanted land for the enlargement of holdings, but having failed, the following resolution was adopted and made public in their Fourth Report :—

[Cd. 7791–1895, p. 10.]

> "That the Congested Districts Board are in possession of information through their Inspectors, that there are large tracts of land that could be used to enlarge the holdings of small occupiers, and promote schemes of migration in the congested districts. The Board are, however, of opinion that it will be impossible for them to give due effect to this important department of their work unless more funds are placed at their disposal, and compulsory powers given to them to acquire such lands at their just value."

26. The Board took no further action towards trying to get the powers they asked for. On the 15th March, 1895, Clare Island was bought for £5,000, and, after re-settling it, the Board re-sold to the tenants direct, *i.e.*, not by means of advances under the Land Purchase Acts, as they were afraid that the Land Commission might demand a considerable guarantee under the Act of 1894. The tenants did not pay the Board the prices of their holdings in a lump sum, but in annuities of 3¼ per cent. upon the agreed prices. It may be noted that this was the annuity rate subsequently adopted in the Land Act of 1903. The greater part of the island was at the time of purchase held in rundale, and few tenants knew where their land or their rights began or ended. As there were no fences, the cattle and sheep roamed over the whole island, and when the crop was in the ground the tillage land had to be guarded against the incursions of the cattle by the members of the tenants' families. Hence the first work undertaken was the building at a cost of £1,600 of a stone wall, about five miles long, across the island separating the cultivable land from the mountain grazing, and over fifty miles of fences were constructed running from the wall to the sea, partitioning the cultivable land amongst the tenants. The Board spent more on the estate than they had paid for the fee, but as they re-sold for £10,000, they recovered a large part of their expenditure from the tenants in the shape of enhanced price, and lost on the whole transaction only a comparatively trifling amount.

57 & 58 Vic., c. 50, s. 1

27. On the 14th August, 1896, the Board bought in the Land Judge's Court the Leonard property, a poor estate, which was purchased at a price (£9,545) considerably in excess of the value put upon it by the Board's Inspector. Extensive improvement works had to be carried out, which cost more than the original price of the fee, and the net loss on the estate was over £3,000. This concluded the first period of the Board's land operations, during which they bought three estates, all out of their own funds. The total amount so purchased was 6,690 acres, of which a little more

IV.—*Continued.* Work of Land Purchase and Re-settlement prior to 1903.

than two-thirds was tenanted, and a little less than one-third untenanted, mostly rough grazing land. The total poor law valuation was £1,268, and the total price given by the Board was £18,799.

59 & 60 Vic., c. 47, ss. 43–5.

28. After the passing of the Land Law (Ireland) Act of 1896, the second stage of the Board's purchases began. The most important change made by the Act was the power given of getting advances from the Land Commission for the purchase of estates from landlords instead of having to buy them out of their own funds. The advances were made, as were all advances at the time, in Guaranteed Land Stock, and the Board realised at the price of the day and paid the landlord the agreed price. When the stock stood above par, as was the case until 1900, they made a profit; when it stood below par they lost; in all the Board made a net profit of about £2,000. They paid a 4 per cent. annuity (interest and sinking fund) on the amount thus advanced to buy an estate, until it was re-sold, and as each holding was re-sold to the tenants the Land Commission "wrote off" a corresponding amount from the Board's debt and refunded to them the amount of sinking fund they had paid. The Board, however, had the option of buying stock and lodging it in redemption of their debt, and this they generally did after the passing of the Act of 1903. They were not, however, authorised to get advances for the purchase of a tenant's interest, and were therefore forced to buy out of their own funds, a practice which still continues and to which reference will be made later.

See paragraph 47.

See paragraph 199.

62 & 63 Vic., c. 18.

29. There was a curious provision in the Act of 1896 which prohibited the Board from selling to a tenant a holding under £10 valuation by means of an advance under the Land Purchase Acts. No doubt it was, and is, desirable that uneconomic holdings should not be stereotyped and £10 valuation is probably as fair a standard of an economic holding as can be devised, but holdings below even £5 valuation were, and are still, passing by direct sale from landlord to tenant all over Ireland. Moreover some holdings below the £10 limit do not require enlargement even if land were available for this purpose. The Board considered that owing to the difficulty which they experienced in buying untenanted land, especially in proximity to the small holdings, this restriction threw obstacles in the way of the work of re-settlement, and accordingly it was repealed by the amending Act passed in 1899. This Act also enabled the Board to get advances from the Land Commission to redeem head rents and incumbrances on estates the Board purchased. Formerly they were compelled to find this money out of their own funds. The same Act gave the Board the first increase in their income, £25,000 a year, which brought the total fixed income of the Board up to £66,250. This nominal increase of £25,000, as has been already pointed out, meant a real addition of about £17,000 only.

30. We have said that many of the holdings bought by the Board were in rundale or intermixed plots. In some cases a holding of ten acres consisted of forty or fifty different plots and where there were a number of such holdings on an estate the re-arrangement was a matter of much difficulty as one unreasonable person could stop the whole scheme of re-settlement to his own detriment as well as to that of others. As the Act of 1899 brought no relief in this respect an attempt was made to meet this difficulty by an Act passed in 1901, but—as will be explained later—without success.

I. Edw. VII., c. 34.

31. After the passing of the Act of 1896, the Board bought a number of small estates in 1897 and 1898, but it was the purchase of the Dillon Estate in 1899 which marks the close of the chapter of small experiments, and the beginning of the period when land re-settlement became far the most important work. This estate was nearly four times as large as the whole of the seventeen estates previously bought by the Board, and its re-settlement is, perhaps, their most important operation, though at the same time it furnishes some examples of the disadvantages inherent in the system under which their work had to be carried out. The area of the estate was 93,000 acres, on which there were over 4,000 tenants paying a nominal rental of

£20,000. The great majority of the tenants had uneconomic holdings, and were largely dependent for their subsistence upon their earnings as migratory labourers in Great Britain. As there was little untenanted land in the neighbourhood, and as, in the opinion of the Board, it was not found possible to do much in the way of migration to a distance, the improvements effected were mainly re-arrangement of holdings, fencing, reclamation and drainage, and the Board's Chief Land Inspector stated before the Commission that in his opinion half the holdings were still uneconomic, though half that moiety might be made economic during the next ten years by agricultural improvements. The estate was bought for £325,000, of which £290,000 was paid to the landlord, and £35,000 was expended on the redemption of charges and purchase of tenancy interests. The estate was re-sold without any loss to the Board, though nearly £70,000 was expended on improvements, a result which is explained by the fact that £29,000 was available out of the excess of receipts over payments during the time the estate was in the Board's hands, and that the balance was recovered as enhanced price. The Board did not find it possible to enlarge most of the holdings on the Dillon Estate to any considerable extent, but were able to effect very great improvements in the condition of the holdings without loss, owing to the length of time the estate was kept in their hands. This gives rise to considerations of great importance in connection with the land work of the Board.

IV.—*Continued.*
Work of Land Purchase and Re-settlement prior to 1903.

I., Q. 3109–20.

32. It is obvious from the fact that seven-eighths of the holdings in the congested districts are under £10 valuation, that the first thing to be done is to increase the size of as many farms as possible. Where the small holdings are in proximity to untenanted land the work of enlargement is comparatively simple. Where the untenanted land is within a couple of miles of the small holdings relief can be effected by giving the tenant a portion of the untenanted land not immediately adjoining his own holding, but capable of being worked in connection therewith, or by inducing several of the tenants to give up their present holdings in the congested area, and to take new farms carved out of the untenanted land, the vacated holdings being divided amongst the remaining small holders. The chief obstacle in the way of this is the expense, as it is generally impossible to recover from the migrant the whole cost of the land and of the equipment of the new holding. Untenanted land cannot be bought cheap, and the highest annuity which it is safe to charge the migrant often does not suffice to pay for much more than the cost of the land, even after allowing for the occupation interest of the migrant in the old holding which he has vacated. Hence a large part of the cost of equipment has generally to be borne by the Board. Where the untenanted land is more than a mile or two away from the congested holdings, as is usually the case, greater difficulties are encountered. Even now the Board do not find it easy in many places to induce tenants to give up their holdings in exchange for better farms several miles away, and, as the Board did not succeed in getting suitable grazing land, they were unable, during the earlier stages of their work, to offer holdings sufficiently attractive to induce any but the poorest landholders to migrate to a distance. This fact was attended with several disadvantages, for very small farmers are less likely to succeed on a new holding than more substantial farmers, and the holdings they vacate do not go far towards relieving congestion amongst those who remain behind. Moreover, their migration is comparatively more costly than that of larger farmers, for, as the loss is chiefly on the buildings, the smaller the quantity of land sold with each house, the greater is the proportionate loss.

33. When the Board began to operate upon a larger scale, and specially when they commenced to buy untenanted land outside the scheduled areas, for the relief of the congested holdings, a new difficulty began to make itself felt. Those who lived in the vicinity of the grazing lands expressed with increasing strength their disapproval of the utilisation of these lands for relieving congestion in other parts of the country, and the knowledge that they were not likely to receive a friendly welcome, did not increase the willingness of the congests to migrate. The Board do not seem to have found it necessary to call attention in their

IV.—*Continued.* Work of Land Purchase and Re-settlement prior to 1903.

annual reports to this obstacle until their Thirteenth Report for the year ending March 31st, 1904, and undoubtedly this difficulty began to be felt most acutely after the passing of the Act of 1903.

Cd. 2275—1904, p. 17.

34. On some estates in the west of Ireland, any considerable enlargement of the holdings has, in the past, been impossible, owing to the absence of untenanted land in the neighbourhood and the difficulty of getting tenants to migrate. On these estates, however, the Board's intervention is very often required in other ways, though for lack of land it is not possible to make many of the holdings fully adequate for the support of a family. The estate may be susceptible of immense improvement, as was the Dillon Estate, by careful treatment in the shape of drainage, fencing, reclamation, and agricultural improvements, or the holdings may be in such a state of rundale or intermixed plots that a complete re-arrangement is most desirable, as was the case on Clare Island. In both such cases the Board considered it absolutely necessary to hold the estate in their own hands for a considerable time in order to carry out the improvements, and it is their practice to spend on these improvements, in addition to other funds, all the revenue collected from the tenants that is not required to pay interest on the purchase-money.

35. This action has been criticised on the grounds that the Board should be more expeditious, and, also, that as soon as an estate has been bought the rents payable by the tenants should be scaled down to the amounts that will subsequently be payable as purchase annuities. It has been suggested that a tenant may have some cause of complaint, if the difference between the rent paid by him during this period and the amount of interest that the Board have to pay on the purchase-money of his holding, is not devoted to carrying out improvements on his own holding. We desire to say very emphatically that we have no sympathy with these criticisms, and that if they are persisted in, the effect will be disastrous to the tenants themselves. It is easy to be expeditious when little transformation has to be affected in an estate, but work such as was carried out on the Dillon Estate and Clare Island requires time, and cannot be unduly hastened. As regards the other objection, we are of opinion that the Board should think of the estate as a whole and not of individuals, and that, so long as no tenant is charged more than his former rent, *less* a reasonable abatement (such as grading down a non-judicial rent to a second-term basis), where cause for abatement can be shown, he has no ground for complaint if the Board spend part of the rent he has paid upon other holdings on the estate, in the same way as an improving landlord might spend part of his rental on any holding. Under their present powers it is impossible to buy up all the estates in any particular district at the same time, and though the tenants on the Dillon Estate were obliged to go on paying rent for several years after the Board purchased the property, they were far better off than the tenants on the neighbouring estates that had not been purchased, since the latter were also paying rents, without having the excess of their payments over outgoings expended on improvements, and without any immediate prospect of becoming tenant-purchasers. Moreover most of the money paid by the tenants comes back to them in the shape of wages paid in connection with improvement works.

36. In order to understand the danger of persistence in this objection to the policy of the Board, it is necessary briefly to explain their system of financing their land work. Since 1896, when they buy an estate, the Land Commission advance the price of the fee, and, since 1899, the additional amount necessary to redeem superior interests. If the Board wish to purchase a tenant's interest in a holding the money has to be provided out of their own funds, and if they wish to make any improvements the money has to be paid either out of their income or borrowed from the Board of Works, and the Congested Districts Board are restricted both as to the amount and as to the purpose for which they can borrow. These loans and advances are repaid to a certain extent out of the excess of revenue over outgoings on the estate during the time it is held by the Board, some of the expenditure is recovered on resale to the

IV.—*Continued.* Work of Land Purchase and Re-settlement prior to 1903.

enants, and the balance remains a permanent loss to the Board. The amount hat can be thus lost is limited by the amount of their income available for his purpose. The amount that can be safely recovered from the tenants in he shape of enhanced price is also limited. It is most important, therefore, hat the Board should obtain as much revenue as they legitimately can, luring the time the estate is in their hands, either in the shape of grazing ents or by excess of rents over payments of interest. If they were not to do o their power to re-settle estates would be considerably lessened to the ermanent disadvantage of the tenants.

37. After the purchase of the Dillon estate the Board bought several more roperties prior to the passing of the Land Act of 1903, which marked a new tage in the land work of the Board as regards funds, powers, and extent f work, and it may be useful to summarise the progress made between 1896 and 903. In that period the Board bought forty-three estates containing 164,489 cres, of which less than one-eighth was untenanted. The total valuation was early £34,000, and the total price paid for the fee, for redemption of charges and enancy interests was about £570,000, whilst the tenants numbered over 6,500. he fact that less than one-eighth of the land bought was untenanted indicates hat, on many of the estates, the relief given by the Board was in the nature of nprovements in the holdings, rather than of enlargements of the area, and hat the majority of the holdings remained inadequate in size. It is only ight to add that the Board were greatly handicapped during this period by heir inability to acquire sufficient untenanted land and by the legal difficulties hich they experienced. On this point, it may suffice to note that, during the welve years that elapsed between the creation of the Board and the legislation f 1903, it was found necessary to introduce no less than six Acts of Parlia- See pp. 129–52.
ient amending the powers of the Board, in respect of their work of land urchase and re-settlement.

38. Up to the time of the passing of the Act of 1903 the Board had resold ss than half of the estates previously bought, and it was not until their ourteenth Report which was signed on the 17th October, 1905, that an esti- Cd. 2757–1905, p. 14.
ate of the financial effect of their dealings with these estates was made public. t was necessarily an incomplete estimate and even at present it is impossible o give the exact figures, as part of some of the estates remain unsold, but the llowing figures relating to the forty-six estates purchased prior to the pass- ng of the Land Act of 1903, may be taken as almost final :—

Payments.		Receipts.		
	£		£	£
1. Price paid to Vendors, ...	470,104	1. Excess of Receipts from Estates over outgoings—		
2. Redemption of Charges, ...	87,581	Receipts, ...	212,050	71,280
3. Purchase of Tenancy Interests,	31,322	Outgoings, ...	140,770	
4. Expenditure on Improvement Works.	171,228	2. Resale Prices, ...	650,635	653,705
		3. Value of land retained,	3,070	
		4. Loss, ...		35,250
Total, ...	760,235	Total, ...		760,235

39. As the Board had to provide out of its own funds or out of borrowed oney £171,228 spent on improvement, £31,321 expended on the purchase of enancy interests and part of the sums paid for the fee, and in redemption of harges, the Board advanced in respect of these estates over £250,000. art of this expenditure has been made since the passing of the 1903 Act, ut most of it took place before. Of the sum thus spent £71,280 was paid out of the excess of revenue over outgoings on the estates, during he time they were held by the Board, £35,250 is irrecoverable and the alance has been or will be recovered from the tenant purchasers on the ompletion of the re-sales. This balance goes in the first instance towards aying off money borrowed for making improvements, and the remainder epresents that part of the past expenditure of the Board out of their income

IV.—*Continued.* Work of Land Purchase and Re-settlement prior to 1903.

on these estates that is being or will be recouped. It is now estimated that of the total amount spent by the Board out of their income on improving these estates, the amount that will be thus recovered is about £92,000, still leaving the loss of £35,250 already mentioned.

40. It has to be noted that the sums mentioned above do not represent all the money expended on the improvement and re-settlement of estates bought up to the end of 1903. There was considerable expenditure through Parish Committees on somewhat similar work, and the cost of administration in connection with land purchase and re-settlement, which was naturally very heavy, had, like all the other administrative costs of the Board's work, to be paid out of their income, since no salaries or office expenses are defrayed by Parliamentary votes, as is the case with Government Departments. It is estimated that, including the proportion of the cost of office maintenance, repairs, printing, stationery, postage, telegrams and legal expenses, and of the salaries and travelling expenses of the staff properly chargeable to estate work—the proportion at present is about two-thirds—the total cost of administrative work connected with the purchase and re-settlement of estates, bought before the end of 1903, has been not less than £100,000.

See paragraphs 87–91.

V.—Work of Land Purchase and Re-settlement under the Act of 1903.

41. The passing of the Act of 1903 marked a new stage in the Board's land work. Quite apart from the provisions of the Act that did not affect the Board's purchases, *e.g.* the zone system, great changes were introduced into the system of land purchase throughout congested as well as non-congested Ireland, such as the reversion to the system of advances in cash (as existed before 1891) instead of in Guaranteed Land Stock, the grant of a bonus of 12 per cent. to bridge the gulf between the offer of the tenant and the demand of the landlord, and the change from an annuity of 4 per cent. payable for a period varying from about 42½ years to 49 years (subject to a thirty years extension if the tenant purchaser accepted a decadal reduction), to an annuity of 3¼ per cent. running for an estimated period of 68½ years. The Act moreover gave the Board an additional grant of £20,000 a year, and paved the way for transferring the agricultural development work to the Department of Agriculture, a change that resulted in £9,000 a year formerly spent on agricultural work being set free for the Board's other work. In many ways it brought financial and administrative ease, and undoubtedly contemplated a very great extension of the Board's work, but, for good or for evil, it contained certain provisions, one result of which has been the hampering of the Board in carrying out schemes of migration. More than one-fifth of the land bought by the Board under the Act of 1903 was untenanted, and consequently they have found it easier during the last four years to enlarge holdings than they did during the earlier stages of their work, when they were forced largely to confine their attention to improving the condition of the holdings in ways other than by enlargements, but the facilities which the Act provided for dealing with untenanted land brought difficulties in their train.

42. Before the Act of 1903, when the Board bought an estate outside the scheduled areas, they could utilise the land only for migrants from the congested districts or for the enlargement of holdings on the estate itself. This latter power was of comparatively little importance, as the Board bought such an estate only for the purpose of getting untenanted land, and consequently they seldom bought estates in non-congested districts on which there were many tenants. The Board had no legal power to enlarge the farms of small land-holders situated, not on an estate bought outside the scheduled areas, but in the neighbourhood of such an estate. These men, not unnaturally, felt aggrieved when they saw untenanted land in their vicinity being used, to their own exclusion, for the relief of others who were perhaps not much worse off than themselves, and consequently, as has been already noted, the reception they gave to the migrated congests became less and less friendly. Section 75 of the Act of 1903 sought to remove these difficulties by enabling the Board when they bought an estate outside the scheduled districts to enlarge holdings in the neighbourhood that were under

See paragraph 33.

V.—*Continued.*
Work of Land Purchase and Re-settlement under the Act of 1903

£5 valuation, but the wording of the section confined them to so using only such land as they did not require for migrants from the congested districts, and, as the Board practically never had any surplus untenanted land, the relief that the section afforded was somewhat illusory. Moreover, the Board could not enlarge any holding in the neighbourhood that was over £5 valuation, which is undoubtedly too low a standard. Section 75, moreover, contained a provision that materially affected the Board's progress, namely, the power it gave the Board to give surplus untenanted land to the sons of tenants in the neighbourhood. This created a new body of claimants, the satisfaction of whose demands would undoubtedly prevent the Board from fulfilling their functions of relieving congestion. In point of fact the Board has never had any surplus land available for distribution amongst the sons of tenants; still the legislative recognition given to the claims of landless men has hampered the Board in bringing in migrants, and apparently some of the claimants think that they will eventually obtain part of the land bought by the Board, if they succeed in making the introduction of migrants sufficiently difficult.

43. The seriousness of this situation has been intensified by the fact that the Act of 1903 introduced a new feature into land purchase all over Ireland. Formerly advances could be obtained only for the purchase of holdings actually occupied by tenants, except in three minor cases. The new Act empowered the Estates Commissioners to buy estates whether tenanted or untenanted, and to divide the untenanted land amongst the tenants on the estate and their sons, and small landholders in the neighbourhood. The result has been to create a feeling that all untenanted land should be ear-marked for farmers in the neighbourhood, or for the sons of those who live on the estate, and other landless men. Consequently in some districts, notably in East Galway, the intervention of the Estates Commissioners, who distribute the grass land they buy amongst those who live in the neighbourhood, is preferred to that of the Board, who consider, and we think rightly, that the claims of congests who migrate from the West, if not superior to those of small land-holders in the neighbourhood, are undoubtedly superior to those of the sons of tenants and other landless men who happen to live near the grass lands. We shall refer later to this question, as it goes to the very root of the possibility of relieving congestion; it is sufficient to remark here that the difficulties arising from this question have very seriously impeded the Congested Districts Board during the last three years in their work of re-settlement.

See paragraphs 124–30.

44. Since the passing of the 1903 Act the Board have re-sold most of the land that they have acquired under previous Acts, but they have as yet succeeded in disposing of only a very small portion of the large amount purchased under the Act of 1903. The following figures show the purchases and re-sales of land at the date the new Act came into operation and at certain subsequent periods:—

Date.	(A.) Cost Price of Lands on Board's hands under all Acts at dates in 1st Column.	(B.) Cost Price of Land acquired by Board in each period under 1903 Act.	(C.) Cost Price of Land sold up to 31st Oct., 1903, and subsequently in each period.	(D.) Resale Price of Land sold up to 31st Oct., 1903, and subsequently in each period.	(E.) Cost Price of Land sold during each period which had been purchased since 1st Nov., 1903.	(F.) Resale Price of Land sold during each year which had been purchased since 1st November, 1903.

VI.—Delays in work of Re-sale, Financial Difficulties, and Restrictions on Purchasing Power.

45. It will be noticed that during the first two years after the passing of the Act the Board bought a large amount of land and during the last two years comparatively little. Moreover, while they have disposed of a considerable amount of land, it was mostly property that had been in their possession before 1st November, 1903, and during the last two years they have not succeeded in increasing their average output, which has been about £100,000 a year since the passing of the Act.* The difficulties in the way of migration and the law's delays have retarded them to a certain extent, but these have not been the chief causes of the comparatively slow progress made. This has been mainly due to the fact that the work of re-settlement had to proceed slowly, owing to lack of funds, while the reduction in the rate of purchase has been due to restrictions, which the Treasury considered it necessary to impose, in view of the extent to which the funds at the disposal of the Board were mortgaged. The matter is rather complicated, but, as it is of very great importance, we deem it desirable to deal with it in detail.

46. After the passing of the Act the Board started purchasing land on a large scale. As the Board are not only a purchase and sale department, but an improvement agency, it is impossible on poor estates to recover all the money spent, and some of this expenditure must be regarded as an irrecoverable loss to be defrayed out of their income. A considerable amount of the money which the Board expended out of their income on estates purchased before the Act of 1903 came into operation, is repaid as the re-sales are completed, and therefore is available for meeting any future loss on estates or for any other purpose. When the Board started buying under the Act of 1903 they did not know what the exact amount thus available would be, as a considerable amount of the expenditure on the estates bought before the 1st November, 1903, still remained to be provided out of their income after that date, and the greater part of these estates still remained to be sold. It was, however, clear that, unless and until they got another increase in their income, the total amount of money they could afford to lose on estates would be the amount of their old expenditure that was recoverable, *plus* whatever they could set apart for loss under this head out of their annual income, *less* whatever remained at the end of 1903 to be still expended on the old estates. In order to estimate the amount of land they could deal with, it was also necessary to know approximately what the rate of loss was likely to be. It does not appear from the Board's reports whether they felt themselves in a position to make a satisfactory estimate when they commenced purchasing estates under the 1903 Act, but it was not until the issue of the Fourteenth Report, which was signed on the 17th October, 1905, that an estimate of the loss incurred on the old estates was made public. They then estimated the loss at about 5½ per cent. upon the cost price of the estates. It now appears that the loss will be slightly larger.

Cd. 2757—1903, p. 14.

47. After the passing of the new Act, the Board soon found that they had to pay considerably more for land, especially for untenanted land, than under previous Acts, and that this would prevent them from recovering from the tenants as much of their expenditure upon improvements as they formerly had recovered, and would consequently involve a rate of loss higher than before the passing of the Act. On the other hand they gradually found that it would be possible for them to recover more of their expenditure on the old estates than had been originally contemplated, and it also became evident that they were making a considerable profit on the redemption of the advances of Guaranteed Land Stock, which had been made to them for the purchase of the old estates. On re-sales the Board were paid in cash by the Land Commission, and, like everybody else who had received an advance from the Land Commission in Guaranteed Land Stock, they were able to extinguish their debt by buying that stock at a very considerable discount, and handing it to the Land Commission instead of cash in payment of their debt.

See paragraph 28.

* It should be noted that the Board has re-sold land to the value of about £100,000 during the quarter 1st January–31st March, 1908.

VI.—*Continued.*
Delays in work of Re sale, Financial Difficulties, and Restrictions on Purchasing Power.
I., pp. 247–62.
XI., pp. 112–29.

48. When the Board submitted their estimates for 1905-6 to the Treasury, as they were bound to do under the Act of 1891, that body felt it their duty to draw attention to, what seemed to them, the unsound financial condition of the Board. The views both of the Board and the Treasury are set out in the letters that have been printed in the Appendices to our First and Eleventh Reports. The correspondence is lengthy and somewhat hard to follow, but the facts that emerge are these. In October, 1905, the Board's purchases under the Act of 1903 had reached a total of £1,100,000. The Board had by that time realised that the loss on re-sale would not be less than 8 per cent., and that consequently to deal with the land already bought would involve a permanent loss of £88,000. The amounts repayable to the Board on the re-sale of all the estates bought before 1903 and the profits the Board were making, by paying off their debt to the Land Commission with Guaranteed Land Stock, would, when realised, be more than sufficient to make up the £88,000 required. It is now known that the amount of their former expenditure repayable to the Board will be £92,000 and that the profits on the dealings with Guaranteed Land Stock will be £23,000, making a total of £115,000. As regards future sums to be provided for loss the Board stated that they could not devote more than £11,000 a year out of their fixed income towards meeting the loss on re-sale.* On the basis of a loss of 8 per cent. this would mean that, after the Board's reserve was exhausted, their future purchases could not exceed £140,000 annually unless their fixed income was increased. They did not, however, propose to reduce their annual purchases at once to this figure. Apparently there was a suggestion that they might deal with additional land to the value of £100,000 before the end of the financial year 1905–6, and they indicated that it would be desirable to deal with land to the value of £300,000 in each of the years 1906-7 and 1907-8, while they proposed to reduce their purchases after that year to the amount of £140,000 annually, if they did not get an increase in their income.

49. If these tentative estimates as to the amount of land the Board might buy had been carried out, the Board would now have acquired under the Act of 1903 £1,800,000 worth of land, and the loss at 8 per cent. on this figure would require £144,000. Of this amount, part would have been provided out of their income, and the balance from the reserve that arose from repayments on old estates and profits on Guaranteed Land Stock. As this reserve is now estimated to amount to £115,000, the Board's financial position, but for two facts, would have been sound—though, owing to the necessarily speculative nature of the estimates made as to the amount of the reserve, the soundness was not quite evident in October, 1905. Of the two facts, the more important one is not dealt with in the correspondence, namely, that the 8 per cent. loss was only a speculative estimate, and might turn out, as it has, to be very much below the actual figure. The other fact which the Treasury emphasised was that the situation was somewhat more complicated than the Board appeared to think, since the loss of 8 per cent. resulted from the expenditure of a much larger sum upon improvements. Though most of this sum was ultimately repaid by the tenants or met out of the excess of receipts over payments during the time the Board had the estates in hand, it had in the first instance

* The question was raised before the Commission whether the Board might not well have devoted more than £11,000 out of their fixed income to what is their most important work, land purchase and re-settlement. It was pointed out that the Board had devoted £10,000 a year from their income to land re-settlement before the passing of the Act of 1903, and that after that date the amount allocated to this purpose was increased by only £1,000 a year, though the Board had received an annual increase of £20,000, and though the transfer to the Department of Agriculture and Technical Instruction, at an annual cost to the Board of only £2,000, of the work of agricultural development, had the effect of setting free for other purposes a sum of £9,000 per annum. In reply, it was explained that the increased grant was not given solely for land purchase, that other branches of the Board's work also required more money, and that in point of fact most of the increased grant had been required for the increase in the cost of administration due to the extension of the land work, and by the increased sums spent, through Parish Committees, upon work which was very similar to that done in the re-settlement of the estates. No doubt if the Board thought they were going to get no further increase of funds they would have arranged to allocate, according as their reserve was used up, a larger proportion of their fixed income to estates work than they did, even though it necessitated decreasing the very useful if less essential work done by other branches.

I., Q. 4077 *et seq.*

VI.—*Continued.* Delays in work of Re-sale, Financial Difficulties, and Restrictions on Purchasing Power.

to be advanced out of the Board's funds or to be borrowed by them. Their borrowing powers were restricted to the amount of the recoverable expenditure, which was seldom more than one-third of the total expenditure. Hence the demands on the Board's income for the balance of the money to be spent on improvements would be heavy. Any delay in re-selling estates bought prior to 1903, and so in recovering part of the reserve, might make the demands on the Board's income heavier than it could bear. In such a contingency the Board would be forced to stop part of their improvement work until more money came in, and so to keep certain estates longer on hands than would otherwise be necessary. This is precisely what has happened.

50. The Treasury held that it would have been a sounder policy for the Board to have bought less land in 1904 and 1905, and so to have avoided the danger of the work of improvement being stopped for want of money, and the administrative difficulties that would arise from having a very large amount of land on hand for a long period. If the Board had bought on a smaller scale at first, the expenditure of their reserve funds would have been spread over a greater number of years, there would have been less danger of financial embarrassment, and the ultimately inevitable reduction of the Board's land purchase operations to the amount of £140,000 a year would have been postponed.

51. The Board's view from 1904 onwards appears to have been that an immense increase in their land work was contemplated by the 1903 Act, under which they were permitted to have on hands at any one time untenanted land to the maximum value of £1,237,500 (thirty times the interest—£41,250—on the Church Surplus Grant, which was their original endowment). The Board seem also to have been of opinion that the additional income given under the Act was not adequate for this increase in the land work, and was largely intended for other purposes, and that consequently, as soon as they had exhausted their reserve, *i.e.*, in two or three years time after the passing of the Act, a large increase of income would be given. Otherwise their land purchase operations would have to be reduced to £140,000 a year.

I. p. 250.

52. The Treasury in their letter of the 8th August, 1905, in which they expressed doubts as to the financial soundness of the Board's position, stated that as the Board already held as much land as the funds apparently at their disposal would enable them to deal with, they should make no further extensive purchases until they had effected considerable re-sales.

I. p. 256.

This opinion was reiterated in their letter of 28th February, 1906, and since then, as it has not been found possible to complete the re-sale of much land, the Board have done little in the way of purchase, beyond completing negotiations to which they were bound, so that the price of land bought under the new Act is now just under £1,390,000.

53. The effect that an increase in the rate of loss would have upon the Board's financial position does not seem to have been adverted to in the correspondence, and it is not clear how far the Board were apprehensive of this factor, at any rate at the end of 1905. The Board apparently considered at the date of signing their Fourteenth Report that their net loss on the re-sale of estates bought before 1903 would be 5½ per

I. p. 253.

cent. on the price of the land. In the Board's letter to the Treasury of the 9th October, 1905, it was stated that they contemplated that the future loss would not be less than 8 per cent. Obviously, a much more serious objection, than those raised by the Treasury, to the extent of the Board's operations, lay in this uncertainty as to the rate of loss. Thus, the Board's reserve fund would be sufficient to meet the loss on all the land bought since the passing of the Act of 1903, only if the rate of loss were not greater than 8 per cent. In point of fact the Board soon realised the loss was likely to be greater than had been anticipated, and in a letter to the Treasury, dated 15th

XI. p. 112.

April, 1907, they estimated the loss as 12 per cent. instead of 8 per cent., and the evidence given before the Commission last January would seem to show that the loss on re-sale may exceed even 12 per cent. A loss of 12 per cent. upon the purchases effected to date would involve a total loss of

£167,000. By assigning all the reserve fund to this purpose, £115,000 can ultimately be provided, and the balance can be met by the amount available out of the Board's annual income since 1st November, 1903, before the end of the present year. If, however, only £11,000 a year were available henceforward, their annual purchases in future would be limited to less than £100,000, and if the rate of loss should rise above 12 per cent. future purchases might be indefinitely stopped.

VI.—*Continued.* Delays in work of Re-sale, Financial Difficulties, and Restrictions on Purchasing Power.

54. The present financial difficulty has arisen from the fact that though only a comparatively small percentage on the cost of an estate will be lost, the improvement works to be carried out on the estates already bought by the Board require the temporary use of larger sums than they can command. Moreover, the Board have not been able to realise as soon as they anticipated that part of the money spent on the old estates which was repayable, owing to delays in effecting re-sales, and they were unable to make up for this deficiency by borrowing. During the last few years very much less land has been re-sold than was anticipated, and the Board found that they would be obliged to stop a number of their improvement works last February unless a special loan of £25,000 was made by the Treasury, and the recent letters from the Board to the Treasury, show that in order to prevent further dislocation of their land work, they have been obliged to abandon or curtail their estimates for other ameliorative work during the financial year 1908–9. It is only fair to point out that, apparently, the Board have at present sufficient assets to meet all their liabilities, unless the loss exceeds 12 per cent, and their difficulties are mainly due to the fact that, owing to their limited borrowing powers, the realisation of these assets is postponed. It is also right to point out that the Board have apparently always considered that their present income was an experimental one, subject to periodical increases as occasion arose.

XI. 121–9.

55. Another and even more serious result has attended the restrictions which the Treasury felt compelled to put upon the purchasing powers of the Board, in view of their doubtful financial position. The Board were restricted to purchasing a limited amount of untenanted land and were restrained from concluding certain negotiations into which they had already entered for the purchase of tenanted estates, a course which led to very grave trouble in the districts affected. It was, moreover, represented to the Commission that the continuance of these restrictions would greatly increase the difficulty of relieving congestion, since many landlords wished to enter into agreements for the sale of their land before the 1st November next, lest the rate of bonus should, as from that date, be changed to their detriment. As the Board were unable to enter into agreements with these landlords, the estates were likely to be sold either to the Estates Commissioners or direct to the tenants. It was stated that in the latter case very many uneconomic holdings would be stereotyped, and that in the former case much of the land required for the relief of congestion would be otherwise utilised.

56. Upon the receipt of this information, in October last, the Chairman of the Commission placed himself in communication with the Chief Secretary to the Lord Lieutenant of Ireland, on behalf of the Commission. Referring to the friction that had already arisen, and was likely to increase, by reason of the Board being forced to suspend negotiations, that had been already set on foot for the purchase of over £400,000 worth of tenanted land, he advised that the Board should be empowered forthwith to complete the purchases of these estates. He also recommended that, in addition to the power which they possessed of buying grass land, they should be given a small discretionary power for the acquisition of other tenanted estates, which might be available on favourable terms, and might not be so advantageously acquired, if at all, after a lapse of six months or a year. He stated that while the Commission were not then in a position to submit specific recommendations, it was evident that the purchase of land in the congested districts must be effected through some public authority, having power to resell at a loss after improvement, and that, therefore, it did

VI.—*Continued.* Delays in work of Re-sale, Financial Difficulties, and Restrictions on Purchasing Power.

not seem that any financial advantage could be secured by postponing the acquisition of estates, which were suitable for re-settlement, and might be cheaply acquired at the moment. We have to express our regret that it was not found possible to give effect to this suggestion.

VII.—Agricultural Development.

57. During the early years agricultural development was regarded as perhaps the most important branch of the Board's duties. This work was carried out with the assistance of the Agricultural Branch of the Land Commission from 1891 until 1899, when that Branch was transferred in part to the Department of Agriculture, and in part to the Board. Up to the transfer of this work to the Department of Agriculture at the end of 1903, more money had been spent on it out of the Board's income than upon any other branch of its work. The Board's efforts were directed towards arousing the people's attention to a better knowledge of agricultural processes, and with this purpose object-lessons were given by means of experimental plots and example holdings. Instructors were appointed in many districts who taught and helped farmers to adopt better agricultural methods, and assistance was given towards improving the breeds of live stock and towards sheep-dipping, fencing, potato spraying, and the purchase of agricultural implements and good seeds, as well as in the management of poultry, bee-keeping, and fruit culture. At a later stage inspectors were appointed who in addition to supervising the work of the instructors saw to the improvement of breeds of cattle, horses, sheep and pigs, and concerned themselves generally with the agricultural requirements of the people. Over £22,000 was spent on instruction.

58. Stallions were stationed each season in the congested districts to serve the local mares at a very small fee, the average annual number available being about twenty-six, and a number of stallion asses were also put out. The sires were owned by the Board, and after standing at different centres during the season, were kept during the rest of the year at the Board's stud farm at Chantilly in County Dublin. Of the seventy-two horses that were thus placed out in the twelve years 1891-1903, forty-one were hackneys, and though these sires were popular in some districts the consensus of opinion even in the congested districts seems to have been against their general use. The total net expenditure on horse-breeding schemes was £60,000, and it is extremely doubtful whether the results achieved were at all commensurate with this expenditure. The method of improving cattle that was found to be most successful was the purchase of good bulls by the Board and their re-sale to farmers in the congested districts at considerably less than their cost price. The purchasers were obliged to keep the bulls for at least two or three years, during which time they were available for a stipulated number of cows belonging to small farmers at a maximum service fee of 2*s.* 6*d.* Over 1,000 bulls were thus placed out in the congested districts, of which more than one-third were Shorthorns, nearly one-third Galloways and the remainder were mainly of the Aberdeen Angus breed. The total cost of the cattle scheme was £22,000, and undoubtedly very considerable improvement was effected in the breeds of cattle in the congested districts, though the Board's efforts to improve the Kerry cattle met with little success, especially in the Cahirciveen Peninsula, owing to the scheme not being taken up by the Kerry farmers. Similar efforts were made to improve the produce of swine and sheep, but the prevalence of scab interfered with the Board's plans under the latter head, and led them to devote a great deal of attention to sheep dipping. The net expenditure on the swine scheme was about £1,000, and on the sheep scheme about £4,000.

59. One obstacle that the Board met with, especially in the poorer parts of the country, arose from the number of miserable bulls that are allowed to run loose, as it is often difficult to get people to recognise that the payment of half-a-crown as a service fee for a good bull is more economical than the payment of a shilling, or no payment at all, for the use of an inferior animal. In this connection, it may be mentioned that it was more than

once suggested to us that sires might be licensed, and that no animals should be kept for service, unless they come up to a standard to be settled by the authority responsible for the improvement of live stock. It was also suggested that the licence duty should be collected by, and belong to, the County Council. There seems to be a good deal to be said for this suggestion, at any rate so far as the poorer districts are concerned. The chief difficulty encountered by the Board in effecting a permanent and general improvement in the breeds of all animals was the tendency of the farmers to sell all their best young stock, and to keep the inferior ones for breeding purposes.

60. The Board spent nearly £7,000 on their attempt to improve the breed of poultry, a very important matter for the people in the congested districts, where practically everyone keeps poultry, though a few have no cattle or sheep, and the industry is, no doubt, capable of very great development. Though various schemes were tried, Mr. Porter, the chief agriculturalist employed by the Board, gave evidence that the schemes were not very successful in producing permanent results, and that in not more than five per cent. of the poultry in the congested districts is there now any trace of the work of the Board in the shape of improvement. The lack of sustained popular interest in the scheme seems to have been mainly due to the fact that under the existing conditions of marketing no better price was generally obtained for a large clean fresh egg than for a small dirty stale one. There seems to be a very great field for co-operative organisation in the poultry business, since by it much improvement could be effected in the grading, packing, and marketing of the eggs. Considerable attention was devoted to bee-keeping, the net expenditure being about £1,700, and some good seems to have been done by giving instruction, supplying improved hives, and marketing the produce. Twenty-seven local bee-keeping associations, established under the Board's auspices, were assisted by loans to obtain supplies at cheap rates.

III., Q. 13756.

61. An important item of the Board's expenditure was in connection with the Knockboy plantation, near Carna, in Connemara. The Irish Government had in 1890 bought 820 acres of rough mountain and bog, with the object of making an experiment in forestry, and, incidentally, of relieving local distress. Considerable progress had been made before the establishment of the Board, and on its creation, the work was transferred to them. A sum of over £9,000 was spent and the experiment seems to have been a complete failure. Whatever may have been the causes, about which opinions differ, the Board can hardly be held to be fully responsible for the lack of success, as they had to take over and carry out work which had been started before they came into existence. The Board also spent money on demonstrations and experiments connected with market gardening, early potatoes, the plantation of shelter belts, and fruit trees.

62. A very important part of the Board's work was the attempt made to popularise potato spraying. Instruction was given in spraying in all congested districts, and in the year 1895 spraying materials that cost about £1,400 were given away and subsequently spraying machines were sold at about three-quarters of the cost price; in all about £5,000 was spent on this work. The chief difficulty met with was the tendency displayed to neglect the carrying out of any small repair that was necessary to the spraying machine, and still more to give up spraying after a good season and resume it only when there had been another visitation of blight. The Board spent, in all, over £140,000 on agricultural work in twelve years. They advanced £14,343 in loans for agricultural purposes, and £10,588 was outstanding at 31st March, 1907. The approximate cost of the administration of their agricultural work was over £74,000.

XI. p. 54

63. In 1904, the agricultural work of the Board was transferred to the Department of Agriculture and Technical Instruction and in order to make clear the effect of that change, it may be as well to point out that, prior to 1891, little aid was given to agriculture in any part of Ireland by the Government, outside of the work done in the Albert Institution, Glasnevin, the Munster Institute, Cork, and the rapidly diminishing School Gardens (all of

VII.—*Continued.* Agricultural Development.

which were administered through the Commissioners of National Education). A small sum was expended on the up-keep of the Agricultural Branch of the Land Commission, and £5,000 was assigned out of the probate duties, for the promotion of horse-breeding, and administered by the Royal Dublin Society. The only other assistance given was such help as resulted from the annual expenditure of £1,562 on prizes known as Queen's Plates at certain race meetings in Ireland.

64. In 1891 the Congested Districts Board was established and spent during the next twelve years considerable sums, as already mentioned, in agricultural development within the scheduled areas. In April, 1900, eight years after the creation of the Congested Districts Board, a new department of Government came into existence, charged with the development of agriculture and technical instruction in the non-scheduled portion of Ireland, and for the agricultural work a yearly income of about £100,000 was provided. Most of the work was to be carried out through County Committees and no assistance could be given by the Department to a county which did not raise a rate in aid. The assistance given by the central authority to schemes administered locally takes the form of paying 25*s.* to 30*s.* for every £1 raised by the rate, but a considerable amount of money is spent from head-quarters on agricultural matters of general importance.

62 & 63 Vic., c. 50.

65. The Department was excluded, by section 18 of its Act, from expending any of its endowment within the scheduled areas, within which it could only operate at the Board's request, and with the Board's funds. Thus there were two bodies promoting agriculture in Ireland; one operating over poor western districts, and the other over the remaining five-sixths of Ireland. There were, however, administrative difficulties in the way of drawing a rigid line of demarcation between the activities of the two bodies. The unit of rating for the Department's Act was the county and the rural district, while the unit of congestion was the electoral division, consequently unless the rural district was wholly congested or wholly non-congested there were rating difficulties. In the former case the Board, and in the latter case the Department, alone operated. If, however, the rural district was partly congested and partly non-congested, the Board could operate over only part; if the other authority operated at all, the County Council had to levy a rate over the whole district, though the rate and the grant given in aid of the rate could be spent only in the non-congested portions of the rural district. The complications seem to have done much to hinder and to retard the work of the new Department.

66. To meet the difficulty, the Congested Districts Board in the case of rural districts mainly non-congested, gave for a year a grant in aid in respect of the rate raised off the congested electoral divisions, and the whole sum was administered under the Department. No rate was levied as a rule in rural districts wholly congested or mainly congested, and, while the Board operated in the scheduled portions of the latter districts, nothing could be done to promote agriculture in the non-scheduled portions of such localities. In 1902 an amending Act was passed giving County Councils power to exempt any electoral division from a rate in aid of agriculture, but this Act does not appear to have been made much use of by the local authorities. However, until the next change took place, at the end of 1903, agriculture could be developed in all the non-congested portions of a county, by the Department and the County Committee jointly under a county scheme, and in the congested portions by the Board under different schemes. There were obvious disadvantages in having two separate bodies within the same county promoting different schemes of agricultural development in districts that were not only adjacent but also intermixed. The machinery applied by the two bodies differed, the Congested Districts Board administering their scheme centrally, while most of the work of the Department was done through the County Committee. Invidious comparisons were bound to be drawn and requests made to have the most popular provisions of each scheme applied in districts for which they were not intended.

2 Edw. VII., c. 3.

VII.—*Continued.*

Agricultural Development.

67. The Land Act of 1903 repealed the 18th Section of the Agriculture and Technical Instruction Act of 1899 and made it possible for the Department to expend its funds in the congested districts as elsewhere, but made no addition for this purpose to their endowment, which was originally given for non-congested Ireland. Shortly after the passing of the Act it was agreed, between the Irish Government, the Congested Districts Board, and the Department, that the work of agricultural development should be transferred from the Board to the Department. It is evident from Mr. George Wyndham's minute of the 13th October, 1903, that the transfer was effected in order that the Board might concentrate their attention and their funds upon the primary work of land purchase and re-settlement. In order to make the transfer effective for this end it was arranged that, though the Department were to carry out the work on which the Board had been spending £11,000 a year, the annual contribution to be given by the Board to the Department should be only £2,000 (the equivalent of a penny rate over the congested districts). It was stated by Mr. Wyndham that, as the primary work of the Congested Districts Board was completed, it would be possible and proper to liberate its funds in aid of the secondary work of the Department, which, he declared, was secondary only in order of time and in the sense that it would fluctuate more largely, when super-imposed on the primary work of purchase and the relief of congestion. In the meantime, the Board, it was stated, would be willing to supplement the work of the Department, where especial cases of wide-spread poverty called for special assistance. The scheduled districts would still enjoy exceptional assistance in respect of land purchase and re-settlement, industries, and fisheries, but they would surrender, in respect of agricultural schemes, a part of their right to preferential treatment. It was proper, the minute stated, that the Congested Districts Board should, in common with other departments, effect some economy to push forward the primary work of land re-settlement, and it was also fitting that the Department of Agriculture should make a contribution to the same object, by undertaking labour in a somewhat larger field. The proposed transfer, it was suggested, would not deplete the savings effected by the Department or frustrate the policy it had pursued, for, as the primary work of the Congested Districts Board was completed, further funds would be available for pushing on the secondary work of agriculture and technical instruction on a sound foundation. The result of this change was that since the beginning of 1904, the work of agricultural development has been carried out by the Department, the Board's duty being to contribute an annual sum of £2,000. The effect of this change will be considered later.

I., p. 269.

See paragraphs 236–7.

VIII.—Fisheries.

68. One of the first and most important steps taken by the Board was to develop the resources which, in the shape of sea fisheries, lay at the door of many of the inhabitants of the congested districts. In order to make clear the nature of the fishery development carried out, it is necessary shortly to review the history of the fishing industry in Ireland generally. The fisheries in the south-west and middle west were long ago of great importance, but were mainly carried on, in the 16th century by Spanish boats, and in the 17th century by the French and Dutch, and, so far as modern history is concerned, it was not until the 18th century that the Irish western fisheries became of Irish importance. After the settlements of the 17th century, and the consequent curtailment of the lands held by the majority of the native race, the people began to depend for their food, less on the produce of the flocks and herds and more on the potato, a tendency that increased with the increase in population. Hence fish was sought after, as a useful supplement to potatoes, and the Irish sea fisheries began to be worked with considerable vigour by the native population, and bounties were introduced to stimulate the trade. Towards the end of the 18th century the north-west fisheries were very successful, Burtonport and Killybegs being important centres of the herring fishery, and an export trade in cured herrings was carried on with the West Indies. The early years of the 19th century seem to have been a period of decline, but with the establishment of the Commissioners of Irish Fisheries in 1819 there was a marked though short

VIII.—*Continued.* Fisheries.

revival. In April, 1830, the bounties were withdrawn, and the fisheries which had already begun to decline became further depressed. An important inquiry had been held in 1835 into the condition of the Irish fisheries, but the Bill which was introduced into Parliament to give effect to their recommendations was dropped. There was another temporary revival a few years later, but after the Famine there was a general collapse, there being no efficient authority charged with the development of Irish fisheries.* The artificial state of things produced by the bounties had ceased, and the natural local market had diminished with the fall in population, whilst the fishermen had mostly died or emigrated.

69. Some years later began elsewhere the revolution in the fishing industry, caused by the application of steam to traction on land, and later on sea. Speedy delivery, telegraphic communication, and the general utilisation of ice for packing led to fresh fish being delivered all over England, in places where it had been unknown before, and provided the first opportunity for the revival of the Irish sea fisheries on a large scale. In 1862 the great spring mackerel fishery was established off the coast of Cork, and soon after stations were opened in Kerry. A few years later about 700 boats, of which less than one-half were Irish, were engaged in this fishery, which from various causes has now been declining for some years. In 1887 the autumn mackerel fishing was started, the fish being cured and exported, mostly to America. In 1870 the Inspectors of Irish Fisheries had been appointed as a separate body, but they were given no funds to carry out fishery development, their duties being confined to the administration of the fishery laws and, after 1874 and 1884, to the administration (in conjunction with the Board of Works) of the Irish Reproductive Loan Fund and the Sea and Coast Fisheries Fund respectively—funds that were mainly used for the purpose of making loans for fishing boats. In 1891, as has been already mentioned, these funds, with the exception of £20,000, were transferred to the Congested Districts Board. Eight years later, when the Inspectors of Fisheries were merged in the Department of Agriculture and Technical Instruction, the balance of £20,000 was handed over to that Department, and an annual sum of £10,000, out of their endowment fund, was earmarked for fishery protection and development.

See paragraph 22.

70. At the time of the establishment of the Board the Cork and Kerry fisheries were being conducted on a commercial basis, and modern methods of catching and curing had been adopted there, but north of the mouth of the Shannon the fishing was most indifferent, the once great Donegal herring fishery had almost entirely disappeared, and importation was not unknown. In the south-west the means of transit both by rail and steamship were fairly satisfactory, and landing accommodation rather than market facilities were required. In the northern division the transit facilities were quite inadequate, and the establishment of a market was necessary before modern boats and expensive gear could be profitably introduced. At the same time piers and boat-slips were much wanted at some places.

71. Our attention has been so frequently called during the public sittings to this question of marine works that it may be useful briefly to state what has been done in the past. Between the beginning of the 19th century and the establishment of the Board, a sum of £782,980 was expended in Ireland on piers and harbours, expressly for fishery purposes, and more than double this amount was spent on certain royal harbours, which may have been of some use to the fisheries, but which, being situate on the east coast, are of no importance as regards the congested districts. Of the sum expended on piers and harbours expressly for fishery purposes, £214,880 (including £45,105 provided by local contributions) were expended on piers and harbours in what have been since scheduled as congested districts. Of these sixty-six works, costing £136,280, have been found of some use for fishery purpose during the time that the Board have been at work.

* The Commissioners of the Irish Fisheries were abolished in 1830, and the winding up of their work was left to the Board of Inland Navigation. In 1842 the Board of Works became virtually the Fishery Authority.

72. It has been very generally stated that most of the money spent on Irish marine works up to the last ten years of the 19th century was somewhat injudiciously applied. The object of some of the expenditure seems to have been to provide employment rather than to carry through necessary or even useful works. There seems to have been no continuous administration by a body acquainted with Irish needs. The Board of Works, on at least one occasion, were forced to follow the recommendations of a temporary Commission, which had neither expert nor local knowledge, and the various bodies concerned with the selection of sites had to trust to general indications, there being no important fishing in progress to guide them. They seem to have been bewildered between exaggerated accounts of the fishing possibilities, on the one hand, and the limitations of money, on the other. They were asked nearly everywhere to build deep water harbours for large fishing boats and small slips for small fishing boats. Ideal accommodation, however, could not be provided everywhere and expenditure had to be distributed over the coast. It was stated in evidence that, as they apparently could not decide what was really required, they struck an average expenditure for each district. This average was, however, often extravagant, often niggardly, and sometimes ineffective, as at no place did it suffice to make a harbour good enough for a large boat, and the piers that were built were often quite unnecessary for small boats.

73. Since 1892, 202 piers, slips, or harbour works at 148 different places have been executed by the Board at a net cost of £64,422, of which 185 have been of use to the fisheries, the rest being intended for facilitating other trade, such as the export of turf or the landing of sand or seaweed. Since 1891, certain other works have been carried out by the Board of Works mainly under the Marine Works Act of 1902, which provided about £100,000 to be expended within the congested districts and on the harbour of Liscannor, in County Clare. Towards these works the Board have given certain contributions, and the Department gave a grant in aid of the Liscannor works.* 2 Edw. VII., c. 24.

74. Owing to the poverty of the maritime districts in the West of Ireland and the high rates which prevail it is not easy for the County Councils to undertake the construction of new marine works. In addition to this difficulty of finding funds for building or completing the few large harbours, and the many small piers that seem to be necessary, owing to the peculiar nature of the Irish fisheries, a further difficulty arises as regards maintenance, which in the case of marine works is often heavy. Some of the Councils have been unwilling to take over from the Board existing works, as they are empowered to do by the 18th Section of the Local Government (Ireland) Act, 1898, as they are generally reluctant to add to the rates by incurring liability for maintenance of works, at any rate, where they had no voice in their construction and where, as in some cases, they regard them as of little value. As regards new marine works, the Board generally make a considerable contribution, but try to get the work constructed by or under contract with the local authority, as this devolves upon that authority the duty of maintenance.

75. Over the greater part of the west coast, north of the mouth of the Shannon, little less than the creation of the fishing industry was the task awaiting the Board, and it was here that the chief opportunity for development was found. Among the methods of encouragement adopted by the Board, in addition to the construction of marine works, were the making of loans for the purchase of boats, nets and fishing gear, the supplying of boats on the share system; instruction in fishing and in the care of nets; the promotion of boat-building and barrel-making; and the development of marketing facilities. To aid the development of new fishing centres, the Board frequently acted as buyers and curers at different places until private enterprise came into play.

* The amount of the grant expended to 29th February, 1908, was £33,824, in addition to which a sum of £10,977 has been hypothecated. The amount contributed by the Board has been £2,720, by the Department £1,900, and by local authorities £810, whilst further contributions have been promised.

VIII.—*Continued.* Fisheries.

Thus at one time the Board bought mackerel, herring, cod, and ling all along the Donegal, Mayo, and Galway coast, and cured the fish or despatched it fresh. Now they have withdrawn from this work, and it is stated that there are sixty private firms of fish curers on the Donegal coast alone. Undoubtedly great success has been achieved in Donegal, where a most valuable herring fishery has been established, of which Downings Bay and Burtonport are the chief centres. In 1893 when the autumn and winter herring fishery had been started, the value of the catch was estimated at £1,000, and twelve years later the value had arisen to £40,000, whilst £10,000 was paid for curing and carting, as against £200 in the earlier year. Much of the fish caught is cured, as the prices in foreign markets are better than at home, and as the transit facilities for a fresh fish trade are insufficient in many cases. Nearly all the cured herrings are sent to Germany, Russia, and America, and the Donegal herrings generally obtain the highest price in the foreign markets. The efforts of the Board off the Mayo and Galway coast have not been so successful, and their attempts to establish a mackerel trade at Blacksod Point failed. The Cleggan and Aran Isles fisheries have both been fairly successful, but the efforts to develop the industry in South Connemara have not succeeded.

76. As regards the south-west, there was not so much need for the help of the Board, beyond marine works and loans for boats. The supply of fish during the past sixteen years has varied a good deal, but the fluctuations in the value of the autumn mackerel fishery have depended mostly upon the variations of the American market. There seems, however, to be little doubt that uniformly good curing would have greatly increased the value. It may be noted that whilst big boats do most of the spring mackerel fishing, the autumn fishing has largely to be done by small boats, as the fish lie close to the shore, hence the great number of curing stations that have come into existence, wherever facilities for landing and keeping boats have been provided.

77. It was stated in evidence that the amounts paid for fish and to fishermen from fisheries developed by the Board on the coasts between Galway and North Donegal from 1891 was £353,601, and that during the year 1905 the following sums were paid for fish in the congested districts :—

Spring mackerel fishery, ...	£29,315
Autumn mackerel fishery, . .	£61,101
Summer herring fishery, . .	£14,075
Autumn and winter herring fishery, .	£58,635

78. The Board's expenditure on fisheries may be considered under two heads. The first is instruction in fishing, boat building, net mending, barrel-making, and fish curing, which involved a net expenditure of over £53,000. The second includes the various fishery schemes, such as the supplying of boats, nets and gear, the developing of markets and fishing grounds, curing, &c., which involved a net expenditure of over £60,000. The total net expenditure on the development of fishing has thus been over £113,000 in addition to the £64,422 spent on marine works. The cost of administration is estimated to have been about £70,000. The Board also helped by loans made partly out of the capital funds at their disposal, and partly out of their income, the total amount advanced being £97,914 of which £2,787 has been written off, and the amount outstanding is £28,657. Most of the arrears and bad debts have been incurred in respect of large boats and mainly by Galway fishermen, where the mackerel fishery in recent years has not been very successful. It is worth noting that there have been 56 large boats and 2,723 small boats built in the congested districts at a cost of over £37,000. Most of the original cost of the Board's steamer the *Granuaile* and of the cost of her up-keep should be debited to fishing purposes, though she seems to have been of great assistance both for inspection, and for other schemes of the Board's, *e.g.*, carrying cargoes in connection with live stock, industrial and estates works.

XI., p. 53.

IX.—Industries.

79. The Board were given full powers to aid the development of industries, but the prospect before them in this respect was not encouraging. It was recognised from an early stage that developing industries was the most difficult part of their work, both as regards the selection of fields of work and the methods of assistance, and it could hardly be expected that great permanent results would be achieved. The natural difficulties, which were great, will be considered later; and the Board felt constrained to avoid, where possible, direct ownership or management of industrial enterprises. Leaving out of the question agriculture and fishing and their subsidiary industries, such as boat building, barrel making, &c., there was, when the Board came into existence, practically no industrial employment for men in the congested districts except quarrying and kelp making. The other existing industries afforded employment almost exclusively to women, being of the cottage industry class, *e.g.*, embroidery, the making of shirts and underclothing (both by sewing machines and by hand sewing), hand knitting, hand carding, spinning wool and weaving home-spuns. The home-spun woollen industry was the most important and gave considerable employment.

See paragraphs 269–70.

80. What the Board have done may briefly be summarised. They assisted the Foxford Woollen Mills, which were started by the Sisters of Charity about the time of the creation of the Board, with a loan of £7,000 repayable in 18 years, of which over £5,700 has been repaid. They also built at a cost of nearly £1,200 a mill race in connection with the factory, and gave subsidies during the earlier years, amounting to over £8,000, in the shape of capitation grants for the training of workers. During the last five years the number of hands employed has averaged over 100, and the annual amount of wages paid over £5,000. These woollen mills are the most encouraging instance, in the congested districts, of industrial development on a large scale, either by the Board or by private individuals, especially as the factory was started in a district where the prospects were anything but promising, except that the population was not so scattered as in some areas. The Board have also given capitation grants amounting to over £4,000 and a loan of £3,000 to the Ballaghadereen Hosiery Factory, which had been started by the same Nuns.

XI., p. 54.

81. The other factory development in which the Board have assisted was the establishment by Messrs. Morton and Company, of Darvel, Ayrshire, in Killybegs, Kilcar, Crolly and Annagry, in County Donegal, of four factories for making hand-tufted carpets. The Board made payments amounting to a little over £3,000 in aid of these factories, which formed about 25 per cent. of the cost of the buildings, and they retain certain rights over the Crolly and Annagry factories. The wages paid are not high, but they form an important item in the revenue of a poor district, and it must be remembered that the products of cheap Eastern labour largely enter into competition with the carpets made in these factories.

82. The Board have from time to time given assistance to the South Donegal home-spun weaving industry. They employed an expert to measure and grade webs; gave premiums and made loans for the purchase of improved looms and spinning wheels, besides giving instruction in weaving and dyeing. The knitting, weaving, and sewing industries have been helped, in other districts, by loans for the purchase of looms and machines, and by practical instruction. Up to 1897 when the Board secured the services of Mr. W. J. D. Walker most of its assistance to the home-spun industry was given through the Royal Irish Industries Association, but since then they have given assistance direct.

83. The Board's chief success in developing cottage industries has been in connection with lace and crochet. Owing to the lack of transit facilities in the districts which were most in need of assistance, this industry was specially suitable, as both the raw material and the finished product could be sent by parcels post. Owing to the nature of the industry, a minimum expenditure

IX.—*Continued.* Industries.

on the carriage of the material is associated with a maximum amount of employment on the article produced. Moreover, comparatively little capital outlay was required, the assistance afforded in connection with these classes being largely in the direction of technical or rather industrial instruction. Under their scheme of industrial classes, the Board build or rent a suitable class room in a poor district, pay the salary of the instructress and help in the marketing of the lace. There are now over 70 such classes in existence, from which the value of the output during the last couple of years has averaged over £20,000 per annum, or about one-fifth of the total value of all the lace produced in Ireland. The money distributed for work done at the most important schools, Pullathomas, Derrypark, Foxpoint and Banada has during the last few years amounted to as much as £1,800 per annum per class. In many districts lace-making is most helpful, as the money earned forms a large proportion of the resources of the people. The industry, however, being dependent on the demands of fashion, is not capable of anything like indefinite extension, and is subject to limitations and disadvantages which will be discussed when possible future industrial developments are considered. It was the intention of the Board to make a small deduction from the receipts for the lace sold, in order to pay part of the cost of the instruction and maintenance, but this project has, for the present, been postponed. Within the last few years a new branch of the lace industry, curtain-making, has been started in Connemara by Messrs. Morton and Co. in conjunction with the Board.

See paragraphs 274–7.

84. In November, 1898, the Board started domestic training classes to assist girls in West Donegal, who went each year to the hiring fairs in East Donegal seeking temporary domestic service, to obtain a better class of employment. As the circumstances under which they lived at home gave them no opportunity of learning the ordinary work of domestic service, they were quite untrained, and were fit to undertake only rough work commanding low wages. As these classes proved very successful, they were subsequently extended to other parts of the congested districts, and their object now is as much to teach the pupils to keep their own homes properly, as to fit them for domestic service. Six teachers are now employed by the Board, and the usual course for each class takes four months, during which time a complete course of instruction in cooking, laundry, and domestic economy is given. In this connection it may be remarked that these classes, even more than the lace classes (which also enable the girls to make money), seem to have a decidedly elevating effect upon the home life of the pupils.

85. It will be seen that all the existing industries were mainly for women and so far as can be gathered from the reports of the Board and the evidence of the witnesses, though several attempts were made by the Board, little has been accomplished in the direction of developing quarrying and kelp making. These industries were, with the exception, to some extent, of the woollen industry, the only existing industries in which men were employed, and, apart from those dependent on developments in the utilisation of peat, they are almost the only industries for which the congested districts seem to have any advantage in the way of the raw material. There were however special reasons which hindered the Board from attempting to give any direct aid towards the development of quarrying and kelp-making.

86. The net expenditure by the Board up to the 31st March, 1907, on industries, and technical instruction, other than that connected with agriculture and fisheries, amounted to £64,302, of which about two-thirds were expended on instruction schemes, and one-third on grants to industrial undertakings, &c. About £5,000 has also been expended on domestic economy classes. The cost of administration has been about £27,000. In addition to these sums, the Board made loans for industrial purposes amounting to £14,693, of which about two-thirds have been repaid, £800 has been converted from a loan into a free grant, and £131 written off.

XI., p. 54

X.—Parish Committees.

87. In October, 1897, the Board determined to try, as an experiment, whether the occupiers of land in certain inland congested districts could success-

X.—*Continued.* Parish Committees.

fully be encouraged to make useful and permanent improvement in their holdings, buildings, and surroundings, by means of small grants in aid, administered through local committees. A beginning was made in Swinford Union, where the Board up to that date had found it difficult to carry out any measures likely to improve the resources, comfort, and general condition of the inhabitants. The experiment proved successful, and led to the establishment on a larger scale of what are known as Parish Committees. The persons eligible to be *ex-officio* members of the Committee are the clergymen of all denominations, the poor law guardians for each electoral division in the parish, and the resident landlords or their agents; six additional members are elected by the ratepayers in the parish. Shopkeepers and members of their families are not eligible to act on the Committees. A grant, which generally varies from £50 to £100, is made to the Committee, and they invite occupiers of holdings of which the valuation does not exceed £7, to send in particulars of suitable works, in connection with their holdings, which they are willing to undertake provided they get a small grant in aid; these applications are forwarded to the Board's office, where they are examined, and, if they are considered desirable, approved. The Secretary of the Parish Committee then informs the most deserving applicants that certain grants will be made, provided that the work is carried out in a satisfactory manner, and payment is made only when the work has actually been done. In addition to this local check, the working of each Committee is carefully supervised from headquarters. In Donegal, where a somewhat different scheme has been adopted, there are no elected members, their place being taken by the magistrates resident in the parish. In that county, as an alternative to the system of grants in aid, small prizes are in many cases given to those occupiers who are considered to have done the best work.

88. The principal works carried out through the Committees are the erection and improvement of dwelling-houses, out-offices for cattle, and the making or improvement of drains, fences, accommodation roads, and reclamation works. It is estimated that the value of the work thus effected is generally four or five times the amount of the grant, which is mainly used for purchasing the materials necessary. The net amount thus expended up to the 31st March, 1907, was £52,054, of which about one-half was expended in Mayo, as it was only in more recent years that Parish Committees have been started, on anything like a large scale, in the other counties. There are 207 parishes wholly or mainly in the congested districts, of which 162 now have parish committees.

89. The following Statement gives some details of the work carried out under these Committees during the year ended 31st March, 1907:—

	Estimated value of Work done.	Amount of Grants in Aid or Prizes.	NATURE OF WORK DONE.						
			Erection of New Houses.	Improvement of existing Houses.	Erection of New Out-Offices.	Improvement of existing Out-Offices.	Drainage and Fencing Work.	Road Work.	Reclamation and other Works.
	£	£							
Donegal,	15,252	1,845	115	769	373	109	228	50	210
Other Counties,	31,812	7,294	190	1,465	1,193	395	153	141	21
	£47,064	£9,139	305	2,234	1,566	504	381	191	231

The cost of supervision and inspection seems to vary from 5 per cent. to 25 per cent. of the grants or prizes, and to average about 10 per cent.

90. A condition precedent to the giving of any grants or prizes is the removal of the manure heap from the vicinity of the house, and the turning of cattle out of the dwelling-houses. It has been pointed out that a good deal of the work done is of a sanitary nature, which should be enforced by the sanitary officers, who are paid out of public funds for seeing that this work is done, but it has been contended that it was hard to enforce some of the public health laws in the poorest parts of Ireland, owing to the poverty of the people. This

X.—*Continued.* Parish Committees.

system of grants has been criticised as a system of paying people, through parish doles, for what they should obviously do of their own accord. It may, however, be fairly urged that this criticism does not take sufficient account of the miserable condition under which so many of the inhabitants of the congested districts have lived in the past, and under which many still live, and of the effect past wretchedness has had in stereotyping habits, that would never have been formed under happier conditions. A stimulus and an encouragement that would be unnecessary, and even objectionable, in more favoured districts can be justified in many parts of the West of Ireland. We are of opinion, however, that, when the necessary help has been given to enable sanitary regulations to be carried out, the public health laws should be henceforth enforced.

91. The Board have been so careful to see that the grants given should be barely sufficient to act as a stimulus to the carrying out of the work, that some of the poorest inhabitants have been unable to take advantage of the offers of the Parish Committees owing to the lack of means to start the works. The Board seem to have exercised careful supervision so as to prevent the grants degenerating into parish doles, and it seems to be their expectation that the system of giving grants in cash, on condition that certain work is done, will, when the need for great reforms in the condition of the homesteads becomes less urgent, merge into one of prizes for the best kept houses, offices, or gardens, a system not unknown outside the West of Ireland nor, indeed, in other countries.

XI.—Agricultural Banks.

92. One of the chief difficulties, in the way of agricultural development in the congested districts, is the lack of working capital, from which small farmers suffer. It is for this reason that the Board have co-operated with the Irish Agricultural Organisation Society in founding co-operative credit associations, commonly called Raiffeisen banks. What Raiffeisen did was to join together a number of small farmers, whose individual credit was bad, and by their union create a greater security than the individual farmers could offer. They borrow on their joint and several liability a large sum of money at a low rate of interest, which they lend in varying sums to such of their number as require a loan. All the affairs of the bank are managed by a committee elected by the members. No loan is made except to a member who can be trusted to employ it reproductively, and who is obliged to produce one or two sureties. Their funds are obtained on loan from joint-stock banks and from local depositors, and in the poorer districts the Board have lent to individual societies amounts varying from £30 to £200, upon which the bank pays interest at the rate of from 2½ to 3½ per cent. These small loans serve as a nucleus around which other sums—obtained from joint stock banks or local depositors—gather by degrees, until sufficient capital is acquired. The Raiffeisen banks thus aided, issue numerous small loans to their members—the very poor—who could not obtain credit elsewhere. The profit to the individual borrowers is generally very considerable, and, so far, practically no losses have been incurred by the banks—indeed in nearly every case a small profit has been made and carried to the reserve fund.

93. Under the arrangements made with the Treasury in 1899–1900 for borrowing money from the local loans fund it was provided that the Board should be able to borrow two-thirds of any capital required for loans up to a limit of £100,000. Of this amount £40,000 was set aside for loans to tenants (including loans to agricultural banks). As more money was subsequently required, for estate improvements, than was then available, three-quarters of the sum available for loans to tenants, &c., was diverted to estates. The £10,000 left for loans to tenants, &c., has so far proved sufficient, as the Board in February, 1904, decided to limit the loans to banks to a total of £6,000, but one result of that decision has been that, for several years, very few new banks have been organised. The circumstances of each bank are watched, and as soon as local funds are raised from joint stock banks or private individuals, the Board withdraw part or the whole of

their loan, and transfer the money to another bank, where it is more required, or where no loan has yet been made by them. It is hoped by the Board that in time the banks will accumulate reserve funds which will make them more independent of external assistance. The advantage that, in the Board's opinion, would thus be attained, is one of very great importance to the healthy working of these societies, namely, the growth of a sense of greater independence and self-help, when the members recognise that they possess a property of their own in the bank, which it is their interest to preserve and strengthen, instead of feeling that they are borrowing from a quasi-charitable fund. This building up of a reserve can only be done by avoiding bad debts, and by the members agreeing to pay to the banks higher interest than the rate which the bank is paying. The usual charge is at the rate of one penny per pound for each month. As the members usually make a large percentage of profit on their loan transactions, they can, it is said, afford to pay higher interest. In the present condition of the districts concerned, this somewhat rigid application of self-help must, for the present, be to some extent a counsel of perfection.

XI.—*Continued* Agricultural Banks.

94. At 31st March, 1907, there were in the congested districts 65 banks in working order, and 32 which had not commenced operations, or which had been closed. The net amount lent by the Board was £6,000; £3,000 had been borrowed from joint-stock banks, and local deposits amounted to £7,000. There were 5,756 members to whom 4,169 loans had been made amounting to £17,200. In three cases there had been a slight loss, the total loss being less than £6, whilst the reserve fund amounted to £800. In the five years 1900-1904, the Board made occasional grants to the Irish Agricultural Organisation Society to recoup the expenses of organising banks and auditing accounts in the congested districts. About £1,660 was paid in that period, or an average of £330 a year. From 1904 to 1906, the Board recouped the Society for the salary and expenses of one organiser, who spent all his time in the congested districts. The distances to be travelled made this an uneconomical arrangement. Since February, 1907, the Board have agreed to pay the Society £350 a year regularly, the work to be done by any officers to whom the Society may assign the work. Full details as to the financial working of each bank is contained in each annual report of the Board.

XII.—Marine and Inland Works.

95. An important part of the Board's work has been the construction of piers, boat slips, roads, bridges, and other miscellaneous works. On these there has been a net expenditure of £133,047 up to the 31st March, 1907, of which £50,000 was provided out of the two capital funds at the disposal of the Board, namely, the Irish Reproductive Loan Fund and the Sea and Coast Fisheries Fund, the balance coming out of the Board's income. Of the total amount spent, about half has been expended on maritime works, to which reference has already been made, the inland works costing £68,625. As has already been pointed out in connection with the piers and harbours, most of these works are of the nature that should be undertaken by the local authority, but, owing to the poverty of the districts and the high rates, it is difficult to get such works carried out without a large contribution from the Board, and it is seldom easy and often very difficult to get the local authority to undertake their maintenance. The Board also gave subsidies to various coasting steamer services, and the portion of this expenditure not chargeable to fishery development was £7,399.

XI. p. 53.

See paragraph 74.

XIII.—Future Development of Congested Districts.

96. We may conclude our review of the operations of the Board in the past, and preface our recommendations for the future, by expressing our opinion that, having regard to the limitations both of funds and powers under which the Board worked, and to the fact that their work was of necessity during the early years experimental, they proceeded on judicious lines: and that we believe in the extension and development of the main features of the work they

XIII.—*Continued* Future Development of Congested Districts.

have recently done, lies the best hope of permanently improving the condition of the congested and other exceptionally poor districts. We realise the force of the objections that can be urged against paternalism amongst normal communities, but we believe that a certain amount of paternalism is absolutely necessary for large parts of the West of Ireland. We are convinced that if the past efforts of the Board are not to be deprived of full fruition, and if the districts are not to remain in their present unhappy condition, vigorous efforts must be made to continue and extend the work of the Board, mainly, along the lines which they adopted. The Board have never made any use of their powers to assist emigration, and though resort to such a remedy might, in many cases, be preferable to a perpetuation of the existing conditions, we do not consider that such a course furnishes a practicable alternative to our proposal. While we consider it of the utmost importance that no effort should be spared to develop the possibilities of fishing along the coast, and while we regard it as highly desirable to promote industries where possible, the remedy that seems to us to contain, to the greatest extent, the necessary element of permanence is the re-settlement and enlargement of the majority of the small holdings. This is, in general, a condition precedent to any marked agricultural development, which is all-important in these districts where the great majority of the inhabitants must depend mainly on the land. Such a re-settlement will involve the acquisition of large areas of grass land and an extensive scheme of migration. The migration already effected has been on too small a scale, and is of too recent a date, to justify us in drawing any very definite conclusions as to the general success of future migrants, but the results so far have been most encouraging. Before considering such a remedy in detail, two questions require consideration :—

(1.) What body should carry out the work, and

(2.) " What areas (if any) outside the districts now scheduled as congested require to be dealt with as congested."

XIV.—Question of Continuance of Board.

97. The question has been raised during our deliberations whether the Board should continue to carry out the work, which it is generally recognised must be done by some public body, of improving the condition of the people in the poor districts in the West of Ireland. It was pointed out that the Board is not, from an administrative point of view, an ideal body for carrying out this work. They meet generally but once a month, and sit then for three days at the most. Such a procedure is inconsistent with continuous day-to-day administration. It was suggested that the continuance of the Board would perpetuate dual administration and make for administrative waste. When the Board was created in 1891 there was no other body charged with similar functions over any part of Ireland. It is true that Inspectors of Fisheries were in existence before, and after, the creation of the Board, but they had no power of developing the fisheries except by making loans for boats and gear (in conjunction with the Board of Works), and so there was no clashing with the Congested Districts Board. In 1900 a department of Government came into existence, charged with the duty of carrying out the work of developing agriculture, fisheries, and technical instruction in the non-scheduled portions of Ireland. Between 1900 and 1904, there were two bodies—the Department and the Board—carrying out agricultural development in areas that not only adjoined but were intermixed, and some of the difficulties and administrative waste caused by this system have been already adverted to. Since 1904, these difficulties have been obviated by the transfer of the work of agricultural development, in the congested districts, to the Department. There seems to have been little or no clashing between the Board and the Department as regards other work, but in order to avoid any waste caused by dual administration it was suggested that a similar transfer of the fishery work and the work of technical instruction should now be effected.

See paragraphs 62–7.

98. As regards what we consider much the most important work of the Board, that of land purchase and re-settlement, there was no competing

XIV.—*Continued.* Question of Continuance of Board.

authority in Ireland until the end of 1903, when the Estates Commissioners were established, and given powers somewhat similar to those possessed by the Board, as regards land. A fact that may be significant, and which is at any rate curious, may be worth noting, namely, that the two years in which the bodies that may be regarded as competing with the Board—the Department of Agriculture and Technical Instruction and the Estates Commissioners—were created, were the two occasions on which Parliament decided to give the Board an increase in their income. There can be no doubt that this duplication of authorities has been attended with some evils as regards the land work. The Estates Commissioners can buy and re-sell land not only in the non-scheduled portions of the congested districts, but also in the scheduled portions. It is quite clear that the existence of two public bodies, buying and re-selling land in the same area or adjoining districts, rendered it inevitable that comparisons would be drawn as to the price at which they acquired land, and as to the rapidity and efficiency of the two bodies. This was not conducive to smooth working and was liable to cause friction. Moreover the division of control and responsibility prevented either body from mapping out a comprehensive scheme of re-settlement, for neither body could be sure that land that was required for their scheme, would not be acquired by the other body.

99. The simplest way, on paper, out of these difficulties would be to merge one body in the other. We have not attached importance to the comparison that has been drawn as to the respective efficiency of the Board and the Estates Commissioners, for their work is not strictly comparable, as the Board have had to deal with a much more depressed population which required special treatment. Hardly anyone has seriously suggested that it was desirable or possible to make the Board the administrators of the Land Purchase Acts, or of the work of agricultural, fishery and industrial development all over Ireland. Hence the cessation of dual administration would involve the abolition of the Board, and the transfer of its work to the Estates Commissioners and the Department of Agriculture and Technical Instruction.

100. On the other hand it has been urged, and we think with great force, that much of the success of the Congested Districts Board, who were given a very difficult task, has been due to the fact that they did not form an ordinary Government department but were an independent body of Irishmen, who, as regards their work on the Board, were generally regarded as being as free from officialism as from party politics. Rightly or wrongly it seems to be felt by many that a Government department in Ireland, not being responsible to some Irish body but only to the Imperial Parliament, is not readily responsive to Irish public opinion, and does not command the confidence, which seems to be accorded to the Board. Whatever may be the truth of this argument, and whatever it was in the Board, whether their independence of Government or their *personnel*, that commanded confidence, it is obvious that functions such as those which have been discharged by the Board, functions which depend for their success on the consent and active co-operation of the people, might, under existing conditions, suffer from the substitution, for the Board, of a department, no matter how efficient. If no Board had been in existence, and the question merely was what would be the most efficient body for carrying out the work to be done in the West of Ireland, it might be considered desirable to entrust it to existing departments of Government. With things as they are in Ireland, we are strongly of opinion that it would gravely imperil the carrying out of the work, that has to be done, to transfer to any department of Government the functions of the Congested Districts Board, so long as the constitution of Irish Government remains as it is.

101. Accordingly we are clearly of opinion that the Board should be continued, though we are equally of opinion that its constitution must be considerably modified. The exact changes which we recommend will be pointed out at a later stage of the Report, when a full statement has been made of the work which we think should be done by the Board. It is sufficient to state here, as regards some of the arguments advanced against the continuance of the Board, that continuous day-to-day administration may

XIV.—*Continued.* Question of Continuance of Board.

be secured by having on the Board certain paid members or commissioners. We consider that the addition of a certain number of elected members will increase and extend the sense of responsibility for the successful working of the Board, which we desire to see more common among those who live in the area over which the Board is to operate. The evils of dual administration and overlapping may, we think, be avoided to a large extent by drawing a more precise line of demarcation between the technical instruction to be given by the Board and that to be given by the Department of Agriculture and Technical Instruction, and by giving the Board exclusive powers for purchasing and re-settling land over a certain area, within which no land should be sold under the Purchase Acts, except to the Board, unless a certificate is given by the Board that the circumstances of the estate justify a sale direct to the occupying tenants.

XV.—Future Area of Board.

102. As regards the question of what additional areas require to be dealt with as congested, we have already considered some of the defects of the present definition of a congested district. It is quite clear that there are areas outside the scheduled electoral divisions, both in the nine counties part of which are scheduled, and in some of the other counties, which stand in as much need of assistance as the greater part of the Board's present area, and there are parts of the congested districts in which the need for exceptional treatment is not marked. The Board have, of course, been unable to deal with the former cases, but as regards the latter, they have been able to differentiate by limiting the amount of work done to the requirements of the districts. Many alternative definitions have been suggested, but most of them were in part subject to the objections raised against the present definition, and nearly all would increase the scattered nature of the districts, which is already so marked as to cause inconvenience. Some of the changes suggested would notably increase it, *e.g.* the proposal that instead of electoral divisions—of which there are 3,652 in Ireland—townlands—of which there are 60,462—or even part of a townland, should be made the unit. Connected with changes of this sort is the suggestion that the power of the Lord Lieutenant to schedule districts should be revived, or that the Board might be given absolute discretion to schedule any district. Proposals have on the other hand been made that the unit of congestion should be increased to a rural district—there are 213 rural districts in Ireland—or to a county, and that the area over which the Board is to operate should be thus rounded off.

See paragraph 7.

See map facing p. 116.

103. One important advantage to be gained by scheduling the whole of a county is simplification of administration, especially the administration of agricultural development. Considerable difficulty has been found in working side by side a general county scheme, and special schemes, confined to the scheduled districts. Another advantage of scheduling the whole of certain counties would be the possible diminution of the present opposition to migration. Undoubtedly the present somewhat arbitrary distinction that is drawn between the scheduled and the non-scheduled portions of a county increases the difficulty of migrating to grass lands in the non-scheduled portions of, say, Roscommon and Galway, the people who live in the scheduled portions of these counties. The removal of these artificial boundaries and the knowledge that the Board are concerned with the whole of certain counties might to some extent diminish parochial prejudice.

104. These two considerations seem so important, and the difficulty of framing any satisfactory definition or test so great, that we are of opinion that the present definition of congestion and the test for scheduling should be abolished, and that (with one exception) entire counties, as distinguished from selected districts of such counties, should be placed under the Board; and we are clearly of opinion that each county in Connaught, and Donegal and Kerry should be so treated. A considerable portion of each of these counties is at present scheduled, and it does not seem practical, even

if it were desirable, to suggest that any of them should be withdrawn from the Board's jurisdiction, but a difficulty arises as regards the other two counties containing divisions scheduled as congested, namely, Clare and Cork.

XV.—*Continued.* Future Area of Board.

105. The case of Clare is peculiar. In 1891 there were several electoral divisions in Clare under the 30*s.* limit, but as they contained less than one-fifth of the population of the entire county, no electoral division in Clare was scheduled. As a result of the re-adjustment of county boundaries under the Local Government Act of 1898, the scheduled electoral division of Mountshannon—formerly in Galway and originally scheduled through a clerical error—was transferred to Clare, and a somewhat anomalous situation was created. There was no power to remove Mountshannon from the schedule, and whilst it was no longer part of the "Congested Districts County of Galway" it was very doubtful whether it constituted the "Congested Districts County of Clare." The Board, as a matter of fact, never spent any money in Mountshannon. In view of the fact that it is very desirable to keep the area of the Board as small as possible, consistent with our recommendations that they should be the body entrusted with the main work of relieving congestion, and that the whole of a county should be taken as the unit of congestion, it is with considerable hesitation that we have decided to recommend the inclusion of Clare. There can be no doubt that the condition of the greater part of Clare is far better than that of the areas at present under the Board, in fact it is better than the average condition of the non-scheduled portions of Connaught, Donegal and Kerry. It is, however, after these counties, the poorest in Ireland with the exception of Cavan, judged by the ratio between valuation and population. An argument of perhaps some importance in favour of scheduling Clare is that otherwise it would be the only non-scheduled county in the west, and that its inclusion will bring the whole of the sea-board from the Foyle to Skibbereen under the jurisdiction of the Board. Moreover, there is a considerable amount of grass land in the county, which might be utilised for the relief of poor districts in other parts of the Board's area. On the whole the balance of advantage seems to us to be in favour of its inclusion.

106. Cork presents special features. All the scheduled districts are in the West Riding, the two Ridings in Cork having been treated as counties for the purpose of scheduling. Four rural districts—Bantry, Castletown, Schull, and Skibbereen—are greatly congested, especially Castletown, the whole of which is scheduled. There are only four electoral divisions scheduled outside these four rural districts. Three of them are in the comparatively rich rural district of Macroom; two of these are now well over 30*s.* valuation per head of population, whilst the third is only a penny below. The remaining scheduled electoral division—Courtmacsherry—is in the rural district of Clonakilty, and is over thirty miles from the nearest congested district. A suggestion was made that the whole of the West Riding, including Macroom and Clonakilty, should be scheduled, but there are three objections. The greater part of the West Riding is comparatively rich, and does not require treatment by the Board; *e.g.*, the rural districts of Clonakilty, Dunmanway, and those parts of Bandon, Kinsale, Macroom, and Millstreet, which are in the West Riding. In the next place the addition of the whole of the West Riding would largely increase the territory of the Board. Finally, scheduling the whole of the West Riding would confer no administrative advantage similar to that gained by scheduling an entire county, since the Ridings in Cork, unlike those in Tipperary, are not administrative, but only baronial, divisions. Of the eighteen rural districts of Cork, six—Bantry, Castletown, Clonakilty, Dunmanway, Skibbereen, and Schull, are wholly situate in the West Riding: whilst Bandon, Kinsale, Macroom, and Millstreet are partly in one Riding and partly in another. The line of division, moreover, between the Ridings is not coterminus even with the boundary lines of electoral divisions; thus five divisions in Bandon and Millstreet are partly in one Riding and partly in the other. As it seems undesirable for many reasons that the whole of the County of Cork should be scheduled, and as it is desirable that the south-west portion—most of which is extremely poor—should have the advantage of treatment by the Board, we recommend that the whole of the four rural districts of Bantry, Castletown, Schull and

XV.—*Continued* Future Area of Board.

Skibbereen should be placed under the Board, and that the four electoral divisions which are not in these rural districts but are at present scheduled, namely, Cleanrath, Bealanageary, Slievereigh (in the rural district of Macroom), and Courtmacsherry (in the rural district of Clonakilty), should be removed from the Board's area. Of the 57 electoral divisions in the four rural districts recommended for inclusion in the Board's area 18 are under the 30*s.* limit and 29 are at present scheduled. The average valuation per head of population of each of the four rural districts mentioned is as follows :—

	£	*s.*	*d.*
Bantry	1	15	4
Castletown	1	2	2
Skibbereen	1	19	1
Schull	1	10	5

This would mean an addition to the eight counties, already recommended for inclusion, of an area which contains about one-fifth of the rural population and of the acreage, and one-tenth of the valuation of the rural districts of County Cork.

107. The following table shows the number of holdings, the population living on them, their total acreage and valuation, and also the total area, valuation and population in (1) the present scheduled districts, (2) the seven counties which we have no hesitation in recommending should be placed under the Board, (3) the four unions in Cork about which we are similarly agreed, (4) the County of Clare which, with some hesitation, we recommend should be included, (5) the totals for the districts referred to in the last three headings,* and (6) similar totals for the whole of Ireland :—

Area.	Number of Agricultural Holdings. 1.	Population Living on Holdings. 2.	Acreage of Holdings. 3.	Valuation of Holdings. 4.	Total Population. 5.	Total Acreage. 6.	Total Valuation. 7.
			Acres.	£		Acres.	£
(1.) Present Scheduled Areas.	84,954	461,247	2,986,681	523,188	505,723	3,626,381	577,043
(2.) Donegal, Connaught, Kerry,	157,195	835,274	5,700,301	1,792,438	986,380	6,761,400	2,077,646
(3.) Bantry, Castletown, Schull, Skibbereen,	7,368	46,932	316,705	84,369	60,073	352,491	101,118
(4.) Clare, ...	15,757	88,004	766,720	297,239	112,334	852,389	326,214
(5.) Total, ...	180,320	970,210	6,783,726	2,174,046	1,158,787	7,966,280	2,504,978
(6.) All Ireland,	490,301	2,664,204	18,739,644	10,061,667	4,458,772	20,832,745	15,536,768

108. Of the districts in Ireland which are extremely poor, but are not at present scheduled, those situate in counties, part of which are scheduled will, under the foregoing scheme, be dealt with by the Board; as regards the other poor districts situate in counties of which at present no portion is scheduled, there is no one county which contains a sufficient number of such districts to make it necessary for the whole of the county to be placed under the Board, and we do not think it desirable that the Board should deal with small isolated districts in different counties. At a later stage we shall make suggestions for the improvement of these poor outlying areas by a different machinery.

* Throughout the remainder of this Report, the term "the Board's new area," refers to the whole of Connaught, Donegal, Clare, Kerry, and the four rural districts of Bantry, Castletown, Schull, and Skibbereen.

XVI.—Size of Problem of raising Holdings to an Economic Standard.

109. Having considered the two preliminary questions of the agency by which the work of re-settling the West of Ireland should be carried out, and having indicated the area over which the new Board should operate, we may pass to the consideration of the treatment required. We have already stated our opinion that it is to the land that a great majority of the people in the West of Ireland must look for support, and that, as the greater portion of the holdings, there, are not large enough to support a man and his family according to any decent standard of comfort, the first thing that has to be done is to bring as many holdings as possible, up to the standard of what is known as an "economic holding." The term is not a happily chosen one, unrelated as it is either to the "economical" distribution of the land or to the doctrine of "economic rent"; it seems, however, to be consecrated by usage and its interpretation is not doubtful. The meaning that has been attached to it before the Commission is, a holding off the produce of which alone it is possible for the occupier and his family to live according to a standard of comfort, which, if not satisfactory, is at least fairly decent. Such a holding is marked off, on the one hand, from what has been called, by Sir Horace Plunkett, a "hyper-economic" holding, and, on the other, from a labourer's allotment, by two vital characteristics. It can be worked without hired labour by a family of average strength and efficiency, and, so worked, its produce, whether consumed or sold, suffices for the maintenance of the household without supplementary sources of income. A labourer's allotment, though it can be worked by the occupier or his family without hired labour, does not suffice for the sole support of the household; on the other hand, a larger farm, which would support an occupier with a higher standard of comfort, cannot be worked without the assistance of outside labour.

See paragraph 96.

See paragraph 9.

III., p. 380.

110. Different tests have been suggested for determining whether a holding is or is not economic, *e.g.*, whether it requires for its cultivation a horse or, in co-operation with another holding, the use of a plough and a team of horses, but classification by superficial area or by valuation has been more common. Opinions have naturally varied greatly as to what, is the size or value of such a holding. It may be interesting to note that, over sixty years ago, the question was considered in connection with the Devon Commission. The preponderance of opinion as to the size of an economic holding then seems to have varied from $6\frac{1}{4}$ to $10\frac{1}{2}$ acres, the variation depending more on the skill of the occupier than the quality of the land. It seems to have been generally accepted that on "ordinary" land, eight acres, fairly well improved and fairly well farmed, would be as safe a minimum average as could be fixed. The witnesses examined before the present Commission set the average much higher, but most of them agreed that acreage was an uncertain guide, and that valuation was to be preferred. Obviously it is impossible to dogmatise as to the minimum size, measured either by superficial area or valuation, of an economic holding. Quite apart from the varying nature of the relation, in different districts, between the valuation and the productivity of the land, it is evident that what is an economic holding for one family may not be for another, and the position may be reversed in ten years' time, as much depends on the economic efficiency of the family. Still, whilst it is quite clear that there must be variation, it seems safe to say that £10 is a fair average to take as the minimum valuation of an economic holding.

111. With this figure as a rough guide, it may be useful approximately to estimate the size of the land problem before the Board. In the congested districts there are 84,954 agricultural holdings, of which 74,413 do not exceed £10 valuation; the total valuation of these 74,413 holdings is £286,196, the average per holding being £3 17*s*. Therefore, land of which the poor law valuation is £457,934 would be required to bring up every holding in the congested districts to a standard of £10 valuation. If however, the figures are taken not for the congested districts but for the whole of the Board's new area we find that the total number of holdings is 180,320, of which 131,316, or over two-thirds, do not exceed £10 valuation. The total

XI., p. 100.
XI., p. 101.

XI., p. 102.

XVI.—*continued.* Size of Problem of raising Holdings to an Economic Standard.

valuation of these small holdings is £571,918, the average valuation per holding being £4 7*s*. These figures are those of the Census of 1901. Since then the number of small holdings has decreased and the number of larger ones increased as a result of the operations of the Board, and of the Estates Commissioners under sections 6, 7, and 8 of the Act of 1903. Ignoring for the present the effect of these changes, which cannot be numerically estimated until the next Census, and which do not seriously affect our calculations, it appears that to bring every holding within the Board's new area up to a standard of £10 valuation, would require land the valuation of which is £741,242.

XI., p. 103.

112. There is no doubt that this is considerably more land than would be required to make economic (in the sense mentioned above) as many holdings as it would be desirable or possible to enlarge, even if there were no reluctance to migrate and no reluctance to receive migrants. Possible deductions from the maximum mentioned may be considered under six heads :—

(1.) Some holdings though under £10 valuation are in point of fact economic and do not require enlargement, *e.g.*, some holdings, notably in Donegal, of which the valuation is only £5 or £6, and which when the valuation was made consisted mainly of unreclaimed land, have now, owing to improvements, become economic. The deduction to be made under this head, in respect of holdings under £10 valuation but not needing enlargement, is quite uncertain and must be left to the discretion of the Board and its officials.

(2.) A large number of holdings have been bought under the various Land Purchase Acts by the tenants. Including holdings bought and re-sold by the Board and holdings bought by the Estates Commissioners, which have been or will be re-sold, the number bought to 31st December last in the Board's new area under all Purchase Acts is just over 39,000, exclusive of those in the four rural districts in Co. Cork, for which separate figures are not available. No information is forthcoming about their valuation, but, undoubtedly, the majority of these holdings are under £10 valuation. Over two out of every three holdings in the Board's new area are under £10 valuation: it is impossible to say whether there is the same proportion of small holdings among the 39,000 farms that have been sold but for the purpose of calculations this may be assumed. It is more difficult in general to re-settle tenant purchasers than tenants, and in any case tenant purchasers of small holdings are better off than a tenant holding a farm of the same valuation, for they have for a certain number of years been paying a terminable annuity which is less than the rent of a tenant on a corresponding holding, and they have for a varying period enjoyed all the advantages arising out of the "magic of property." Moreover, in many cases, the operations of the Board and the Estates Commissioners have improved the holdings whether the acreage and, consequently, the valuation, has been increased or not. Some of these holdings will, of course, both require and be capable of treatment by the Board, but if we assume, first, that over two-thirds of the farms sold were under £10 valuation in 1901, and secondly that the Board need not concern themselves with any of them, the number to be dealt with would be reduced by about 26,000, or about 20 per cent. of the total number of small holdings.

XI., p. 51.

(3) Agreements between landlords and tenants or landlords and the Estates Commissioners have been already entered into for the transfer of many holdings, though advances have not yet been made. As regards the Board's new area (exclusive of the four rural districts in Co. Cork for which no separate figures can be obtained), these cover, up to 31st December, 1907, about 28,000 holdings. Treating them in the same way as holdings for which advances have been made, it would appear that a further reduction of nearly 20,000 might be made. The question of how far the Board should be empowered to interfere in these cases, which may be described as "pending cases," will

XI., p. 51.

See paragraphs 210-6.

be discussed later. It is only necessary, here, to point out that some of these small holdings cannot be left unimproved, and that, as will be seen later, these holdings may be more easily dealt with than holdings where the sale is already complete. Of course a certain number of these pending cases will have been vested in the tenants before any legislation can be passed concerning the Board and consequently will pass into the foregoing category of completed cases.

XVI.—*continued.*
Size of Problem of raising Holdings to an Economic Standard.

(4.) A further allowance must be made in respect of holdings, the subject of purchase agreements, between 1st January, 1908, and the date of legislation concerning the Board. It is difficult to give anything like an exact estimate of the number of cases because the date of legislation is uncertain, and because, for various reasons, the number of purchase agreements lodged within the last few months shows a considerable increase over the average rate during the last couple of years.

(5.) There are certain districts where the land is so poor that no amount of migration and resettlement could make the holdings economic, *e.g.* parts of Erris and Connemara. To take a very extreme case : there may be 100 families living on 10,000 acres of land of which the total valuation is only £200. The average size of the holding would be 100 acres, valued at £2. To bring the holding up to a £10 standard would necessitate the migration of eighty families. This would be migration on a scale much larger than anything yet attempted, and, even if effected, the twenty families left behind would find it impossible to work their holdings, which, although valued at only £10, would extend over 500 acres. A deduction must also be made for holdings which cannot be enlarged because of the absolute refusal on the part of a sufficient number of surrounding occupiers to migrate. It is quite impossible to give any sort of approximate estimate as to what deductions should be made, in respect of the holdings affected by the considerations referred to in this paragraph.

(6.) Again, it must be borne in mind that a large number of holdings are not really agricultural ; their function is limited to the provision of a house, a potato patch, and perhaps the grazing of a cow. In some of these cases only would it be desirable to give the occupiers enlarged holdings.

(*a.*) Some are not really agriculturalists but fishermen. According to the Census in the Board's new area there are 5,756 fishermen. In addition to regular fishermen, many combine fishing with farming on a small scale. According to the Census returns there were in the area mentioned less than 500 occupiers of land who were also engaged in fishing, but, probably, there were many more who derived some assistance from fishing, but were not sufficiently constantly engaged in the operation to be classified ; and some occupiers derived considerable assistance from industries connected with fishing—*e.g.*, curing and carting. Moreover, the sons of many occupiers were engaged in fishing or in pursuits ancillary to fishing. Mr. Doran was inclined to the opinion that most of the population along the coast, in the area marked " A " on the map printed in connection with his evidence, which he estimated at about one-third of the total population of the congested districts, would look to fishing as their main support. It cannot be hoped that the fishing industry will, in the near future, support the larger proportion of these, but the partial dependence of a certain section of landholders on the fishing industry justifies considerable deductions being made from the number of holdings requiring enlargement, and from the amount of land required for this purpose.

XI., p. 105.

XI., p. 105.

I., Q. 2053, *et seq.*
I. Map facing p. 332.

(*b.*) Some landholders rely much more on other subsidiary sources of income than on their holdings—*i.e.*, kelp making, especially along parts of the coast of Donegal and Galway, the sale of turf, especially in certain parts of Connemara, weaving and carpet making,

XVI.—*continued.*
Size of Problem of raising Holdings to an Economic Standard.

especially in certain parts of Donegal, and lace making, especially in the Pullathomas and Foxpoint districts of Co. Mayo. It would probably be desirable to enlarge most of these holdings, as many of the secondary sources of income referred to are not of a very stable nature, and they are mentioned only because, in some cases, holdings in these districts do not stand so urgently in need of enlargement as in other districts where there are no subsidiary resources. Each of the industries mentioned presents special characteristics, which will be considered later, but it is important here to note that their permanent value as a source of income greatly varies, and that there is a danger in inducing the families of small farmers to devote to these industries time and labour essential to the proper working of a holding that is economic and the utilisation of its produce.

See paragraphs 264–9.

(*c.*) Many small holders rely largely upon remittances from America, but this aid is of course purely personal and temporary, and furnishes no reason against bringing the holdings of the recipients up to a proper standard.

(*d.*) Some of the holdings are really labourers' allotments rather than farms, and the occupiers rely less on the products of the holdings than upon the wages earned in some cases at home, but more generally in England and Scotland. It would be for the welfare of the west of Ireland to afford, by the provision of economic holdings, an opportunity of employing at home the labourer who now goes to Great Britain, but it seems undesirable to attempt to turn *bona-fide* labourers into small farmers. This raises a question of considerable importance; how far labourers' allotments should be increased in size? As a general rule, where there are no subsidiary industries other than that of field labour for hire, a holding should either be merely an allotment on which the labourer can utilise his own spare time and that of his family, or else an economic farm which will require the undivided attention of the occupier and such of his family as are fit to labour on the land. If a compromise is attempted the occupier will fall between two stools; his own holding will require his attention at the very time when there is a good demand for his labour, but it will not suffice to keep him occupied all the year round. It cannot be expected that the substitution of a large number of small holders, even though they go in largely for tillage, for a small number of large landholders, though concerned mainly with grazing, will increase to any considerable extent the permanent demand for hired labour. If the number of labourers' cottages is increased without a corresponding growth in the demand for labour within the Board's area, it may be attended with grave consequences, and lead to a renewal of the evils of congestion. It might be well worth consideration whether, within the more congested portions of the Board's area, the money now available under the Labourers' Act for the erection of labourers' cottages could not be better employed in repairing and improving existing dwelling-houses than in erecting new ones.

See paragraph 268, and also XI. p. 111.

113. It will be seen that while deductions have to be made from the maximum number of holdings to be enlarged, it is only in respect of classes 2 and 3 above that any sort of an estimate can be given. The maximum deductions in respect of these classes amount to 46,000 holdings, and it is clear that a considerable number of these holdings should be enlarged. On the other hand no deduction has been made under heads 2 and 3 in respect of the four rural districts in County Cork (because figures relating to land purchase operations in each rural district as distinct from each county are not available), and there are, moreover, deductions which must be made in respect of the holdings affected by 1, 4, 5, and 6 above. It seems probable that these deductions will far more than counterbalance the number of holdings which, though already affected by the Land Purchase Acts, will require enlargement, and that, therefore, more than 46,000 holdings should be deducted from the total

number not exceeding £10 valuation (131,316), in order to arrive at the actual number that will require enlargement. So many factors of the problem are unknown, and can be ascertained only by an inspection of each holding, that the widest power of discretion must be left to the Board and its inspectors as to what holdings should or should not be enlarged. We think, however, that the maximum size of the problem of the enlargement of holdings cannot be greater than that involved in dealing with 80,000 holdings, of which the rateable valuation is estimated to be £350,000, and that the land necessary for this purpose should not exceed land the valuation of which is £450,000.

XVI.—*continued.* Size of Problem of raising Holdings to an Economic Standard.

See paragraph 226.

XVII.—Compulsory powers required for the Relief of Congestion.

114. For the purpose of accomplishing this work it has been urged before the Commission that the Board should be given power, throughout the districts in which they are to operate, to acquire land by compulsion where voluntary negotiations fail. It has been suggested that this compulsory power should extend to every class of land which it is thought necessary for the Board to acquire, including tenanted land for re-sale to the occupiers, after treatment where necessary, untenanted land,* non-residential holdings and part of large residential farms, whether held by tenants or tenant purchasers. It was urged that they should also be given power to deal compulsorily with tenants of small residential holdings for the purpose of striping and re-settlement. It was pointed out that one unreasonable person, whether he be the landlord of tenanted holdings or the owner of untenanted land, or a tenant or tenant purchaser, could block the Board's scheme of re-settlement throughout an entire district. One thing is quite clear, that the Board cannot carry out their future schemes of re-settlement in the somewhat piece-meal manner which has been the unavoidable result of their present limitations. The Board should in future proceed, not as opportunity may chance to offer, but in accordance with a definite and systematic plan. Without compulsion it may be well that their efforts must continue sporadic. Under any scheme for the re-settlement of the whole of any large district, the inequalities in the condition of the occupiers on two neighbouring estates, one of which has been acquired by the Board and one of which has not been so acquired owing to the unwillingness of the owner to sell, would probably lead to serious trouble and friction such as arose on the de Freyne Estate some years ago after the purchase of the adjoining Dillon Estate.

115. The opinion has been expressed that, if the Board were given compulsory powers, there would be little need to exercise them, as the knowledge of their existence would discourage owners of land from taking up a *non-possumus* attitude. There seems to be much reason for thinking that unless the Board are given these powers, they will in some cases find difficulty in getting all the land necessary for the enlargement of holdings. It has been stated that a higher price would have to be paid for land taken compulsorily than for land acquired voluntarily, and that the existence of compulsory powers would increase the price of land generally, by setting a high standard. On the other hand, the absence of such powers might cause the Board to be met by some landowners with a demand for a quite unreasonable price, owing to the knowledge that their land was absolutely necessary for carrying out the Board's scheme of re-settlement.

116. After careful consideration we have come to the conclusion that compulsory powers are necessary in order to enable the Board to carry out a proper scheme of re-settlement in the west of Ireland, and accordingly we recommend the giving of these powers for the acquisition of any land mentioned in the next paragraph, subject to the exceptions set out. We recommend that in addition to the compulsory powers for the acquisition of estates from landlords, or farms from tenants or tenant purchasers, the Board should have compulsory powers to re-settle any estate they buy, even though this should involve the compulsory re-arrangement of holdings, and the allocation

See paragraphs 190–203.

See paragraph 199.

* By untenanted land is meant land in which no tenancy has been created, and where therefore the owner in fee is also the rated occupier. Such land does not cease to be untenanted by reason of being temporarily let.

XVII.—*Continued.*

Compulsory Powers required for the Relief of Congestion.

See paragraphs 152–97.

of turbary. We are also of opinion that compulsion should not be unilateral only, and that the Board should have the right of declaring any tenant the purchaser of his original holding (or of an enlarged or improved holding). The method in which compulsion should be exercised, the body that should fix the price, and the considerations that should govern the price are set out in a later portion of this Report; but we desire, at once, to emphasise the fact that our recommendation in favour of the granting of compulsory powers is entirely conditional upon our recommendations, in these particulars, being carried out.

117. It is recommended that the Board, in order to carry out their duty of relieving congestion, should be empowered to acquire, within their new area, by compulsion, where necessary, for the enlargement of small holdings, the following :—

(1). The landlord's interest in any tenanted property.

(2). Any untenanted land, *i.e.* land of which the rated occupier is also the owner in fee, provided it does not form part of any demesne, home-farm, garden or pleasure-ground, wood or plantation, or ground used for public recreation, and provided that all interference is avoided with the demesne and the amenity of residence of the owner of the land, or with any home-farm or with land immediately adjoining and customarily occupied with his residence. This treatment of demesnes and home farms, which are exempt under the Evicted Tenants Act, is analogous to the exemption of land, up to the valuation of £100, in occupation of tenants or tenant purchasers, which is suggested below.

(3). On any estate bought by the Board, the tenant's interest in any non-residential holding of any size, unless it is used *bona fide* in conjunction with a residential holding, held by a man whose chief occupation is farming. In this case the amount that may be taken by the Board should be only the excess above £100 valuation of all his holdings.

(4). On any estate bought by the Board, the tenant's interest in any residential holding or holdings, of which the total valuation exceeds £100, so far as such excess is concerned.

(5). The excess over £100 valuation of any residential holding or holdings bought under the Land Purchase Acts, and the whole of any non-residential holding similarly bought, unless it is worked *bona fide* in conjunction with a residential holding (no matter what may be the nature of the interest of the occupier in this holding) by a man whose chief occupation is farming. In such a case only the excess of the holdings above £100 valuation may be taken.

118. We are of opinion that non-residential land should be the first taken, and that no part of a large residential holding should be taken except in the last resort, especially where the holding is being farmed in a husbandlike manner, and is a source of employment to the people living in the neighbourhood. It seems fair that, where the Board desire to acquire part of an estate or holding, it should be in the power of the owner or occupier to insist upon their taking all or none. As regards the acquisition and re-arrangement of tenanted holdings, it may be pointed out that, under the existing Acts, the Board, when they have bought an estate, have power, though in a somewhat roundabout way, to take any holding on it from the occupier for the purpose of migration or the enlargement of holdings.

See paragraphs 199–205.

XVIII.—Amount of Land available for relief of Congestion.

119. Having estimated as approximately as was possible the amount of land that will be required for the enlargement of holdings within the Board's area, and having considered the power that should be given for acquiring land for this purpose, it remains to examine, in the terms of our reference, "what lands are most conveniently situated for the relief of congestion," and to estimate, as approximately as possible, the amount of land that can be made available for this purpose. Such land is commonly referred to as "grass land," which, however, is a somewhat indefinite description, as there is grass land on every holding large or small. What is usually referred to are those large

XVIII.—*Continued.*

Amount of Land available for Relief of Congestion.

racts of grass land in the west of Ireland, whether held by a landlord or a tenant or a tenant purchaser, which are used mainly, if not exclusively, for grazing either by the occupier, or by persons to whom they are let temporarily. These lands are sometimes spoken of as non-residential and sometimes as untenanted, but the terms are by no means synonymous or interchangeable. Their total area and valuation are not the same, and, so far as the area proposed for the Board is concerned, only about half (in area and valuation) of the non-residential land is untenanted, whilst nearly two-thirds in area and over a third in valuation of the untenanted land is residential.

120. A return of non-residential holdings above £25 valuation in the eight counties and the four unions in the West Riding of Cork, which it is recommended should be the Board's new area, was collected, under the supervision of the Board's Chief Land Inspector, by the Board's officials, the local rate collectors, and the Royal Irish Constabulary, and has been printed in the Appendix to the Eleventh Report.* It shows that the total valuation of all the non-residential holdings in this area (about 5,000 in number) is over £355,000, the area being over 800,000 acres. All this land cannot be regarded as available. Part of this non-residential land is worked *bona fide* in conunction with a demesne, home farm or a residential holding, and therefore is, to a certain extent, exempt from compulsory acquisition. Again, some of these non-residential holdings may consist of rich grazing land which would be unsuitable for breaking up (a point to which reference is made later on) or, what is more usual, of land, especially mountain land, so poor as to be of little use for the enlargement of holdings. On the other hand, it must be remembered that the return takes no account of the non-residential holdings under £25 valuation. It is impossible to gauge the exact amount of non-residential land which will be available, but undoubtedly it furnishes the chief hope for the relief of congestion.

XI., pp. 48-9.

XI., p. 49, col. 9.

See paragraph 144.

121. A return of untenanted land was prepared by the Commissioner of Valuation, and issued as a parliamentary paper nearly two years ago, showing the amount of untenanted land in each county in Ireland. The word "untenanted" does not mean unoccupied land, but merely land in which the owner in fee has not created a tenancy, and of which he is consequently the rated occupier. This land is either farmed by the owner in fee or let temporarily, *e.g.*, for eleven months. Strictly speaking, land belonging to tenant purchasers would come within the terms of this description, but such land was specially excluded from the return presented to Parliament. Particulars relating to the area over which it is recommended the Board should operate have been taken from the summary of the return put in by Mr. Finucane in connection with his evidence, and are printed in the Appendix to our Eleventh Report. They show that there are 1,082,517 acres of untenanted land with a total valuation of £270,321 within the area mentioned. Very large deductions must, however, be made from these figures in order to arrive at an approximate estimate of the untenanted land available, under compulsion, for the enlargement of holdings. These 1,000,000 acres valued at £270,000 are partly residential and partly non-residential land. The non-residential portion amounts to about 420,000 acres of which the valuation is over £170,000, and as this item has been already considered, only 660,000 acres valued at £100,000 are left for possible utilisation. Of this balance, but a small part can, however, be regarded as really available, since it includes a certain amount of demesnes, home farms, and other lands exempted from compulsion. It is difficult to ascertain the exact amount that should be deducted, since there is nothing in the return of untenanted land to show whether the lands are demesnes, home farms, &c., except that where there is a mansion house situate on a particular rating of land, it is shown in the return, and that rating may almost invariably be assumed to be a

Cd. 250, 1906.

III., p. 319.

XI., p. 104, col. 4.

XI., p. 49, cols. 7 and 8.

* It is important to note what precisely is meant by the term "non-residential" in this return. The Board's officials obtained from the records of the Commissioner of Valuation a list of all holdings over £25 in valuation, upon which the valuation of the buildings did not exceed £1. It was assumed that all such holdings were non-residential, but this assumption was checked, so far as was possible, by local inquiry, and all holdings which were found to be residential were eliminated. The return printed in the Appendix to the Eleventh Report contains the residue only.

XVIII.—*Continued.*

Amount of Land available for Relief of Congestion.

demesne or home farm. The return shows that there are over 120,000 acres of land valued at over £70,000 comprised in such ratings, which must be deducted from the amount available. A balance of about 540,000 acres remains, most of which must be very poor land, as its total valuation is only £30,000. Hence the amount of untenanted land that may be made available for the relief of congestion, and is not included under the heading of non-residential holdings, and therefore already considered, is not extensive.

XI., p. 104.

122. Turning to the third source from which land may be obtained for enlargement, namely, part of large residential holdings, there are within the area with which the Commission is concerned 2,445 holdings above £100 valuation, of which the total valuation is £505,340. Of these, so far as can be ascertained, 714 (the valuation of which is £233,106) are in the landlords' hands, and are therefore included in the two previous items; hence it would appear that there are only 1,731 holdings, the valuation of which is £269,234, in the occupation of tenants and tenant purchasers, part of which might be made available. If each holding was scaled down to £100 it would set free land the valuation of which is £96,134, but many of these large holdings are non-residential and were accordingly included in the first item considered. Therefore the amount of land to be obtained from these large holdings has a valuation of considerably less than £96,134.

123. While the above estimates of the disease and of the remedy are alike tentative, it would appear the land capable of acquisition in the Board's new area is hardly sufficient to relieve all the congestion in the same area, by enlargement of holdings. Moreover, no allowance has been made in these calculations for the not unreasonable claims of herds on the grass land to be acquired, nor for land that must under statute be provided for evicted tenants. It would, therefore, be a great advantage, if a working arrangement could be arrived at with the Estates Commissioners for placing at the disposal of the Board any suitable untenanted land, acquired by the former body, in the vicinity of the latter's area. We cannot, however, disguise from ourselves that, until there is a radical change in public opinion, it will not be easy to relieve congestion within the Board's area, by means of migration to land east of the Shannon. This makes it probable that the Board will be forced to rely, for some time, upon such land as can be acquired within its own area. So far as can be judged from the figures available this is not quite adequate for the relief of small landholders, and consequently every holding given to the son of a tenant, or to any other person not, at present, a landholder, will, to that extent, perpetuate congestion in the West.

XIX.—Comparison of Claims of Landless Men and of Congests to Grass Lands.

Paragraphs 33, 42 and 43.

124. We have already drawn attention to the growth of the agitation against migration, and have pointed out that where the Board bought large tracts of grass land outside the scheduled areas, they had, prior to 1903, no power to enlarge uneconomic holdings in the neighbourhood which were not actually upon the estate bought, and that small landholders in the vicinity, not unnaturally, resented the use of untenanted land in their neighbourhood (to their own exclusion), for the relief of men hardly worse off than themselves. Section 75 of the Land Act of 1903 attempted to remove this

See paragraph 42.

hardship, but as has been already pointed out the relief afforded has been somewhat illusory. If the present system were to continue whereby the Board buys land in districts, with the improvement of which they are not charged, for the relief of districts with which they are concerned, they should certainly be empowered to enlarge holdings under £10 valuation in the neighbourhood of the grass land, before bringing in migrants from a distance. As, however, our Report contemplates that the Board should have absolute power of enlarging holdings throughout the entire area over which they should operate, the point does not arise as regards that area.

XIX.—*Continued* Comparison of Claims of Landless men and of Congests to grass lands.

125. During the last few years, the Board have encountered a stronger and, we think, a less justifiable objection to the introduction of migrants from a distance, on the part of the sons of tenants and other landless men living in the neighbourhood of the grass lands which the Board seek to utilise for the relief of congestion. This opposition has become very serious since the passing of the Act of 1903, which not only authorised the Board, in part, to meet these claims but also, for the first time, made it generally possible for advances to be obtained from the State, for the purchase of land, by persons who were not tenants in occupation. The Act moreover called into existence a new body entrusted, among their other functions, with that of dealing with such claims. The result has been that the Board has found it increasingly difficult to utilise grass lands in any large quantity for the relief of congestion, owing to vigorous local opposition, and a demand has been made, by those who live in the neighbourhood of grass lands, that these lands should be acquired by the Estates Commissioners, who, not being responsible for the relief of congestion as a whole, are free to meet the claims of the local landless men. The situation has now grown so serious that we are convinced that, if these claims are persisted in and supported by public opinion, the problem of congestion as a whole cannot be solved, no matter what powers or what funds are given to the Board.

See paragraph 43.

126. It has frequently been stated that if the "ranches," as the large grass farms are commonly called, were divided into a number of holdings averaging £10 valuation and upwards, and given to the sons of farmers and other young men living in the neighbourhood, not only would this result in a large increase of national wealth, by reason of more being produced from the land, on account of a certain amount of tillage being substituted for grazing, but that it would also have a considerable effect in checking the continued drain of emigration which is so generally deplored. We do not feel called upon to discuss these suggestions, but we think it is our duty to state very definitely that such an utilisation of the grass lands, in the West of Ireland, is incompatible with the relief of congestion. If every acre of land within the Board's area were available for redistribution, they would hardly suffice to give each existing landholder an economic holding. While it is not necessary to bring every holding up to the £10 standard, on the other hand, it is neither possible nor desirable to scale down every holding to that standard, and we have already seen that even all the land that can be acquired, under the somewhat drastic measures we recommend, is not likely to suffice for the relief of the small holdings which it is desirable to enlarge. Hence every new holding that is created within the Board's area will mean the perpetuation of one or more existing landholders on holdings which are not sufficient to support life according to any decent standard. Consequently, it may be useful to examine the comparative claims of those who at present occupy uneconomic holdings, and those who have no land but live in the neighbourhood of the ranches.

See paragraph 123.

127. The position of the congests is quite clear; they are heads of families who have for some time been living on holdings from the produce of which it is impossible in some cases to sustain life, and, in most cases, to rear a family according to any adequate standard of living. Even if the redistribution of the grass lands is justified on moral and historical grounds, as the restoration to the people of their own, that argument seems to apply most strongly to the small landholders of the ultimate west. They are, to a large extent, the wrecks of past racial, religious, agrarian, and social storms in Ireland, and of famine catastrophies. In a bad year they are saved from extreme privation only by relief measures, and so constitute a serious financial danger to the nation: yet if men be the real test of the wealth of a nation, they are a most valuable potential asset.

128. The claim of the landless men for the manless land is on somewhat a different footing. "The land for the people" is sometimes said to be the expression of a natural right; but it cannot be said that the sons of tenants and other landless young men in any particular district have any better claim to the land in their neighbourhood than men in other parts of the country,

XIX.—*Continued.* Comparison of Claims of Landless men and of Congests to grass lands.

unless they are the direct representatives of men who were unjustifiably cleared off the land. The meeting of their claims means the giving of the land, not merely to a particular class who, in general, have no natural claims greater than the rest of the people, except geographical contiguity, but also the endowment of one particular generation of this class, to the exclusion of other generations and other classes. If the grass lands are given to these men, emigration may be stayed in these districts for a time, but the same problem will arise in the next generation. The land will only support one son of the new farmer, and the others must seek a living elsewhere than on the paternal holding, as at present do the sons of landlords and tenants alike. In the meantime, and in the future, the problem of congestion will remain unsolved and insoluble because the means of relief will have been otherwise used.

129. Accordingly, where the claims of farmers possessing totally inadequate holdings and those of landless men are in conflict, and, indeed, mutually destructive, as they are in the west of Ireland, we have no hesitation in declaring that the former should prevail. We say this, not from any want of sympathy with the natural aspirations of the sons of farmers to follow their fathers' calling in their native land, but because there is not enough land to go round. We believe that the congests have the stronger claims, and we are convinced that the perpetuation of congestion is a grave national danger. We recognise how great is the difficulty that will beset any body in the work of relieving congestion (involving as it does the shattering of the hopes of those who have so long cast their eyes upon the promised land), unless that body is supported by public opinion; and this is one of the chief causes which have led us to think that a semi-independent Irish body, with a large elective element, such as the new Board, is more likely to be successful in relieving congestion than an ordinary Government department. It cannot be too clearly laid down that if Parliament gives the exceptional powers and the funds asked for the relief of congestion, the responsibility for seeing that congestion is relieved rests solely with the Irish people. We have only to add that, if the acquisition of the grass lands within the Board's new area continues to be advocated for the settlement of landless men, those who do so cannot with reason seek to win sympathy for these claims, on the grounds of the miserable condition of the congests and of the necessity for relieving them.

See paragraph 100.

130. As the Board already possesses the power of giving land to the sons of tenants we do not propose that they should be absolutely prohibited from availing themselves of it, but we are strongly of opinion that the power should be very sparingly exercised, and that wherever the Board give a holding to a man who at the date of the creation of the new Board was not a landholder, they should be under a statutory obligation to give full particulars of such a case in their next annual report.

131. Before concluding this part of the Report, it may be well to observe that, if we were recommending the parcelling out of virgin soil amongst a number of settlers, we should not recommend the adoption of one uniform type of holding, of which the annual value would be about £10. We recognise that it might be better to have a higher standard, and, were it possible, to have a complete series of various sized holdings in any one district. Our recommendations are, however, concerned only with the relief of congestion and not with an ideal redistribution of land; and we have been brought face to face with a very urgent demand for an article that is limited. If the standard holding to be created were larger than we suggest, or if there were a complete series of various sized holdings, many small holders would have to go unrelieved. If land were available we would like to see many of the small holdings brought up to beyond the £10 standard, and many of those who have now a £8 or £9 holding enlarged to say a £15 standard. We cannot, however, disguise from ourselves that such a course will, owing to the shortage of land, be generally impossible, and that, if any appreciable number of small holders are given enlargements that would bring their valuation much above £10, it will be at the expense of other small holders who cannot then be brought up to that valuation. It is important to note that the Board are prohibited by the Act of 1891 from amalgamating holdings so as to bring the enlarged holding above

54 & 55 Vic., c. 48, s. 37 (2).

£20 valuation. Moreover, we do not think that the absence of variety in types of holdings will be so great as some have apprehended, since there will be several classes. First, the allotments of those whose present uneconomic holdings are not suitable for enlargement or who do not depend mainly upon the land. Secondly, there will be the great majority of holdings brought by enlargements up to the £10 standard, and, thirdly, there will be the larger residential holdings between £10 and £100 which are at present in existence and which will remain untouched, as well as larger holdings scaled down to not less than £100 valuation or left untouched as not required or not suitable for the enlargement of small holdings. Finally there will be the demesne and home farms of landlords.

XIX.—*Continued* Comparison of Claims of Landless men and of Congests to grass lands.

XX.—Economic effect of breaking up and re-distributing Grass Lands.

132. The enlargement of uneconomic holdings, which we look upon as the chief means of relieving congestion, can be effected only through an extensive scheme of migration, and this in turn involves the breaking up of a large amount of grass land. We have stated our belief that compulsory powers will be required in order to obtain the land necessary, and we have examined what seems the chief obstacle in the way of carrying out a scheme of re-settlement, namely, the conflicting claims of the congests, and of the sons of tenants and other landless men in the neighbourhood. Before discussing the mechanism of the scheme and the assessment of the price to be paid for land taken compulsorily, a very important question presents itself, namely, the effect which a redistribution of the grass lands may have upon the cattle trade. This question has been discussed at great length before us, and it has been urged that, even if all the difficulties in the way of migration can be overcome, yet the advantages resulting from the relief of congestion would be outweighed by the damage that the breaking up of the western ranches would inflict on the great cattle industry of Ireland. It was, moreover, suggested, that the greatest damage would be done to the very people whom the scheme was intended to benefit, namely, the small western farmer who is the chief breeder of young stock. We were so impressed with the importance of thoroughly considering the force of this objection, that we directed special attention to it, during our public sittings, and obtained much valuable information, not only from official witnesses like the Chief Land Inspector of the Board, the head agricultural expert of the Department of Agriculture and Technical Instruction, and the three Estates Commissioners, one of whom used to be the chief agricultural adviser to the Board, but also from a great number of practical farmers of all classes, from several of the largest graziers and cattle dealers in the West, and especially from nearly every one of the thirty-one witnesses nominated by the Irish Landowners' Convention.

133. Under the present system, there are three fairly distinct classes connected with the progress of the Irish calf to the beef-market. The first is the breeder, who is usually a small farmer with one, two or more cows. He generally does not sell his young stock before they are a year old, and hardly ever keeps them beyond two years. They are usually left out on grass not only during summer but during winter as well, with little but hay to supplement the scanty grass. They are seldom, except in some good farming districts, carefully sheltered and fed on roots and a portion of cake or corn. They are bought when from six months to two years old by the second class, the "grazier," whose land as at present used is best suited for feeding stores.* He keeps them for periods varying from six months to two years. They are usually out on grass the whole time, and seldom receive any additional food but hay. He generally sells them as two-year-olds, or three-year-olds, according to the state of the market, which sometimes compels him to keep them longer. The third class is the fattener or finisher, who lives mainly in the richer parts of Ireland or in Great Britain. Meath and Westmeath form the great home of the Irish fatteners, but there are

* Sometimes the breeder, generally the forwarder, and the finisher in Ireland are all graziers, but the term grazier is usually applied chiefly to the man who grazes store cattle.

XX.—*Continued.* Economic effect of breaking up and re-distributing grass lands.

small portions of fattening land in many counties, *e.g.*, Roscommon and East Galway, and larger portions in other counties, *e.g.*, Tipperary, Kildare and Limerick. Few of these men use roots for feeding in addition to grass and hay. The English and Scottish fatteners also buy large numbers of the more forward stores and fatten them in stalls in Great Britain, and it is stated that a good number of the alleged fat beasts from Irish fattening lands are really finished or made into "prime" beef in stalls in Great Britain before being placed on the beef-market. There are of course many variants upon this system: sometimes the breeder and grazier, sometimes the grazier and fattener are one and the same person, and more rarely the breeder keeps his young stock until they are fat; very often the cattle pass through the hands of more than one grazier. There are also many modifications of the rearing system, but the foregoing account is a fair description of the general course of the cattle trade, especially in the West.

134. It is pointed out that a comparatively small number of calves are exported, and that the majority of English and Scottish buyers do not want Irish cattle until they are forward stores. These buyers find the average Irish store unsuited for stall feeding, as practised in Great Britain, until they are over two years old, and it is stated that neither does the Irish fattener want to buy young cattle. Both classes of fatteners prefer to buy forward stores. It is said that the grazier is an indispensable middleman, and a necessary economic link between the breeder and the fattener, and that, therefore, any considerable breaking up of the store lands in the west occupied by the grazier, would destroy the market for the produce of the small farmers who are the chief breeders. Moreover it is urged that, in addition to the lessened demand for cattle between six months and two years old that would be brought about through the breaking up of the store lands, the supply of such young cattle would be increased by distributing these lands amongst small farmers who would, on the new farms, carved out of the grass lands, pursue the industry of cattle breeding, which they now follow on their own farms.

135. Obviously, however, the policy of thus increasing the supply when the demand is diminishing would not long be voluntarily persisted in, but it has been suggested that the small man would not have much choice, as he could not utilise the grass lands in the way they are now used, that is for feeding store cattle. It is urged that a number of small farmers (say 20) having small holdings (say 25 acres each) could not graze store cattle as well as one grazier (having say 500 acres), and that hence grazing could not be carried on so easily on the grass lands, when divided up into small holdings, as it is at present. It is further pointed out that these small men could not easily go far afield to buy young stock in the way big graziers do. It is clear that a sudden change over the whole of the West would involve a temporary dislocation of the course of trade, while the small man was adapting himself to the new conditions, and that the cattle trade would not benefit by the mere substitution of a large number of small graziers for a few big men. There seems, however, to be reason for thinking that if the graziers in the west of Ireland were gradually replaced by small farmers, these men might, under changed conditions, hold their cattle longer than they now do, and ultimately they might learn to keep them until they were suitable for the fattener, who might gradually be induced to buy cattle younger than at present.

136. The supporters of the present system urge that it is impossible for the small farmer to hold his cattle longer than at present, because he has his lands stocked with cows and calves and, occasionally, with yearlings, and that he could not without decreasing the number of his cows and calves have more yearlings and also two-year-olds. Several answers have been made to this argument. If any decrease in the demand for young cattle arose that made it more profitable for the breeder to keep his young animals for a year longer than at present, he might reduce the number of calves and cows that he now keeps. Again, the hypothesis that part of the grass lands now held by "graziers" is to be divided among

migrants means that the average small holder, who now has to sell his cattle young, would get an enlargement of his holding from the farm vacated by the migrant, and that consequently he would be able to keep his cattle at least a year longer without diminishing the number of his cows. The same remark would apply to the migrant, even if he used the grass land in precisely the same way as now, that is for grazing and not for mixed farming. Against this it is urged, as already mentioned, that small farmers cannot graze cattle as successfully as one man who has 500 acres in his own hands, since yearlings and two-year-olds will not thrive on small runs as well as on a wider range of pasture.

XX.—*Continued.* Economic effect of breaking up and re-distributing grass lands.

137. This point seems to be sometimes exaggerated, but if the small farmers were to attempt to carry on the cattle trade in precisely the same way as does the large grazier at present, we recognise that a very serious question would arise whether this economic disadvantage was sufficient to outweigh the social advantages of relieving congestion by breaking up grass lands. In that case the encouragement of co-operative grazing (which in future will in any case be very desirable in some districts especially on mountain land) would become of immense importance, as being apparently the only way of giving the cattle of small men large runs and a change of pasture, and so of overcoming the economic ills that might result from relieving congestion in the way in which we believe it must be relieved, *i.e.*, by redistributing the grazing ranches of the West. There is, however, as we have already stated, considerable reason for thinking that the change required by social causes, within the area to be assigned to the Board, would not prove disastrous economically. Small farmers, it is urged, would learn, and would be led by stress of economic circumstances, to adopt mixed farming and so carry on the rearing of cattle in a way more profitable to themselves, and more conducive to the national welfare, than the present methods of the grazier. The result would be that, if the land would not turn out more beasts than under the present system, it might turn out more forward, and therefore more valuable, ones. We believe that the process must be gradual and that consequently the trade will have time to adjust itself to the altered circumstances.

138. In making this report we are concerned with the question of the breaking up of the grass ranches, in order to relieve congestion, and not as a means of placing the cattle trade on a sounder basis, but it is right to call attention to an argument advanced before us, and elsewhere, to the effect that the cattle industry at present is not upon a thoroughly sound basis, and that, even if there were no question about breaking up grass ranches for the creation of small holdings in order to relieve congestion, the change might still be economically desirable. Not only have Irish farmers specialised in the cattle trade, but the specialisation, at any rate of late, has been in one phase of the industry—*i.e.*, the grazing of store cattle. For some years past the total number of cattle, including milch cows, in Ireland has averaged over 4,600,000, of which over one million are under one year old. During the same period the total number of cattle exported has averaged about 800,000, of which about 250,000 are fat cattle, and nearly double that number are store cattle, whilst the calves have averaged about 60,000. The figures vary considerably from year to year, but the number of stores exported has steadily increased. From this it is evident that of the million cattle which may be regarded as the average year's output, nearly half are exported as store cattle, and only a quarter as fat cattle, the balance being accounted for by consumption or wastage in Ireland.

139. It has been suggested that the store trade is the least profitable branch of the cattle trade, the most exhausting to the country* and

* During the time that the bone and muscle of young cattle are being built up on the store lands, valuable chemical elements are extracted from the soil, and if the cattle leave as soon as they attain maturity, the return is gained, not by the store lands but partly by the fattening lands of Meath and Westmeath, and mostly in the fattening stalls of Great Britain. Thus the country is left relatively poorer, as regards its reproductive capacity, by every young animal sold out of it.

XX.—*Continued.* Economic effect of breaking up and re-distributing grass lands.

the most precarious. Some consider that too many eggs have been put in one basket, and hence it is that so much apprehension has been felt at the threatened opening of the ports to foreign cattle. As this contingency is purely a matter of speculation it is only worth noting that two opinions exist. The first is that the free importation of stores, would, owing to the present condition of the Irish cattle trade, ruin the farmers, especially the small farmers, in Ireland. The other opinion is that, though the free importation would cause great temporary loss, it would ultimately have the advantage of forcing the Irish farmers to place their cattle trade upon a sounder basis, by avoiding undue specialisation in what some consider the least paying part of the cattle trade—rearing store cattle on grass until they are over two years old before fattening them. Much the same conclusion is reached by Professor Campbell, who pointed out that there had been an enormous increase in the imports of dead meat from the Argentine and other countries, and a very great continuous improvement in transit facilities and storage methods, with the result that foreign meat now enters into successful competition with home-fed beef of all but the best quality. The increase in the imports of foreign meat seems to suggest that foreign competition in the meat trade will be as keen, in the near future, as has been foreign competition in breadstuffs in the past.

VI.—Q. 20557, *et seq.*

140. Professor Campbell's conclusion was that the outlook for the cattle trade, as at present carried on, is extremely gloomy. He considered that it would be far better for the Irish farmers if much of the time and land and capital now devoted to the production of beef in some shape or other were directed towards dairying, pig rearing, and the poultry industry, and that if beef raising continues to be the main agricultural industry, the best hope of success lies in producing beef under different methods from those generally pursued in Ireland. Those who agree with him join in urging that the present system of growing and fattening consecutively is wasteful, that the processes should be made more concurrent, and that all farmers must be taught to depend less on permanent grass and more on roots and other tillage crops. In connection with this argument for a diversion, towards the production of butter, eggs, poultry, and bacon, of some of the attention now devoted to beef-raising, a fact may be pointed out which is not generally known—namely, that even at present the value of the amount of these four products exported from Ireland is about equal to the value of all the cattle exported. According to the statistics collected by the Department of Agriculture for their report on Irish exports and imports in 1906, the value of the poultry, eggs, butter, and bacon exported in that year was £9,430,093, whilst that of all the cattle exported (including fat beasts, stores, and calves) was £9,146,915.

IV.—Q. 20788, *et seq.*

141. Those who advocate the breaking up of a large part of the store land in the West of Ireland, purely with a view to the better organisation of Irish agriculture, and we, who recommend it, for the relief of congestion within the limited area assigned to the Board, are absolutely agreed upon the necessity of mixed farming upon small holdings, wherever practicable. It appears to us that the advantages of such a system, if intelligently and persistently carried out, are undeniable on farms where the family can supply the labour. The evidence given before the Commission went to show that in Ireland some small farmers do already carry on a system of in-feeding, and in Scotland small farmers largely in-feed and produce high quality beef ready for the market at two years old. We did not, however, see any small holding where this system was actually in practice. There seems to be no reason why Irish small farmers should not do likewise, provided they are taught and equipped with the necessary capital and buildings. Obviously, however, this change cannot suddenly be effected on small farms, but requires continuous agricultural education and organisation, and considerable outlay in providing buildings, stock and agricultural implements.

XX.—*Continued.*

Economic effect of breaking up and re-distributing grass lands.

142. Agricultural education and organisation are perhaps most necessary, and it is for this reason that we attach the utmost importance to the successful carrying out of the Department's agricultural work in the west of Ireland, to co-operative organisation, and to the absolute necessity for tillage on suitable land being impressed upon the Irish farmer. It will be seen later that there is already far more tillage upon small farms than upon large holdings. Even if there were no other economic reason, the necessity of growing potatoes for food, practically compels the small farmer to till, and involves the growing of a certain amount of cereals. It is almost equally important that the homestead should be adequately equipped with buildings. No doubt it would be desirable, if possible, to provide all the buildings at the outset, but many who know the congested and other very poor districts hold that what the small farmer mainly wants is a fair start, and that he will then gradually add the buildings largely by means of his own labour during the slack season.

143. There remains the question of the provision of additional capital for buying suitable stock and agricultural implements. One of the strongest reasons advanced why the elimination of the grazier, and the compulsion thus put upon the breeder to keep his cattle longer, would, in the present organisation of Irish agriculture, be difficult, is also connected with lack of capital. The inability of the small Irish farmer to keep his young stock beyond a certain age, owing to the fact that it is necessary for him to realise his profit as soon as possible, is probably as potent a factor in causing early sales as a shortage of land. Some Irish landholders now work as migratory labourers in Great Britain, though their own holdings would profitably respond to the application of the labour expended elsewhere, because their inability to await the result of their labour on their own farms forces them to seek a speedier return for it elsewhere. Many small holders sell their calves or their yearlings, though their farms might carry, at any rate, one of them longer, and though they might be able to rent a cow's grass in the neighbourhood. The main reason appears to be the necessity of meeting their pressing obligations, such as rent or purchase annuities, which forces them to realise as soon as possible any profits they have made on the calf or the yearling, even though they would largely increase that profit by holding on to the calf or yearling for another year. This difficulty must be met by a better organisation of agricultural credit, including the establishment of Land Banks, before a change on any large scale can be effected.

See paragraph 258.

144. The arguments generally put forward against the breaking up of grass lands and their division amongst migrated congests, namely lack of sufficient education, organisation, buildings and capital refer to difficulties that can be surmounted, in time, by care and money. These can be more usefully devoted to removing people from want than in succouring them when in want, but it is alleged that there are great natural and economic obstacles in the way of any marked changes from the present system of utilising Irish land. Thus, it is said that much of the land now grazed is from its nature unsuitable for tillage, and while we think that the quantity of such land within the Board's future area is often exaggerated, undoubtedly there is some, *e.g.*, certain fattening land, that ought not to be broken up. It would, however, be quite impossible to devise any legislative safeguard for such land that would not unduly hamper the Board's operations, and it is sufficient to express the hope that the Board's officers in advising what land should be acquired will, so far as is possible, exempt from their operations land that is best suited for fattening cattle. Another point that will have to be borne in mind by the Board before they decide to acquire grass lands for the relief of congestion is the supply of water and turf, especially the latter, and, where this is scarce, the facilities that exist for buying peat or a substitute.

145. We have next to consider an objection which goes to the root of the question, whether or not the substitution of mixed farming for a general

XX.—*Continued.* Economic effect of breaking up and re-distributing grass lands.

system of cattle feeding on extensive grass ranches in the congested areas, would be an economic disadvantage. It is argued that only by the "Ranching" system can foreign competition be successfully resisted; that it is in fact the only profitable method of utilising land, and that mixed farming, save in exceptional cases, cannot be made to pay.

146. This argument rests on the economic theory that the most profitable system of conducting an industry is that under which the labour employed and the capital invested yield the largest profit to the investors, and under which, therefore, surplus capital and labour are set free for more profitable employment elsewhere. It is unnecessary to examine the truth of this theory as applied to communities whose industrial developments and economic conditions differ widely from those of the West of Ireland. There manufacturing centres are few and far between, local industries are in their infancy, and fisheries are, for the present, confined to limited sections of the seaboard. In these circumstances, labour, diverted from the land, can find little profitable employment elsewhere in Ireland, and goes to swell the stream of emigration.

147. It may be that the holder of 1,000 acres of land in the congested areas derives a higher rate of profit on his expenditure by grazing and meadowing his land than if, while retaining the whole of it in his own hands, he puts it under a system of mixed farming. His wages bill is much lower, he is comparatively little affected by bad seasons, and the floating capital required for stocking the land is less than that necessary for the cultivation of the holding as an agricultural farm. But this is not the whole question. Under the system of mixed farming not only would employment be found for far more labourers and their families, but the total value of the land's output would, as we believe, be larger, and the land would, therefore contribute more to the general wealth of the country.

148. The abstract right of the holder of a large grazing farm to deal with it in such manner as will, in his opinion, return the largest profit on his outlay, is indisputable, and he can not be coerced into adopting any other system. If, however, the ranch is broken up into farms, say, of 25 acres, the holders would find themselves unable to live on the profit from their land under grass, and it appears to us that they would be compelled, not by legislation, but by the immediate needs of themselves and of their families, to turn to tillage as the only means of raising their earnings to the living wage standard. This view is supported by statistics collected by the Department of Agriculture for the Commisssion. The figures show that there is thrice as much tillage on holdings under fifty acres as on those over fifty acres. If a comparision be drawn between holdings under thirty acres and those over 200, within the area which we propose shall be brought under the administration of the Board, the results are even more striking. Omitting from the calculation mountain land used for grazing, there is on the small holdings proportionately five times as much land under corn crops, eight times as much under potatoes, three times as much under other green crops, and nearly five times as much in some stage of rotation as there is on the large holdings. Moreover it is worth noting that there are considerably more cattle on the small holdings than on the large even after allowing for the difference in the class of the cattle on the two and the excessive amount of mountain land on the large holdings.

XI., pp. 55–87.

XI., pp. 55 and 68.

149. To sum up; the result of a change from the one system to the other would, in our opinion, be—and this bears directly on the question of the relief of congestion—that

(1.) Many families, now in a state of poverty bordering on destitution, would be raised to a standard which, if not ideal, is at least tolerable, and would become a source of strength to the country, rather than as now, an element of weakness, cost and disturbance.

(2.) The 1,000 acres of land, taken above as an illustration, would produce a larger output, than at present and would thus contribute more to the national wealth. Such larger output would in time have a beneficial effect on the artisan class and the general prosperity of provincial towns.

(3.) The profit—and, as we hold, more than the profit—now received by the landlord and the grazier would be distributed in a much more productive form, among the small holders and their families.

XX.—*Continued.* Economic effect of breaking up and re-distributing grass lands.

150. Before leaving this subject we desire to draw attention to certain general suggestions supplied by the evidence given before us. If beef raising is to continue the main occupation of the agricultural population of the congested areas, it is questionable whether the present system is the best possible, and, it is contended that if small holders were to take the place of large graziers, their own interests would force them to adopt the better system, only possible when there is mixed farming. If so, the remedies suggested for the social evils of congestion would prove of benefit to the cattle trade. Nor is this all. Increasing foreign competition must make it more and more difficult to continue the present specialisation in cattle raising, and the difficulty may easily reach a point at which it will be profitable for farmers to devote much more of their time and money to dairying, and to pig and poultry breeding. The successful prosecution of these industries, however, involves a considerable amount of tillage, and that is only possible under a system of mixed farming—or in other words—of small holdings.

151. For the reasons stated we firmly believe that the substitution of mixed farming on the small holdings of the West, when they have been raised to an economic standard, will conduce, in a very marked degree, to the well-being of the people. And, if it may not with certainty be said that small holders will fully appreciate from the first the advantage to be derived from the adoption of tillage, still we are convinced that in this, as in the case of an extended system of migration referred to earlier in our Report, our proposals, though necessarily to some extent experimental, offer the best, if not the only, prospect of a general improvement in the condition of the small farmers of the West.

See paragraph 96.

XXI.—Method of acquiring Land and Question of Price to be Paid.

152. Though the granting of compulsory powers has been recommended for the acquisition of land held by a landlord or a tenant-purchaser, or of a tenant's interest in a holding, we hope that resort to these powers will seldom be found necessary, and, of course, these powers can be used only when voluntary negotiations fail. It is necessary, however, for us to consider the method in which the Board should in future acquire land, not only by voluntary negotiations, but also by compulsion. It was suggested at an early stage of our proceedings that all the land work of the Board should be transferred to the Estates Commissioners, and we have already stated that we do not consider this proposal practicable under the constitutional conditions at present existing in Ireland. At a later stage in our proceedings it was suggested that, whilst the Board might continue as the land-improving authority within whatever area might be assigned to them, the work of purchasing estates should be done by the Estates Commissioners. It was suggested that when the Board desired to buy an estate they should request the Commissioners to purchase it, and that the Board should have nothing further to do in the matter until the estate was vested in them, when they would start the work of re-settlement. It was contended that this arrangement would remove many of the evils of dual administration, notably the evil of two public authorities buying land in the same area or in adjoining areas, and of there being, as at present, two sets of valuers or inspectors negotiating for the purchase of adjoining estates on possibly somewhat different principles, and basing their offers on different standards of value. This suggested division of the work, which is at present done by the Board, seems to us to be open to many objections, notably the weakening of responsibility that would ensue, since the body that bought the land would not be responsible for the resettlement, and the body that had to re-settle the land would have had no determining voice in the price at which the estate was bought. Moreover, the fact that the tenants would have to deal with two sets of public officials in

See paragraph 100.

XXI.—*Continued.* Method of acquiring Land and question of price to be paid. See paragraph 101.

connection with the acquisition of their holdings would not, in our opinion, be likely to make for smooth working. Accordingly, we have decided not to recommend that this suggestion should be adopted. To avoid, as far as may be possible, the evils of dual administration, we have recommended that the Board should have exclusive land purchase jurisdiction over the area in which they are to operate, *i.e.*, Connaught, Donegal, Clare, Kerry, and part of Cork, and that no estate should be sold under the Land Purchase Acts, in that area, except to the Board, or direct to the tenants, where the Board certify it may so pass.

153. At present, when the Board wish to acquire an estate, it is usually, with the consent of the owner, inspected by one of the Board's officers, and, of late, the Board have invited landlords to give some particulars of the net income derived from the estate. It seems to us that a slight modification might be introduced into the present system, which would in itself be an advantage, and would facilitate the working out of the details of compulsory purchase, if that became necessary. The Board in making an offer for an estate have, so far as materials are available, to bear in mind two factors; in the first place, they have to consider what sum the landlord is likely to expect for his property, having regard to the income which he is at present deriving from it, and secondly the price at which it will be possible to re-sell it to the tenants after having effected the necessary improvements. It has been stated that second term rents (including any judicial rent fixed after the passing of the Land Act of 1896) or their equivalent are the only basis upon which tenants are willing to buy, and further that the purchase annuity should be less than such rent by a certain percentage, intended to give a margin of security against agricultural depression during the period for which the annuity would run.

154. The reason why first term rents and non-judicial rents are thus reduced to the standard of second term rents is, we presume, the fact that if the rent actually paid is not a second term rent or its equivalent, it is either a first term rent which will be ripe for revision in three and a half years at the outside (since if it was fixed subsequent to the passing of the Land Act of 1896 it is regarded as equivalent to a second term rent) or else it is a non-judicial rent which may not be a safe basis of purchase. In most cases non-judicial rents are probably higher than second term rents, but in some cases they are nearly as low. Moreover, some non-judicial tenants have not had a fair rent fixed, and some first term tenants have not had a second term fair rent fixed, though entitled to do so, because they did not anticipate any material reduction. On the other hand some tenants who would have got a substantial reduction were deterred from going into Court by the existence of arrears. As there seems to be a general agreement that second term rents should be made the basis of sale, and as it was adopted by the Land Conference of 1903, and subsequently embodied in the Land Act of the same year, it is apparently unnecessary to discuss the matter at further length.

155. Where the rental of the estates that the Board propose to purchase consists of second term rents, or their equivalents, they have the necessary material on which to estimate the re-sale price, but in most estates part of the rental consists of first term rents or non-judicial rents, and, of course, where untenanted land is purchased the basis of re-sale prices, namely, second term rents, is lacking. At present the Chief Land Inspector to the Board, or his assistants, when inspecting the lands, assess what they consider would be the fair rent of such land, but his experience has led him to hold very strongly that it would be a great advantage if the fair rent department of the Land Commission were authorised at the Board's request to assess a fair rent on any land that they proposed to buy. He considers that their decision, as that of the statutory rent-fixing authority, and as the body actually engaged in the fixation of fair rents, would carry far more weight than that of any other valuers. At present, as soon as the Board acquire a property, and put tenants on the untenanted land, they can, under the existing law, call upon the Land Commission to assess a fair rent upon any part of the property not subject

XI. p. 44

XXI.—*Continued.* Method of acquiring Land and question of Price to be paid.

to such a rent. It has been suggested that the Land Commission would be unwilling to undertake the work of estimating a fair rent on land which the Board proposed to buy, and that the proper course would be to transfer to them some of the sub-commissioners who are now employed by the Land Commission to fix fair rents.

156. We, however, see no reason why it should not be arranged, by legislation if necessary, that this work should be done for the Board by the Land Commission. We do not suggest that a fair rent should actually be settled judicially on the land which the Board propose to buy, but that a sub-commissioner should inspect the land, exactly as he would if he were valuing it for a fair rent, and fill up most of the various items in what is commonly known as the "pink schedule." In order to avoid the necessity of holding a public inquiry and taking evidence, only the gross fair rent should be shown, and a note added indicating the reductions to be made in respect of improvements, if they are subsequently shown to have been made by the tenant. In the case of untenanted land no question could arise as to who made the improvements, and the fair rent would always be the gross fair rent. These schedules, and a summary of them for the estate in question, should then be transmitted by the Land Commission to the Board. We are strongly of opinion that the sub-commissioner who does this work should remain an official of the Land Commission, and be for three or six months in each year engaged in the actual fixation of fair rents, and be only for the balance of the year engaged in the work of estimating fair rents for the Board. This would keep him in touch with the actual conditions of fixing fair rents.

157. The reports thus sent in would supply one of the factors which are necessary to put the Board in a proper position to make an offer. The landlord should be invited to send in a statement of his net income, and this would supply the other factor. As the proceedings contemplated are voluntary, the landlord would retain his present right of refusing to allow anyone, whether a sub-commissioner from the Land Commission or a valuer from the Board, to inspect his land, and of course he could decline to give any information about his net income. With such information as the Board have been able to obtain from these two sources, and with any other information they may have got elsewhere, they should then proceed to make an offer for the estate precisely as they do at present. If their offer was accepted, the sale would go on as at present. If the offer was declined, then voluntary negotiations would fall through, just as they do at present when the landlord refuses the price offered. The Board would then have to consider their position and decide whether, in view of all the circumstances of the case, it was desirable that they should exercise their powers of compulsion. If they decided to do so they should then pass a formal resolution stating that they considered that the acquisition of the property was necessary for the relief of congestion, and after the publication of this notice in the *Gazette*, the Board should be empowered to send a surveyor to prepare a schedule and map of the lands. They should then re-affirm their resolution, specifying the land to be compulsorily acquired. Once this resolution was passed, the lands must ultimately be vested in the Board, and the price must be fixed by the Court, unless it is established to the satisfaction of the Court that part of the land so included was exempt from the operation of compulsion by reason of its being a demesne, home farm, &c. In such a case the resolution would be null and void so far as such exempted land was concerned. We do not consider that there should be any appeal from the decision of the Board that the land in question was required for the relief of congestion. If it was shown that the person with whom the Board had negotiated was not the real owner of any part of the lands specified in the resolution, then such real owner should have the right of accepting, if he thought fit, the offer made by the Board. If he refused that offer, then the Court would proceed to fix the price. Once the resolution was passed, the Board should have nothing further to do with the acquisition of the lands, and all questions of price would pass away from them to the Court, who, it is recommended, should settle the price on the principles we shall now proceed to describe.

XXI. *Continued.* Method of acquiring Land and question of Price to be paid. See paragraphs 153–4. Section I.

158. A great deal of evidence was given before the Commission as to the price that ought to be paid for land acquired compulsorily. When the landlord sells his land voluntarily to the Board, or to the tenants, the matter is one of bargaining. Since 1903 second term rents have been, as already mentioned, admittedly the basis of price, and the Land Act of that year contained a rough and ready method of approximating first term rents to second term rents. The purchaser's chief considerations, at present, are the relation of the purchase annuity to his rent, and the period for which the annuity is to run. The landlord, on the other hand, bears in mind the income that he has derived from the land over a series of years, and the amount of money that will be required, after redeeming all charges on the land, to yield him his former profit income, when invested at a certain rate of interest. Where he is absolute owner and can invest the money in any security he likes, the rate, of course, varies greatly with his individual views as to investments. Most estates in Ireland are, however, settled property, and the field of investment is limited to certain securities marked out by Acts of Parliament, and in such cases the rate the vendor may expect to receive varies, consequently, within much smaller limits. It is not suggested that the securing of net income is the only factor in the mind of the landlord. He may be glad to get his net income from something other than Irish land, and he may be apprehensive of future reductions in rent or in the profits of farming, and so be willing to take a sum that would not produce his income. On the other hand, he may for various reasons be disinclined to sell, and be tempted to do so only by the prospect of financial advantage. All these considerations have free or comparatively free play in the bargaining that is possible in a voluntary sale. But where the landlord is forced to sell there is not the same free play, and no arbitrator under a compulsory scheme can put himself exactly in the position of a voluntary vendor or of a voluntary purchaser. If there were in Ireland an open market, as there is in some countries, there might not be much difficulty in determining the market price of the land, but an estate in Ireland is seldom sold except to the tenants, and the terms vary enormously and on no settled principle.

159. Consequently resort to some solution other than arbitration as to what is a fair price seems desirable. It has been suggested that the price given should be the full agricultural value of the land as determined by an experienced valuer. This seems to us a very indefinite rule for the fixation of the price of land taken compulsorily. Few valuers in Ireland agree as to what is the full value of a given piece of land. For over twenty-six years fair rents have been fixed under various Land Acts in Ireland, yet Parliament has never found it possible to frame a definition of a fair rent, nor the Land Commission any definite rules for the guidance of their officials. The Fry Commission is said to have proved that fair rents were fixed on no settled principle, and that each valuer was forced to rely largely on his own unaided judgment, and we have had evidence to the same effect from a very experienced witness (Mr. Commissioner Bailey), who was himself engaged for sixteen years in the administration of these Acts. Undoubtedly, there has been a great deal of dissatisfaction expressed both by landlords and by tenants as to the fixation of rents, the reality of which is revealed by the great number of fair rents appeals that have to be heard every year. If so much uncertainty attaches to the fixation of the annual value of land, the difficulty of fixing the capital value would not be likely to be less, nor would the awards be more likely to command general acceptance. Hence we think that this system of assessing the agricultural value of the land to be taken compulsorily should be resorted to only where there is no more satisfactory method available.

III. Q. 16285-9.

XXII.—Price to be based on Net Profit Income.

160. We are of opinion that, where land is taken compulsorily from a landlord for public purposes, the ideal to be aimed at is that he should not be put in a worse financial position than he was in before. We have considered very carefully how this can be best attained, and have come to the conclusion that,

where the landlord can furnish satisfactory evidence of his average net profit rent (as explained hereafter) over a series of years, the price to be paid should consist of two sums, one sufficient to pay off all charges which seem suitable for redemption by the State and the other sufficient to yield when invested at a certain rate (to be determined hereafter) his average net profit rent, compensation for sporting rights being included if such rights are acquired. We are also of opinion that, in fixing the price according to the principles explained in detail below, the Court shall be entitled to increase or decrease the price by such amount, if any, as it considers represents the capitalised value of the difference in the net income, which might arise during the next five years, if no sale were to take place, from the operation of existing economic or natural causes, and (in the case of untenanted land) from the actual condition of the land itself. Where satisfactory evidence of net income is not available then the price to be paid should be such as the Court shall consider to be the full value of the interest to be acquired, having regard to all the circumstances of the case. We shall now proceed to explain what precisely is meant by the foregoing statement, and, as the matter is of vital importance, we shall be forced to go into the matter in considerable detail.

XXII. *Continued.* Price to be based on Net Profit Income.

161. The first point to be explained is what precisely is meant by average net profit income. Net income was taken by the Irish Land Conference as being income, that is second term rents (including all rents fixed subsequent to the passing of the Land Act of 1896), or their fair equivalent, *less* costs of collection, where such exist, not exceeding 10 per cent. Even in this definition or description, which relates to something very different from what we conceive to be net profit income, there are several obscure points. Second term rents or their fair equivalents might mean the book rents, or the rents actually collected. On many estates the landlord never hopes to collect his full rental, and if the book rental, instead of the receipts, were taken as income, the landlord's income might appear larger than it actually was. On the other hand, if only the rents collected are considered, an allowance must be made for what is, at any rate in many cases, an asset of some value, namely, arrears.* Our suggestion is that a landlord's gross annual income should, in most cases, be taken to be one-tenth of his total gross receipts (from the lands in question) during the ten years prior to the day on which the notice of compulsory acquisition was published in the *Gazette*, subject to a deduction or an addition in respect of arrears as determined according to the following rules.

See Parliamentary Paper, No. 89 of 1903, p. 6.

162. If arrears outstanding at the beginning of the decennial period have not been decreased during the period, the average gross receipts have not exceeded the nominal rental, and represent the gross income. In such a case the arrears may be disregarded as not being an asset of value to the landlord, and nothing should be paid in respect of them. If, on the other hand, the average gross receipts are found to have exceeded the nominal rental, this is because the arrears have been reduced. Here the net rental represents the gross income, for the sum paid in respect of arrears cannot be regarded as a permanent addition to the nominal rental, though the payment indicates that the arrears, if any, still outstanding, are an asset of value.

163. We, therefore, recommend that in such a case it should be the duty of the Court to add to the price such a sum as would purchase a terminable

*There seems to have been some confusion in some of the evidence given before the Commission on the question of arrears, *e.g.*, statements were occasionally made that only one or two years' arrears could be recovered. The facts are that a landlord can recover one year's arrears by distress, two years' by ejectment, and that as regards any further arrears he is in the position of any other creditor, and has, of course, the ordinary creditor's remedy for the recovery of a debt. Special reference was made to the recovery of arrears on sales. The landlord in deciding the number of years' purchase he will accept, may of course say "I will sell at so many years purchase," without considering what part of that price is due to the fact that the tenants owe arrears; or he may say, "I will sell at so many years and add so many years rent for arrears." The bonus is equally payable upon the total price in either case. The point, of which some mention has been made, about adding only one year's arrears to the purchase money has reference to settled estates only. In that case, the landlord is entitled to be paid, for his own use, one year's rent out of the purchase money, in respect of arrears, if he proves that so much arrears are due, though, if the estate is in settlement, the vendor is entitled to the income only of the remainder of the purchase money.

XXII. *Continued.* Price to be based on Net Profit Income

annuity equal to the average amount of arrears paid during the preceding ten years, if such annuity were to run until the payments made in respect of it were equal to the amount of the arrears outstanding at the date on which the Board determined to acquire the estate compulsorily. While these arrears are, judging from the preceding ten years, of value, yet, since only a limited amount would, judging from the past, be paid off each year, their present value is not their actual amount, but the present worth of an annuity, equal in amount to the average excess of the annual payments over the nominal rental, if such annuity were payable for the number of years required to extinguish the present amount of the arrears. There remains one exceptional category of arrears of great difficulty, namely, where there were no arrears at the commencement of the decennial period, but where arrears have accrued during that period. In this case the average gross receipts remain the gross income. No materials, however, exist for formulating a method of estimating the probability of the subsequent payment of these arrears or the rate at which such payments would be effected. Such cases must be extremely rare, and we can only suggest that the fixation of the sum, if any, payable to the landlord in respect of such arrears, should be left to the discretion of the Court.

164. The three preceding paragraphs indicate the manner in which the average gross income of the landlord should, in our opinion, be ascertained and the value of the arrears determined. In order to arrive at the net profit income, several deductions have to be made from the average gross income. We have already alluded to the agreement, which seems to be general, that second term rents should be the basis of the sale. It will be necessary to scale down that part of the average gross income, paid during the last ten years, which consisted of first term rents and non-judicial rents, to a second term standard. This reduction to second term rents does not apply to untenanted lands since there is no tenant on the land, and consequently no one who would be entitled to have a fair rent fixed. If the landlord allows the Board, when they contemplate the purchase of his estate, to send a fair rent sub-commissioner to value his lands, the material for making the reduction is available ; if he refuses, the valuation must be made as soon as the Board have passed the resolution for the compulsory acquisition of the land. The fact that, in three or four years from now, it may be possible for some tenants to have fair rents fixed for a third judicial term, does not seem to affect this recommendation. If a fair rent is fixed to-day on a farm, there is no reason why it should be less if it is being fixed for a second term, than if it is being fixed for a first term. Similarly a rent fixed in 1912 should not, unless changes are made in the law, be less, because it is being fixed for a third, instead of a first or second, term.

See paragraphs 153 and 158.

165. The next item to be deducted, from the gross income left, consists of the costs of collection, including law costs. Where an agent is employed the average salary or fees paid him must be deducted. Where a landlord saves agency fees by collecting the rents himself, the Court must decide what deductions, if any, should be made, having regard to the fact that the purchase of the land will leave him free to employ his time otherwise. We suggest that the average agency fees and law costs, should be calculated for a period of fifteen years, not ten years, as taking the smaller period might unduly swell the average law costs, if a fixation of rent came within the decennial period, and, on the other hand, might unduly reduce the average law costs, had the fixation come just before the beginning of the period. We consider that the deduction of the full average law costs and agency fees should be made, as we propose later that the State should defray the necessary and proper costs incurred by reason of the sale. Against the fact that the landlord may consider himself morally bound to give his agent a bonus on retirement, it may be urged as an off-set that the landlord will receive without expense to himself a clear and readily transferred title to his property (which as a result of sale will be in the form of money or stock) instead of a title to land which is generally more or less involved and not readily transferable.

See paragraph 206.

166. A further deduction that has to be made are charges, the payment of which was involved by ownership of the land, and which cannot be redeemed

XXII. *Continued.* Price to be based on Net Profit Income.

when land is sold. These consist of poor rate (now payable by the landlord practically only in respect of untenanted land), drainage maintenance charges, where existing, and sometimes baronial railway guarantees. As these charges cannot be redeemed, they will have to be paid by the purchasing tenant, and consequently the average sum the landlord has paid, during the decennial period, in respect of these charges, must be deducted from his gross income, in order to arrive at his net income. In the case of untenanted land poor rate of course causes a very considerable difference between the gross and the net income.

167. The above deductions leave what would generally be described, at the present moment, as the landlord's net income, but that is not the income that we propose should be secured to him, by the payment of a certain sum of money, or the transfer of a certain amount of stock. We have decided to recommend that the landlord should be secured his net profit income, because we feel that the effect of a system of valuation must be uncertain, and that, where the sale is compulsory, a landlord should not be asked to accept terms which might put him in a worse financial position than he was in before. It, however, is not our intention to suggest that he should be put in a better financial position, as would generally happen if his net income, without further reductions, were capitalised. Consequently we recommend that from the net income, ascertained as set out above, there should be deducted the amount of certain charges which he has to pay, and that only the balance—which may be regarded as his profit income—should be secured to him. Of course, the capital amount, due upon these charges, should be paid off, and should form part of the price for which the Board will be responsible.

168. In the first place, there are certain charges on most Irish estates, such as quit and crown rents, head rents, ecclesiastical or impropriate tithe rentcharges, which at present have to be redeemed, when the estate is sold under the Purchase Acts. If the preservation of the landlord's net income, and not of his profit income, were taken as the basis of sale, it would, generally, be necessary to give him a greater number of years' purchase of that income, than he would have to give of the annual amount of these charges. In such a case he would make a profit by redeeming them out of the purchase-money. On the other hand, if he had to give a greater number of years' purchase of them, than he received of the net income, he would sustain a loss through their redemption. This profit would not have been made, or this loss sustained, were it not that a compulsory sale took place. Any profit or loss, caused by the present compulsory redemption of charges, does not seem objectionable under a voluntary sale, since it is one of the factors which guide the landlord in the price to which he agrees. He does not, however, seem to be entitled to the profit when the State, in order to secure him from financial loss, undertakes to secure his net income, and he should not be liable to the loss, otherwise the State will not be fulfilling its undertaking.

169. In the case of a sale under the Land Purchase Acts, quit and crown rents are redeemable at 25 years' purchase. If the land subject to these rents is not being sold under the Land Purchase Acts, they are redeemable only with the consent of the Commissioners of His Majesty's Woods, Forests, and Land Revenues; and the rate of redemption may vary, but is never less than 25 years' purchase. Where an estate is being sold under the Purchase Acts, an ecclesiastical tithe rentcharge, if varied and reduced in accordance with the Tithe Rentcharge Act of 1900, is redeemed at $22\frac{1}{2}$ years' purchase, and if not varied and reduced, at 20 years' purchase. In the former case, the charge can be redeemed only when the lands liable are being sold under the Land Purchase Acts. In the latter case, the charge may at any time be redeemed by the person who has to pay it; but not if the lands liable are being sold under the Land Purchase Acts he has to give $22\frac{1}{2}$ years' purchase instead of 20.* Where a tithe rentcharge has been converted into a terminable annuity, under the Irish Church Act of 1869, the redemption price is fixed

* It has been ascertained that 2,684 ecclesiastical tithe rentcharges have not been varied under the Act of 1900. Of these only 40 have been redeemed otherwise than in consequence of sales under the Land Purchase Acts.

XXII. *Continued.* Price to be based on Net Profit Income.

having regard to the unexpired period of the term for which it is payable, by an actuarial calculation in each case. Lay or impropriate tithe rentcharges used to be redeemed at about 20 years' purchase, but, following the decision in Kemmis Estate, they are now usually redeemed at about 23½ years' purchase. Head rents, rent-charges, &c., are redeemed at prices fixed by the Land Commission varying from 20 to 27½ years' purchase, in accordance with the character of the security. Recently the price has averaged between 25 and 26 years' purchase, the rate depending mainly on the margin of security—*i.e.*, the difference between the rental of the land and the amount of the head rents.

170. An impropriate tithe rentcharge furnishes a good example of the difference between the system of securing a landlord his net income, and that of paying off these charges, and then securing him his net profit income. If the rate of interest derivable from authorised securities is, say, 3¾ per cent., and if a landlord's average net income during the decennial period is shown to be £1,000 a year, £26,666 would be required to give him this net income. If, however, the estate from which he derives this income is subject to an impropriate tithe rentcharge of £100 a year, and if no deduction were made in respect of this charge, he would have to pay the owner of the impropriate tithe rentcharge about £2,350, and the balance, £24,316, invested at 3¾ per cent., will yield him nearly £912 a year instead of £900, his former net profit income. If, however, as we suggest, the method in which the price is arrived at is that the Board should pay off this charge and give the landlord sufficient to yield his net profit income of £900, the total amount required would be £24,000 *plus* £2,350, or £316 less than under the other method, a saving of over 1 per cent. Of course, £100 impropriate tithe rentcharge is seldom or never payable out of an estate, of which the net income amounts to only £1,000, but then there are generally other charges, such as quit and Crown rents, &c., mentioned above, which have been ignored in this illustration for the sake of simplicity. On the other hand, if the rate of interest obtainable from the purchase of authorised securities rose to a certain point, then the method which we suggest would save a landlord from loss, in the redemption of some charges. For instance, if the rate obtainable rose to say 4½ per cent., he would receive less than 22¼ years' purchase of his net income, whereas he would have to give about 23½ years' purchase to redeem an impropriate tithe rentcharge, 25 years' purchase to redeem quit and Crown rents, and possibly more for head rents. Consequently, whilst the method we suggest would prevent the landlord from making a profit, to which we think he is not entitled, in view of the fact that he is going to be secured, from trust securities, the net profit income he formerly had from Irish land, it similarly would prevent the intention of preserving this net profit income from being defeated, owing to a rise, due to fluctuations in the money market, in the rate of interest obtainable.

171. We think that certain other charges such as mortgages should be, with a certain modification, treated in the same way as permanent charges such as quit and Crown rents, tithe rentcharges, &c. If no deduction is made from the landlord's net income in respect of mortgage charges, and if the rate of interest, yielded by the investments that are made in order to produce that income, is lower than the rate of interest payable under the mortgage, the sale will bring the landlord an increase in his profit income, just the same as it will if no deductions are made in respect of the permanent charges already referred to, since he will receive a greater number of years purchase of his net income than he will have to give of the charges. Thus, as in the case taken before, if a landlord has £1,000 a year remaining after the deductions previously specified are made, and if the rate of interest derivable from authorised securities is 3¾ per cent., it will take £26,666 to buy stock to produce his income. If, however, there was a mortgage on the estate of £10,000 bearing interest at 5 per cent., then the landlord before sale had to pay £500 a year out of his income, and his net profit income was only £500. If the mortgage is not redeemed, and no deduction made from the net income in respect of the annual amount payable under it, the landlord would receive £26,666 of which £10,000 would pay off the mortgage and the balance invested (at the assumed rate of 3¾ per cent.) would yield an income of £625. Hence the result of the State's effort to

XXII. *Continued.* Price to be based on Net Profit Income.

preserve the landlord from financial loss, as the result of compulsory sale, would be to increase his profit income by 25 per cent. If, however, the State pays off the mortgage and gives the vendor sufficient to produce only his net profit income, the amount required will be £10,000 (to pay off the mortgage) and £13,333 (to bring in the landlord £500 a year), and the result would be that the State would pay £3,333, or 12 per cent., less and the landlord would still preserve his net profit income.

172. If the position was reversed, if the rate of interest payable under the mortgage was less than the rate at which the landlord's net profit income is capitalised, the arrangement suggested would relieve the landlord from the loss which he would otherwise incur. Thus if the rate of interest payable on the mortgage of £10,000 was only 4 per cent. the landlord's net profit income would be £600 a year, and if the rate of interest derivable from investment in authorised securities was 4½ per cent., then, under the scheme suggested, the redemption of the mortgage would cost £10,000, and the money necessary to secure the landlord his net income of £600 would be £13,333. If, however, net income, and not net profit income, were adopted as the basis of capitalisation, the landlord would receive only £22,222, of which £10,000 would have to go to pay off the mortgage, and he would be left with but £12,222, which would yield him only £550 instead of his net profit income of £600. These cases are not likely to occur, and, in ninety-nine cases out of a hundred, the result of the adoption of the scheme we recommend will not be to safeguard a landlord against loss to which he should not be subjected, but will be to prevent him making a profit, which he is quite entitled to secure, if he can, in a voluntary sale, but to which, we think, he is not entitled, if the State goes out of its way to protect him from any loss arising out of the compulsory acquisition of his property.

173. The objection commonly advanced against the scheme suggested, is that no allowance is made under it for the landlord's "Equity of Redemption." The term of course refers to the right, usually possessed by a mortgagor, to cancel the mortgage, whenever he wishes, on payment of the principal sum and all interest due. This right is valuable, only when the mortgagor can borrow money at a lower rate of interest than that which he has to pay under the mortgage, or when he has money of his own which he cannot invest in a security of a similar standing at a rate as high as that payable under the mortgage. Consequently the equity of redemption is valuable, other things being equal, when the interest payable on the mortgage is high because, by borrowing at a lower rate, he can make a profit by paying off the mortgage; if the rate of interest is low, the equity of redemption is of little value, because there is not much margin for making a profit by redeeming the mortgage. The value of the equity of redemption depends also on the value of money; when money is dear it is less valuable than when money is cheap. Apart from the value of money at any moment, the rate at which a landlord can borrow on a mortgage depends mainly upon the margin of security, that is the excess of the profit income over the interest payable on the mortgage. Thus a landlord with a clear net income of £1,000 a year from an estate could borrow £10,000 on mortgage much more cheaply than if his clear net income were only £600; in fact, in the latter case, it would usually be impossible to borrow £10,000 on a mortgage on the estate.

174. The annual value of the equity of redemption might be measured by the excess of the rate payable on the mortgage over the rate at which the mortgagor can borrow. If a landlord paying interest at 5 per cent. upon a mortgage of £10,000, found that he could borrow at 4½ per cent., or that he could not invest money of his own in a similar security so as to yield more than 4½ per cent., then he could save ½ per cent. annually on the amount of the mortgage by exercising his right to redeem, and the annual value of the equity of redemption would be ½ per cent. upon £10,000, *i.e.* £50 a year. If it were possible for him to borrow at 3¾ per cent. (which, for the purpose of illustration, we have assumed to be the rate derivable from investment in trustee securities) he could make an annual profit of £125 by paying off the mortgage, but, if money could not be borrowed at less than 5 per cent., the equity of redemption would be valueless.

XXII. *Continued.* Price to be based on Net Profit Income.

175. It is doubtful whether the equity of redemption is often of any value in Ireland, apart from the operation of the Land Purchase Acts, *i.e.* whether landlords find it profitable to redeem their mortgages. There is some reason for thinking that the right has in general become valuable only when, owing to the intervention of Government, money can be borrowed by tenants, at a low rate of interest, for the purchase of their holdings. If tenants had to borrow their purchase money from anyone but the State they would have to pay more for the loan, and consequently could not generally give a price sufficiently high to induce a landlord to sell, and the equity of redemption would not be often exercised. If tenants give only twenty years' purchase of their rents, the equity of redemption is of no real value, unless the rate paid on the mortgage is over 5 per cent. If twenty-five years' purchase of the rents are given the equity of redemption is enormously increased in value. In this connection, it is not irrelevant to draw attention to the fact that though any landlord may redeem a tithe rentcharge, which has not been varied and reduced under the Act of 1900, at 22½ years' purchase, it is, as has been already noted, seldom done. As a landlord could make a profit by borrowing at less than 4½ per cent., and redeeming the tithe rentcharge, the fact that the majority of payers have not done, so seems to suggest that it is not generally possible to borrow at less than 4½ per cent. on Irish land, and that therefore the equity of redemption is not in general so valuable as some suggest.

See footnote, p. 61.

176. The impossibility of deciding whether the equity of redemption is of any value, or not, without inquiring into all the circumstances of the estate, may be illustrated by the following example. If a landlord whose gross income was £1,000 a year, but whose net profit income was £500, wished to mortgage his estate for say £6,000, he might find great difficulty in getting that sum lent on mortgage, even though he was willing to pay 6 per cent. interest, and, if the mortgage was effected, the equity of redemption might seem of little value, despite the high rate of interest, in consequence of the smallness of the margin of security. It, probably, would be of little value if the £500 difference between his gross income and his profit income arose from fixed charges. If, however, £300 was payable as a jointure or as a terminable annuity, the equity of redemption might be very valuable, because when that charge fell in, the profit income would be £800 instead of £500, and whatever interest the landlord had to pay on the mortgage of £6,000, when his net income was only £500, he could certainly borrow at less than that rate, when his income rose to £800.

177. We accordingly think that whilst the equity of redemption is in no case, except for the intervention of the State, worth what it would be made worth if a landlord's net income, without any deduction being made for charges, were capitalised at, say, 3¾ per cent., or at whatever rate may be obtainable from investment in authorised securities, we do think that in many cases the right is valuable. Accordingly, we recommend that the Court, which will have to deal with the question of price, should have power to award a sum in respect of the equity of redemption, if the conditions of the estate show that the right is of any real value.

178. It has been suggested that if this system of assessing the compulsory price by redeeming charges and then paying a sum sufficient to yield the landlord's net profit income is adopted, the intention of the Legislature might be defeated by the formation of a landlords' friendly society for the purpose of advancing temporarily to landlords, about to sell, sufficient money to pay off their mortgages. If the landlords in question were charged a low rate of interest, it would enable them to show a larger profit income than they have enjoyed before. Thus, in the case already mentioned such a society might advance £10,000 to pay off the mortgage, and charge, say, only 1 per cent. interest. The landlord's net profit income would then be £1,000 *less* £100 (interest at 1 per cent. on £10,000) instead of £1,000 *less* £500 (interest at 5 per cent. on £10,000), consequently he would have the difference (£400) capitalised at 3¾ per cent. instead of at 5 per cent., which would mean that, even under the arrangement suggested, the landlord's net profit income would, after sale, be £100 a year greater than his real net profit income had been previously. Again, the landlord's relatives or friends might arrange to pay off the whole of the mortgages, on the understanding that after the sale they should receive the

sum advanced, with or without interest. This would enable him to make practically the same profit as he would, if his entire net income were capitalised and if the charges were then redeemed out of the purchase money. XXII. *Continued.* Prices to be based on Net Profit Income.

179. This difficulty can be met by giving the Court full discretionary power to deal with such cases. Where mortgages or other charges have been paid off after the date on which any Act may be passed to give effect to these recommendations, and during the ten years previous to the date of the passing of the Board's resolution for the compulsory acquisition of the land in question, the Court should enquire into the circumstances of the case. If they consider that it was a *bona fide* transaction not made in contemplation of sale, nothing should be done to upset the effect of such redemption of charges, and no deduction should be made from the average net income received during the ten years, in respect of the interest payable on these charges before they were paid off. On the other hand, if the Court considered that a redemption was effected, merely in contemplation of an approaching sale, and was an arrangement which could not, or would not, have been otherwise made, the redemption should profit the landlord nothing. The case should be treated exactly as if the redemption had never taken place, that is, a deduction should be made from the average net income of the annual amount payable in respect of the charges, and the landlord should receive, in addition to the capitalised value of his net profit income thus ascertained, the amount of the charges which have been paid off.

180. We recognise that other difficulties may arise in working out this scheme, but we believe that they can all be met by giving the necessary discretionary power to the Court. Thus, the case of mortgages affecting two estates, one of which is being sold and the other of which is not being sold, might arise and might be complicated by questions of marshalling or tacking. These difficulties could however be dealt with by giving the Court the power of apportioning or exclusively charging mortgages, in the same way as the Land Commission deal, under voluntary sales, with quit and crown rents, tithe-rentcharges, head rents, &c.

181. There are other charges mainly terminable charges, running for a definite or indefinite period, for example a jointure, or an annuity, consisting partly of interest and partly of sinking fund, which is payable for the period required to amortise a capital sum, *e.g.*, a Board of Works loan. If a deduction were made from the net income in respect of such a charge, instead of making no deduction and causing the landlord to redeem it out of the purchase money, as at present, the State would then have to pay the person entitled to the charge, its redemption value, and also have to pay the landlord the present worth of a perpetual annuity, equal to the amount of the annual charge, beginning at whatever date the charge would expire. This procedure would be extremely complicated and might not result in any saving. Consequently, we do not recommend that any deduction should be made from the net income, in respect of these charges, or that any change should be made in the law or the practice, as regards the satisfying of these charges out of the purchase-money.

XXIII.—Objections urged against taking Net Profit Income as basis of Price.

182. Such a strict interpretation of net income as we recommend has been criticised, on the ground that it is not fair to deprive the landlord of the opportunity of making a profit by redeeming his mortgages, and that, under this scheme, an indulgent landlord who has given large remissions of rent, and is encumbered, perhaps in consequence thereof, will receive less than a landlord in possession of an estate of the same agricultural value who, owing to strictness in collecting his rental or other causes, is unencumbered. This criticism seems a little beside the point. The indulgent landlord is in point of fact in receipt of a smaller income than the strict landlord, whatever may be the

XXIII.—*Continued.*

Objections urged against taking net profit income as basis of price.

cause, and the object of our scheme is to prevent, as far as possible, anyone suffering financial loss as a result of compulsion. It is therefore aimed at securing to a landlord in the future, within certain limitations and subject to certain modifications, what he has had in the past, not what he might have had. If the arrears or the equity of redemption of the encumbered landlord are of any value, he will receive that value as fixed by the Court. Moreover, if any landlord considers the strict method of estimating net profit income unfair, he has always the option of not producing his net income returns, and so of having the fair price of his estate fixed by the Court, on the basis of valuation.

183. It was pointed out that two estates of the same agricultural value might, under this scheme, change hands at different prices, say, one at 24 years purchase of the estimated fair rent, and the other at 22 years purchase, in consequence of the saving effected by the State from the redemption of charges; and it was asked why should the tenants on one estate profit by their landlord's indebtedness and get their holdings cheaper than the tenants on the other estate. It may be sufficient to answer that under the voluntary scheme this inequality happens every day, since the prices asked by different landlords vary greatly, one of the reasons being that encumbered landlords are, as a rule, ready to sell at a price which would not tempt an unencumbered landlord; but the criticism seems founded on a misapprehension. The scheme suggested does not apply to direct sales but to purchases by the Board, and their terms of re-sale are not, and should not be, ruled merely by the prices they paid for each estate. On some estates all the money expended by the Board on improvements is recovered from the tenants in the shape of enhanced price, as these estates were bought cheap, and the annuity that can be safely charged will pay off both the purchase-money of the estate and the net expenditure on improvements. Where an estate is not bought cheap the Board often have to lose a large part of their expenditure on improvements, since they adhere to the rule of not charging the tenants more than the sum that would be repaid by an annuity less than the second term fair rent. Of course, if all prices rule high, the Board cannot do much in the way of improvement, since the average amount they can lose is, and must be, limited. In the first case mentioned above where the land cost the Board only 20 years' purchase they would probably be able to recover from the tenants most, if not all, of the cost of improvements they carried out. In the second case they would probably have to lose a large proportion of this expenditure, for if the land was of the same quality, there would generally be no difference between the re-sale price charged to the tenants on each estate.

184. While objections have been raised, by those in favour of net income being adopted as the basis of price, to the deduction of charges from that income and to the strict definition of net profit income that we suggest, objections have, on the other hand, been taken to the adoption of the system of basing price on net profit income, however strictly defined. The chief objection advanced is on the ground of the instability of incomes derived from land. It is said that the process suggested assumes that the future will be similar to the past, and that the average income enjoyed during the last ten years will remain unaltered. The objection has not been much pressed as regards tenanted land, having regard to the fact that second term rents are taken as the basis, but it has been urged that grazing rents derived from untenanted land, and farming profits made by a landlord, who farms his land himself, cannot be regarded as stable. The evidence we have received seems to show that there has been practically no change in grazing rents for the last five years, that during the last ten years there has been a slight decline, that during the last fifteen years the decline has been rather larger, and that there was a great fall about twenty years ago. If an income derived from land is unstable, allowance for that fact can be made in voluntary negotiations, but it is not easy for the State to insist upon the instability of an income derived from land acquired compulsorily, so far as the presumption of instability rests upon conjectures of what may happen in the future, and not upon the workings of existing economic causes. The method of assessing price suggested in this Report does, however, make allowances for the precariousness of an income due to the latter causes.

See paragraphs 160 and 187.

XXIII.—*Continued.*

Objections urged against taking net profit income as basis of price.

185. The extreme demand made by those who emphasise the instability of grazing rents is that a fair rent, such as can be paid by a solvent tenant, should be fixed on the untenanted land, and that that amount, subject to deductions, should be taken as the income to be capitalised, instead of the average annual income that had been actually received. The chief danger of this course is that the landlord's interest in untenanted land might be assessed as though it was tenanted, although his property is more valuable to him than if it were tenanted. This question has been complicated by a good deal of discussion as to "occupation interest," "tenant-right," and "the double interest." What seems quite clear is that second term rents are not a measure of the full annual value of untenanted land, wherein the landlord has the exclusive right to the property. In tenanted property, the landlord and the tenant are partners, and the greater the tenant's interest, the less, other things being equal, is the landlord's interest. Hence the landlord is entitled to be paid a greater sum for untenanted than for tenanted land. If the same measure of the value of the land is taken in both cases, *i.e.*, a fair rent, he should get a greater number of years' purchase of that measure for his untenanted than for his tenanted land. If that larger multiple would yield the landlord his net income, the effect of this plan would not differ from that of the plan we have suggested; if it did not yield his net income, it would have the effect of putting the landlord in a worse financial position than before compulsion was applied.

186. Others, who do go not so far, urge that the Court should have power to vary between the actual average income on the one hand and the fair rent on the other hand, and they argue that in this way "a fair price" could always be secured. This scheme, in common with most schemes that are not based upon net profit income, is indefinite and the effect of it would be uncertain, for a proposal to fix the price with reference to both the net income and the fair rent may mean anything. Either clear principles must be laid down upon which the Court should proceed, and we have not heard a principle suggested that is capable of legal interpretation, or indeed is more than an ethical platitude, or else the competing claims of "net income" and "fair rent" must be frankly left to the individual opinion of the Court and its valuers. In this case, the proposal would be open to an objection, which we regard as insuperable in the case of compulsory purchase, *i.e.*, it may destroy one of the conditions which govern our acceptance of the principle of compulsion, namely, that as a result of it no man should be put in a worse position financially than he was in before.

187. While we are in favour of the preservation of the net profit income, as defined above, there may be, as we have already indicated, further factors which must be taken into consideration. Where there is an economic or natural cause actually existing at the date of sale, which is likely in the next few years to make the income to be derived from land greater or less than it has been for the last ten years, such a cause should, we think, be taken into account. On the other hand, we do not think that allowance should be made for causes which do not exist, though they may be apprehended. Thus it seems to be purely speculative to say that the embargo on the importation of Canadian cattle may be removed, and that consequently grazing rents may be affected, or to say that protective duties may be imposed on foreign food-stuffs, and that therefore the profits on agriculture will rise. If, however, either of these contingencies should come to pass before any particular sale is effected, it should be within the competence of the Court, as we have already stated, to increase or reduce the price, that would otherwise be fixed, by such an amount as they think represents the capitalised value of the difference in the net income, which might arise during the next five years, from the operation of such existing economic causes, if no sale were to take place. Similarly allowance may be made for the operation of "natural causes," *e.g.*, where the value of the land may be diminished or increased by the operation of causes such as erosion or accretion. These must, of course, be exceptional cases. Again, it may happen that the landlord during some of the last ten years has been getting artificially inflated prices for part of his untenanted land, *e.g.*, through excessive meadowing or letting in conacre. As this would have to be paid for in the future, were

See paragraphs 160 and 184.

See paragraph 160.

XXIII.—*Continued.*

Objections urged against taking net profit income as basis of price.

no sale to take place, either by reduced receipts or by a large expenditure on fertilisers, so as to put the land in condition again, this factor should be taken into consideration by the Court. Hence the introduction of the words, "actual condition of the land itself" in our statement (in paragraph 160) of the principles which should govern the fixation of price.

188. Where the owner in fee does not let, under the eleven months' system or otherwise, the land which is to be acquired, but works it himself, and similarly where the land to be acquired is held and worked by a tenant-purchaser or tenant, a further deduction has to be made from the average net income in respect of the occupier's wages of superintendence, *i.e.*, the added return due to his own work upon the land, for which he would have been paid had he been acting as steward or manager for somebody else. In practice, however, it probably will be hard for anyone who is working the land himself to give satisfactory proof of his net profit income, and, even where the land is let regularly, it may, in some cases, be difficult to give the required particulars.

XXIV.—Other Points Connected with Price.

189. Where evidence of net profit income is not available, or is not complete, another method of fixing the price has to be devised, and there seems to be no alternative to the assessment by the Court of the full value of the interest to be acquired. The other method commonly suggested was that the valuation, as fixed for the purposes of imperial and local taxation, should in these cases be taken at the net income. It was pointed out that, in the case of tenanted land, the landlord is assessed for income tax under Schedule A upon the rental or upon the poor-law valuation *less* a deduction of one-eighth of the valuation. The occupier, where liable for income tax, is assessed under Schedule B, upon one-third of the valuation, and where the lands are used for the purpose of husbandry only, he may elect to pay, instead, under Schedule D, upon the average of his profits during the three preceding years, in the same manner as a trader, provided he gives the proper notice to the surveyor of taxes. As a matter of fact comparatively few occupiers of land in Ireland have elected to be assessed under Schedule D. Where an occupier of land for the purpose of husbandry only has paid income tax under Schedule B, and finds after the close of the year that his actual profits have fallen short of the amount on which he has paid income tax, he may prefer a farm appeal and claim relief by way of repayment. An owner-occupier of land is assessed to income tax under both Schedules A and B. From the poor law valuation he is granted a deduction of one-eighth of the valuation in making the assessment under Schedule A as provided by section 35 of the Finance Act, 1894, and he thus pays on seven-eighths of the valuation under Schedule A, and on one-third of the valuation under Schedule B. Thus an owner-occupier holding land of which the valuation is £100 has to pay income-tax on about £120. If an owner-occupier of land used for the purpose of husbandry only finds at the end of the year that he has not realised the amount on which he has paid income tax under Schedules A and B, it is open to him to prefer a farm appeal, and to seek relief by way of repayment. The Special Commissioners of Income Tax by whom such appeals are heard will, if satisfied with the accounts produced, determine the amount of the profits realised and authorise the repayment of any income tax found to have been paid in excess of the liability. As practically no owners of land in Ireland avail themselves of the privilege of being assessed on their profits, it was suggested that owner-occupiers always make from land valued at £100 at least about £120 a year.

190. We are unable to agree with the suggestion that one and one-third, or even one and one-fifth, times the valuation represents the owner's annual profit. The valuation cannot be considered to represent the present productivity of the land, and though an estimate of what the value was fifty years ago may serve as a rough and ready basis for assessing taxation, it is not suitable as a basis for determining price. Moreover, if the owner of untenanted land is in a position to prove his profits, he can under our scheme obtain full credit for that

amount, whereas if he cannot do so, this may be the reason why he does not claim the right of paying income-tax upon his profits rather than on the valuation. We are, therefore, of opinion that where the Board purchases land compulsorily, and where satisfactory evidence of net income is not available, the price to be paid shall be such as the Court may consider the full value of the interest to be acquired, having regard to all the circumstances of the case.

XXIV.—*Continued*, Other points connected with price.

191. We think compensation should be paid to the landlord for any sporting rights he enjoys, if such rights are acquired by the Board, and if it is shown that they are of value. If the landlord had been in the habit of letting these sporting rights for a term of years previous to sale, the average rents paid, less any expenses incurred in connection with the rights, would be a guide to the value. If the rights have not been let, the Court would have to take further evidence as to their value.

See paragraph 249.

XXV.—Rate of Interest to be obtained from authorised investments.

192. Having settled the method in which the average net profit income of the landlord is to be ascertained, and the other payments calculated, the rate of interest at which that income is to be capitalised has to be settled. Where a property sold is "settled land" the proceeds of the sale can be invested only in certain securities marked out by Acts of Parliament. Since 1903 the investments for the proceeds of settled land sold under the Purchase Acts are those previously available for trustees, and certain others mentioned in the 51st Section of the Act of 1903, provided that the sufficiency of such investments to realise the sum invested therein, upon the death of the tenant for life or the termination of the trust, shall be established to the satisfaction of the Public Trustee, appointed under that Act. This section is said by some to have dangerously extended the area of trustee investments, but the investments specified in the first five sub-heads (*a*) to (*e*) of that section are all analogous to previously existing trust investments, and many of them were already available for trustees. The remaining class mentioned in sub-head (*f*), namely, debentures or fully paid shares or stocks of any railway, which for the ten years immediately preceding the date of investment had paid a dividend on its ordinary shares, has been considered by the Irish Court of Appeal in *re* Blacker-Douglas' Trusts. They drew attention to the fact that ordinary shares or stock of a railway differ from most authorised securities, in the absence of a margin of security, and they gave such "weighty caution" to the Public Trustee that sub-head (*f*) has become largely inoperative. The wording of the clause, which was not in the original Bill, but was inserted in the House of Lords, came in for considerable criticism, especially the proviso giving a veto to the Public Trustee which was probably intended to refer only to sub-head (*f*), but, which, owing to the language used, also embraces sub-heads (*a*) to (*e*). Even if there were no objection to any of the securities specified in sub-head (*f*) being treated as trust securities, investments in ordinary fully paid shares or stocks would not be suitable for securing the net profit income, since they do not, as in the case with debenture stock, yield the same sum each year, but vary with the profits. Some suggestions have been made for further extensions of the area of investments for the purchase-money of land sold under the Purchase Acts, but we do not consider that we have sufficient evidence to justify us in making recommendations on this point.

[1905], 1 I. R. 532.

193. The authorised securities at present yield rates varying from 3 per cent. to 3¾ per cent. for a large number of well-known stocks, and higher for a smaller amount of other stocks, and there is much dispute as to the average rate obtainable. The Land Conference suggested 3 per cent. or 3¼ per cent. as the rate, and the Irish Landowners' Convention have expressed their willingness to have the rate taken as 3½ per cent. The tenants' representatives say, "Why calculate at 3½ per cent. when 3¾ per cent., 4 per cent., and 4¼ per cent. or more, can be obtained from investments in authorised securities?" The landlords answer, first, that rates higher than 3½ per cent. can be secured only, if

V. Q. 25032.

XXV.—*Continued.*

Rate of interest to be obtained from authorized investments

at all, from investments in dangerous securities, and, secondly, that such rates can be obtained only by buying at the psychological moment, and then are obtainable for small amounts only. It would be impossible for the Commission, or even for Parliament, to lay down what average rate can be at any moment secured, since different securities yield different rates, and no one could fix a rate that would be sure of being even approximately accurate for a term of years. Ten years ago the rate of yield from Consols was about 2½ per cent.; recently it has been about 3 per cent., and other securities have varied even more. It is, however, essential for the working of our scheme that the highest rate that can be obtained from authorised securities should be procured, and with that object the following plan has been devised.

194. At the beginning of each year the sum to be available for land purchase by the Congested Districts Board—say £1,000,000—should be paid over to the National Debt Commissioners, and invested by them, as opportunity offers, in such authorised securities as yield the highest rate of interest, and are in their opinion suitable for investment. When the net income of a landlord has been settled the Commissioners would, on the order of the Court, pay over to the trustees of the vendor sufficient of one or more of the stocks purchased by them to yield his net income. The stocks transferred would be so arranged that their average yield would correspond with the average yield obtained by the National Debt Commissioners. If the trustees did not like the stocks, they could sell and re-invest in any other authorised security. If they did so, however, they would probably diminish the net income, since *ex hypothesi*, the Commissioners had invested in the stock that yielded the highest rate of interest. The proportion of dividends accruing on the stocks held, between the date on which they were purchased and the date on which they were handed over to the landlord, would pay the interest on the £1,000,000 and also the expenses of working the scheme. That part of the price of the estate which would consist of the money required to pay off charges, &c., and the whole of the price where net income returns were not available, and where consequently the price had to be fixed by valuation, would be paid in cash. If the estate was not settled land, the owner would be paid in cash such a sum as would produce his net profit income if invested at the rate which is the average yield of the securities held by the National Debt Commissioners.

195. Two notable advantages would, it seems to us, accrue from the adoption of some such scheme as that outlined. In the first place, it would do away with disputes as to what was a fair rate of interest at which to capitalise the net profit income, and secondly, the rate obtained would probably be higher than could be otherwise got, since the Commissioners, watching the market, could buy at the most favourable moments.

XXVI.—Court to settle Questions arising out of Compulsion.

196. It remains to consider what Court should settle all points connected with the compulsory acquisition of land, including price. In the matter of price the duties would be as follows:—

(1.) Ascertain gross income. (See paragraphs 161–3.)

(2.) Scale down non-judicial and first term rents. (See paragraph 164.)

(3.) Deduct average law costs, and costs of collection over a period of fifteen years. (See paragraph 165.)

(4.) Deduct continuing and varying charges that cannot be redeemed, on average of ten years. (See paragraph 166.)

(5.) Deduct charges which landlord cannot usually redeem at will, quit and crown rents, head rents, tithe rents, &c. (See paragraphs 167–70.)

(6.) Deduct charges in respect of mortgages, &c. (See paragraphs 171–80.)

(7.) Deduct or add amount, if any, by which future income would be reduced or increased in consequence of existing economic or natural causes and (in the case of untenanted land) in consequence of the actual condition of the land (See paragraph 187.)

XXVI.—*Continued.*

Court to settle questions arising out of compulsion.

It will also have to assess certain capital payments :—

(1.) Arrears, if of value. (See paragraphs 162-3.)

(2.) Redemption price of charges mentioned in (5) above. (See paragraphs 167-70.)

(3.) Amounts due on mortgages, &c. (See paragraphs 171-2.)

(4.) Value of equity of redemption, if any. (See paragraphs 173-9.)

(5.) Compensation, if any, for sporting rights. (See paragraph 191.)

Where the net income returns are not available the Court would have to assess the value of the interest to be acquired, having regard to all the circumstances of the case.

197. After full consideration, we have come to the conclusion that there should be a Court of first instance and a Court of Appeal. If there is only one Court, it must, in our opinion, consist of a person having the status of a Judge of the High Court, while if there are two Courts, the Court of Appeal must be of a similar character. The work involved, as set out above, would mean a serious addition to the present work of any High Court Judge, though it is mostly a matter of examining into certain detailed questions of fact, and could be safely discharged by a less important judicial personage if there was a right of appeal to a higher Court. Therefore we are in favour of having two Courts, and we suggest that the Court of first instance should be one of the present Legal Sub-Commissioners of the Land Commission, assisted by two lay assessors. Many of the matters that will come before the Court will be matters of account, and we therefore suggest that one of the assessors should be an accountant. As regards the higher Court, we are of opinion that its duties are more analogous to those discharged by the Judicial Commissioner of the Land Commission, than to those of any other Court, and we are therefore in favour of all appeals being heard by him, as they are under the Evicted Tenants Act. Should this be for any cause impracticable, it will remain for Parliament to create a tribunal that will possess the necessary judicial character, and will command public confidence. As will be seen later, the Court of first instance suggested is the Court that at present has to settle most of the questions arising out of the acquisition of tenants' interests.

XXVII.—Powers to be exercised over lands held by Tenant-Purchasers and Tenants.

Paragraph 117.

198. We have recommended that the Board should be empowered to acquire, by compulsion, if necessary, for the enlargement of small holdings, not only lands held by landlords but also the interest of tenant-purchasers and tenants in any non-residential farm, unless it is *bona fide* worked in conjunction with a residential holding by a man whose chief occupation is farming, and also the excess of any holding or holdings held by one tenant-purchaser or tenant above £100 valuation. It will also, probably, be necessary to give the Board certain powers over turf bogs. We have been impressed with the importance of making provision for the regulation of turbary as, owing to the absence of satisfactory arrangements in this respect in the past, there is great danger that many occupiers will in the near future be without an adequate supply of fuel. Satisfactory control will probably involve, not only interference with bogs on estates bought by the Board, but also with turbary rights possessed in connection with holdings already bought under the Land Purchase Acts. The matter is somewhat complicated, and no doubt before any legislation is introduced the opinion of the Land Commission and of the Board's officers will be carefully considered by the Government. The acquisition of holdings held by tenant-purchasers presents no special

XXVII.—*Continued.*

difficulty. The price should be settled in the same manner and by the same Court as for a landlord who is farming his own land, *i.e.*, on the basis of net income where the necessary information is available, and where it is not, on the basis of valuation.

Powers to be exercised over lands held by tenant-purchasers and tenants.

199. The powers necessary to enable the Board, satisfactorily, to deal with tenancy interests require special consideration. We have proposed that the Board, when re-selling or re-arranging an estate, or any part thereof, should have full power to determine any tenancy, or to vary the boundaries of any holding, if, in their opinion, it is necessary for the relief of congestion, provided that any tenant so disturbed shall be given a holding of not less value than the one from which he has been removed, or, at his option, compensation, assessed by the Court, for the holding, or the part thereof, taken. We are also of opinion that the Board should be given the power, at present possessed by the Estates Commissioners and the Land Judge, of declaring certain recalcitrant tenants on an estate purchasers of their holdings. The Board at present has to provide out of its own funds the money necessary for the purchase of tenancy interests. We recommend that they should be empowered to obtain advances in future from the Land Commission for the purchase of these interests in the same way as they do for the purchase of the fee. The value of tenancy interests varies according to the nature of the tenure, and the existing law contains special provisions for assessing their value.

3 Ed. VII., c. 37, sect. 19.
59 & 60 Vic., c. 47, sect. 40 (1).

1. Ed. VII., c. 34.

200. It is important to note that the Board have already certain powers over holdings on estates which they have purchased. Under the Congested Districts Board Act, 1901, the Board can, on a request from three-fourths (in number and valuation) of the tenants on an estate, determine any particular tenancy, but they must offer in exchange a holding, in the neighbourhood, of not less value and subject to a rent not greater than that of the old holding. The tenant can appeal to the County Court, who may award him money in addition to the new holding, or, in the alternative, the full money value of his interest in the old holding. In practice these powers have been found illusory, owing to the difficulty of getting the request signed by three-quarters of the tenants. Thus, on the Dillon Estate it would have been necessary to get a request signed by over 3,000 tenants in order to move one man, of whom most of them had never heard, and in whose migration most of them could have no interest. By section 82, sub-section (1), of the 1903 Act the Board were given power to act on a request signed by three-fourths of the tenants on any townland that would be affected by the exercise of these powers. In practice, however, the Board has not found it possible to obtain even this limited number of signatures, except, recently, in one somewhat exceptional case, and it was suggested that they should be empowered to act on their own initiative.

201. It is possible that the Board might in some cases have succeeded in putting section 82 (1) into operation, but they have not thought it generally worth making the attempt, because the County Court procedure under the Act of 1901 and section 82 (1) of the 1903 Act is cumbersome and costly, and because they could generally effect their purpose in other ways, namely, by exercising their powers of (*a*) resumption, (*b*) pre-emption, or (*c*) issuing a notice to quit.

(*a.*) The Land Act of 1881 precluded a landlord from compelling any tenant (to whom the Act applied) to quit his holding during the continuance of a statutory term, except for breach of certain statutory conditions. The landlord may, however (under section 5), with the consent of the Land Commission resume possession of the tenant's holding for certain purposes, on the payment of full compensation to the tenant. Up to 31st March, 1907, 156 applications had been made by landlords to resume, of which 112 had been dismissed, withdrawn, or struck out, 23 granted, and 21 were then pending. "Full Compensation" has been judicially decided to mean the full competition price that the holding, subject to a fair rent, would fetch in the open market. The Board on

purchasing an estate becomes clothed with this, as with other powers of a landlord, and section 83 of the 1903 Act authorised them to resume possession for the purpose of migration and the enlargement of holdings, in addition to the purposes specified in the Act of 1881. XXVII.—*Continued.*

Powers to be exercised over lands held by tenant-purchasers and tenants.

(*b.*) Where a tenant proposes to sell his holding, the landlord has a right of pre-emption at such a sum as may be agreed upon, or, in the event of disagreement, may be ascertained by the Court to be the true value thereof. The true value appears to be something less than the full compensation awarded in a case of resumption, and it has been said that the relation between the true value which the landlord must pay on pre-emption, and the full price which the tenant might get in the open market, is very similar to that which exists between the fair rent, which the Land Commission fixes, and the competition rent, which the landlord is no longer at liberty to exact.

(*c.*) Where no statutory term has been created, *i.e.* in some cases of present tenancies, and in most cases of future tenancies, the landlord (and the Board in the case of a purchased estate) can determine a tenancy by a notice to quit. The tenant is entitled to compensation for his improvements, if any, and to compensation for disturbance, and the latter may amount to a sum equal to seven times his rent if that is less than £30 a year.

202. The Board have acquired the tenants' interest in about 100 holdings, generally by voluntary agreement, but of course the Board had in nearly all these cases the above-mentioned powers in the background, and the price paid has generally approximated to the price that would be paid if the Board were forced to exercise their powers. The powers at present possessed by the Board, however, are inadequate for the following reasons :— XL. p. 47

(1.) There are some tenants whose tenancies cannot be determined—*e.g.*, those not liable to a notice to quit before 1881, and not liable to have their holdings resumed under the Act of that year, as a statutory term has not been created.

(2.) The procedure is not convenient, as a notice to quit means a delay of at least one year, generally longer.

(3.) The Board are not in a position to offer a tenant, who has been served with a notice to quit, or whose holding has been resumed, the choice of taking an alternative holding elsewhere, instead of a sum of money, as they could have done under the Acts of 1901 and 1903, had it been found possible to work these powers satisfactorily.

(4.) The Board possess at present no powers of compulsorily changing the boundaries of a holding, nor can they re-arrange a holding except with the consent of a tenant. Thus, one tenant, whose holding is in scattered plots, can stand in the way of the re-arrangement of a large block of land, and the Board have no remedy except to resume possession or to issue a notice to quit, if they have these powers over the holding in question.

203. It is therefore recommended that the Board should be empowered, failing agreement, compulsorily to determine the tenancy in any holding on an estate purchased by them, on passing a resolution that it is desirable to acquire the whole or any part of the holding for the relief of congestion, or to re-arrange boundaries, or to stripe a holding. Two cases arise, of the acquisition of the whole or part of a holding :—

(1.) Where the tenant occupies a residential holding which does not exceed £100 valuation. The object of giving the Board powers in this case is to facilitate striping and re-arrangement of holdings or the enlargement thereof by the migration of the tenant in question. If the Board and the tenant cannot come to a friendly arrangement, then they should be bound, as they are under the 1901 Act, to offer an alternative holding, at least as valuable in every way as the original holding, and the Court should have the same power as the County Court now has of ordering

XXVII.—*Continued.* **Powers to be exercised over lands held by tenant purchasers and tenants.**

the Board to make improvements on the new holding, or to pay compensation to the tenant if the Court considers the new holding not good enough. The tenant should have the right to refuse the new holding and demand a money payment instead. In such a case, unless the tenant can give satisfactory proofs of his net income during the last ten years, the Court should assess the amount payable according to the present system where the present law applies. Where the tenant could at present be served with a notice to quit, he should be awarded compensation for disturbance and compensation for improvements, if so entitled. Where the holding could be resumed, the tenant should get "full compensation," which, as already mentioned, has been judicially interpreted to mean the competition price that the holding, subject to a fair rent, would fetch in open market. Where at present the tenant is not liable to have his holding resumed, or to be served with a notice to quit, *e.g.*, a leaseholder not affected by the Land Acts, the Court should settle what is the proper compensation to pay, having regard to the sums that would be payable if the holding could be resumed, or if the tenant could be served with a notice to quit, and to the nature of the tenant's interest in the holding, for example, the unexpired term of a lease and its conditions, &c.

See paragraph 201 (*a*).

(2.) The second case is where a tenant has one or more holdings, all non-residential, or where non-residential holdings are not worked *bona fide* in connection with a residential holding, by a man whose chief occupation is farming. Here the object is to secure land for the enlargement of small holdings. It is proposed that the Board should have power to take by compulsion, if necessary, only the excess or part of the excess of the holding above the limit of £100 valuation, but the tenant should in such a case be empowered to insist on all or none being taken. The Board should be at liberty to offer the tenant an alternative holding elsewhere of equal value, but they should not be bound to do so, as they should be in the first case mentioned. To force the Board to do so would nullify the object of giving them power to scale down large holdings, *i.e.*, to increase the amount of land available for the relief of congestion, but giving the Board the power of offering an alternative holding might in some cases be useful. The tenant could of course refuse the alternative holding and, failing agreement with the Board, the Court, as before, in the absence of proof of net income, should assess the money payable on the principle detailed in the first case. The Court should be empowered to add such sum, if any, as it considers represents any special value that the portion taken away might have had for the tenant by reason of its being worked in conjunction with the part left.

204. We think that the compensation to be paid by the Board in either of these cases, and any payable in the case of the compulsory re-settlement or re-arrangement of a holding, should be assessed by the same Court as that which we have recommended to deal with questions arising out of the compulsory acquisition of the interest of a landlord or tenant purchaser, namely a Sub-Commission Court, with an appeal to the Judicial Commissioner. These are the Courts which deal with questions arising out of the pre-emption or resumption of a holding under the present law; whilst the compensation payable in consequence of a notice to quit is assessed by the Civil Bill Court (that is the County Court), which, it may be noted, has concurrent jurisdiction with the Sub-Commission Courts in the fixation of rents.

205. As our recommendations involve great changes in the powers and methods of acquiring land, we think it advisable to describe the procedure that we suggest should be adopted—which we have in part already outlined—both because the administrative changes will illustrate our substantive proposals, and because these must largely depend for their success upon the provision of a suitable and congruous machinery. As, however, the matter is somewhat technical, our adherence to these proposals is more qualified than our advocacy of the substantive recommendations. For this reason, and for purposes of general convenience, we have thought it better to embody our suggestions in the separate note, which is printed at the end of our report. (See p. 117).

See paragraphs 152–7 and 198–204.

XXVIII.—Costs of Sale.

206. There is, however, one matter in connection with procedure which may be mentioned here, namely, that, as has been already mentioned, all costs and expenses necessarily and properly incurred by vendors and chargeants, etc. (in the case of lands bought compulsorily), in ascertaining title to the land, or to claims thereon, and in the assessment and distribution of the purchase money, should be treated as such costs are now treated in the case of land taken compulsorily under the Evicted Tenants Act (section 5, sub-section 3), that is, paid as part of the expenses of the Land Commission out of money voted by Parliament for the purpose. All costs incurred in the Court of first instance should be paid, and those incurred in consequence of an appeal should be similarly paid, unless disallowed by the Court.

See paragraph 165.

7 Ed. VII., c. 5.

XXIX.—Treatment of uneconomic Holdings already vested in Tenant Purchasers.

207. In dealing with the size of the land problem we drew attention to the fact that within the Board's new area over 39,000 holdings (about 20 per cent. of the total number) had already been vested in tenant purchasers, of which it was estimated two-thirds were under £10 valuation. Many of these holdings are still uneconomic and some are in rundale, and it would be desirable for the Board to improve as many of them as possible; but, as has been already mentioned, it is much more difficult to deal with these cases of what may be called "vested congestion," than with cases unaffected by the Land Purchase Acts.

See paragraph 112 (2).

208. While there is no doubt that the number of holdings under £10 valuation requiring treatment by the Board is proportionately less, in the case of purchased holdings than in that of other holdings,* still there are a considerable number of purchased holdings which it would be desirable to improve. Where the objection to the holding is that it is too small, and the Board has untenanted land in the immediate neighbourhood, the procedure is the comparatively simple one of amalgamation, *i.e.*, of adding to the purchased holding an additional parcel. It is desirable that this additional parcel and the holding already purchased should be treated as one holding. Otherwise the tenant purchaser would be free to sell one and keep the other, and then there would be two uneconomic holdings, where there should be only one economic holding. Therefore in such cases, an account should be taken of the amount outstanding on the old holding, and a new vesting order or land certificate issued treating the original holding and the additional parcel as one holding, subject to one annuity in respect of the amount outstanding and the new advance, as is provided in section 2 of the Purchase of Land (Ireland) (No. 2) Act, 1901. We are advised that, under the present law, the tenant purchaser, who is to get an enlargement, must not be the tenant of the additional parcel which he proposes to purchase. The Board have been therefore forced to make such a tenant purchaser sign a grazing contract, in respect of the additional parcel, or else to leave that parcel wholly untenanted until the purchase is completed. If this view of the law is adhered to, further legislation will be necessary.

1 Ed. VII., c. 30

209. The procedure is much more difficult where, as the result of sales under the Land Purchase Acts, a group of holdings have been vested in tenants consisting of rundale holdings or intermixed plots. At present, the Board has to obtain the consent of all the tenants, redeem the land purchase annuity, and, generally, buy the purchasers' interest, then re-settle the holdings and proceed to re-sell the new holdings. In view of the difficulties attendant on this process,

* The reason has been already referred to: many of these holdings have been improved by the Board and the Estates Commissioners before sale, and in any case practically all these men are better off than tenants holding farms of the same valuation, for they have for a certain number of years been paying a terminable annuity, which is less than the rent of a tenant of a corresponding holding which has not been sold, and they have for a varying period enjoyed the advantages arising out of "the magic of property."

XXIX.—*Continued.* Treatment of uneconomic holdings already vested in tenant purchasers,

it has been suggested that the Board should be given as regards purchasers of uneconomic holdings sold under the Land Purchase Acts, the same powers of re-settlement as we have recommended in respect of tenants on estates bought by the Board, but the matter is attended with many difficulties, and there are technical complications, which will require careful consideration before any attempt can be made to simplify the matter by legislation.

XXX.—Treatment of Pending Cases.

210. In addition to holdings that are already vested, there are, within the Board's new area, a large number, over 28,000, of pending cases, *i.e.* cases where agreements between landlords and tenants or landlords and the Estates Commissioners have already been entered into for the transfer of the holdings, though advances had not been made up to the end of last year. Many of these cases will be vested before legislation on this subject can be passed; on the other hand many new agreements may, in the same period, be entered into in respect of holdings, at present, unaffected by the Purchase Acts. The number may largely increase during the next few months, as it is said that some owners apprehend a reduction in the rate of the bonus as from the 1st November next. Moreover, the fact that the Board are at present restrained from further purchases has the tendency of increasing the number of sales, within their area, from landlord to tenant direct, or from the landlords to the Estates Commissioners. Any increase in the number of "vested" or "pending" cases will increase the Board's difficulties, but there does not seem to be any practical way of checking advances or the lodgment of agreements, before the passing of an Act of Parliament. It has been suggested that the Lord Lieutenant should issue regulations under section 23 (8) restraining the Estates Commissioners from making advances or receiving purchase agreements, or arranging to buy land under sections 6, 7 and 8, but it does not seem that such regulations would be legal for the reasons mentioned in the judgments delivered in the case of the estate of Downes Martin, when the regulations of 4th July, 1905, were under consideration. Though, apparently, nothing can be done to stop the creation of vested congestion in the interval, a method of dealing with pending cases may be devised.

See 3 Ed. VII., c. 37, sect. 48 (3).

See paragraph 55.

40 Ir.L.T.R., 133.

211. The cases that will be pending at the date of the creation of the new Board within their area may be considered under two heads:—(1) Cases of direct sale, and (2) cases of sales under sections 6, 7, and 8. It is desirable to avoid interference with existing agreements between landlords and tenants as much as possible, but greater interference may be possible where the property has not been declared an estate than where it has. The difference is that in the former case the contract between landlord and tenant is incomplete, and conditional upon the declaration of the property to be an estate, while in the latter case, owing to the declaration, the contract is complete.

212. Under the procedure of the Estates Commissioners there has hitherto been practically no interval between the "declaration" and the "vesting," and it has not been the practice of the Commissioners to declare a property an estate (except provisionally) until they have completed all inquiries, and are ready to advance the purchase-money and vest the lands. Hence, practically all the cases now pending which are not vested when the new Board comes into existence, will be cases where the property has not been declared an estate, and the suggestion now made for dealing with the difficulty is as follows.*

See 42 Ir.L.T.R. 35, and also 42 Ir.L.T. p. 83.

* Since we originally agreed to these proposals, the practice of the Estates Commissioners in the matter of declaring a property an estate has been considered by the Court of Appeal, in the case of Weir's estate, and we understand that the legality of the present procedure in certain respects was called into question. As, however, we have no materials for estimating the precise changes that will have to be made in the present practice, it is impossible for us to revise our recommendations, which were based on the existing practice. Probably before the new Board can come into operation the new practice will be settled, and the consequential modifications required in our recommendations will be obvious.

XXX.—*Continued* Treatment of pending sales.

At present, after the Estates Commissioners have inspected a property, they intimate to the vendor that they are prepared to make the declaration or that they are not. In the latter case they sometimes state that they are unable to declare the property an estate, unless the vendor varies the contracts in certain cases or unless certain holdings are excluded. If he agrees the sales go through: if not, they fall to the ground. The Estates Commissioners more frequently intimate that, though they cannot declare the property to be an estate, they will consider the question of buying it under section 6 if the vendor invites them so to do.

213. We suggest that the Estates Commissioners should after the creation of the new Board send that body a copy of their inspector's report upon any estate within the Board's area, negotiations for the sale of which are pending, as soon as it has been inspected, and also a statement of their intention as to the declaration. If the Estates Commissioners proposed to declare the property an estate, the Board should be given, say, a month to consider whether they would intervene. If they decide to do so, they should be declared the purchasers at the price which was agreed upon by the vendor with his tenants, and they should be obliged to re-sell to any tenant who wished to buy his holding, in the state in which, and at the price at which, he agreed to buy it from the landlord. This would mean that the Board's intervention would be only a technical interference with the existing rights of the landlord and the tenant for the former would get exactly what he bargained for, and the latter could insist upon the same. It may be urged that a tenant whose holding needed improvement or re-arrangement might insist upon the sale going through, but it would be against his own interest to do this, and, if he were so foolish, it would seem to be undesirable to use coercion in order to benefit him. At the worst, the holding may subsequently be dealt with as a case of "vested congestion."

See paragraphs 207–9

214. There is probably only one class of tenant who as a general rule would refuse to accept the interference of the Board, namely, the tenant of a large holding, part of which the Board wish to acquire for re-distribution. It is suggested that the difficulty of such cases might, in part, be met by the Act prohibiting advances in future being made, within the Board's area, for a sum greater than £3,000, which was the original maximum advance under the earlier Land Purchase Acts. If the tenant brought in cash for the difference between the agreed price and £3,000, or if the landlord allowed the difference to remain out on mortgage on the holding (as sometimes happened under previous Acts, where the Land Commission refused to advance the whole of the agreed price of the holding), the sale would go through, If the Board wished to acquire part of the holding, they would then have to deal with it in the same way as they will have to deal with any other vested holding, part of which they find it necessary to acquire. Whilst the course suggested for such a case involves a certain interference with what would be a right of the tenant if no change is made in the law, it is an interference for which much can be said. The different limits imposed by successive Land Acts, upon the amount of money to be advanced to any one purchaser, shows that the advantages of State credit were not intended to be used for, at any rate, the largest holdings, and there are special reasons for thinking that the limit is at present too high, at any rate so long as the present system of land purchase finance continues. If a man buys his holding for £3,000, and if guaranteed 2¾ per cent. stock is issued at about £85 per cent., as it was on the occasion of the last issue in October, 1907, it is necessary, in order to get this amount of cash, to issue stock to the amount of over £3,500, and the payments the tenant makes are sufficient to pay off only £3,000 stock (worth about £2,570), and the remaining stock (over £500 in amount, being the excess stock issued) has to be paid off out of Irish public funds (the Ireland Development Grant) or county rates.

215. If the Estates Commissioners did not propose to declare the property an estate, then the proceedings for direct sale would fall through, as they do at

XXX.—*Continued.*

Treatment of pending cases.

present; the only difference being that the vendor could not then offer the estate to the Commissioners under section 6, as he could at present; he would have to offer it to the Congested Districts Board, or not sell it.

216. As regards the second class of pending cases, *i.e.* those where the Estates Commissioners have agreed to buy under sections 6, 7, and 8, the objections against allowing the proceedings to be completed is not that holdings now in rundale or uneconomic holdings will be vested in a condition in which the Congested Districts Board would not re-sell them. The objection is that to allow the Estates Commissioners to go on completing re-sales would involve, for a year or two, the evil which has been so much dwelt upon, namely, that of two bodies buying and dealing with land, on somewhat different methods and with somewhat different aims, within the same area. Moreover, the fact that the Board is, at present, precluded from buying any more land is said to be causing a considerable amount of untenanted land, within the Board's new area, to be offered to the Estates Commissioners, and if this is bought and re-distributed by them the Board will be handicapped in the future in carrying out large plans of re-settlement. At the same time it is undesirable to interfere overmuch with existing agreements. Accordingly we recommend that where the Commissioners have started the work of improvement they should complete it, but that where they have not done so they should hand all the land over to the Congested Districts Board, who should be placed in the same position as regards the tenants on these estates that the Estates Commissioners previously occupied. It might be possible for the Irish Government, in agreement with the Estates Commissioners, to arrange that, between the date of the decision of the Government to introduce legislation and the date on which the bill pass into law, the Estates Commissioners should not, in the absence of special circumstances, enter into fresh negotiations for buying more land under sections 6, 7 and 8 within the Board's area. It would appear perfectly legal for the Commissioners to agree to this abstention, though it might not be legal for the Government to attempt to compel them to postpone dealing with any particular estates.

See paragraph 55.

XXXI.—Question of Evicted Tenants.

217. A question as to the re-settlement of evicted tenants naturally arises out of our recommendations that the Board should have exclusive land purchase jurisdiction in the area assigned to it. The Evicted Tenants Act of last year imposed upon the Estates Commissioners the responsibility of dealing with these tenants throughout the whole of Ireland, and gave them, within certain limits, power to acquire land compulsorily. It seems necessary to consider how far, if at all, these provisions require amendment in view of our proposals. The Estates Commissioners issued a special report upon their proceedings up to the 31st May last (Cd. 3570-1907), in respect of the restoration of evicted tenants. It was there stated that within the area proposed for the Board 2,977 evicted tenants or their representatives had applied for re-instatement, of whom 295 had been restored by the landlord to their former holdings or to new holdings, and that 52 had similarly been restored by the Estates Commissioners. Moreover, the names of 645 evicted tenants or their representatives had then been noted as suitable persons to be provided with land, whilst 1,057 applications had been rejected by the Commissioners for various reasons. This left 928 cases at the 31st May last not reported on. Since that date these applications have been investigated and the Commissioners have selected the cases which they considered suitable for restoration, but these rulings are not final, and particular cases may be re-considered on further information.

See paragraphs 101 and 152.

7 Ed. VII., c. 56.

218. It seems quite clear that it would not be desirable that the Board should be given a concurrent jurisdiction with the Estates Commissioners, still less an appellate jurisdiction, as regards the claims of evicted tenants, which should be settled exclusively by the latter body. It probably would, however, be desirable to request the Estates Commissioners, in dealing with evicted tenants, to give priority to those whose former

holdings were within the Board's area, especially in the matter of finally deciding upon the claims submitted. The question remains as to what should be done as regards any evicted tenants (including their representatives) whose claims, though approved, have not actually been met on the date on which the new Board may come into existence. Where the Estates Commissioners have entered into negotiations with any evicted tenant to provide him with a particular holding, they should, we think, have power to complete these arrangements. Where the tenant was evicted from a holding within the Board's area, and the Estates Commissioners have merely decided that he is suitable for reinstatement, but have not actually taken steps to provide him with a specific holding, it should be the duty of the Board to do so, and the necessary funds should be provided, in the same way as they are, at present, where the Estates Commissioners do the work. Hence, after the new Board comes into existence, there would be no necessity for the Estates Commissioners to exercise their power of acquiring land, compulsorily or otherwise, within the Board's area, for the purpose of restoring evicted tenants, though they will complete the carrying out of any re-settlement that they may have started.

XXXI.—*Continued.* Question of evicted tenants

See 7, Ed. VII., c. 56.

XXXII.—Direct Sales to be allowed only on Certificate of Board.

219. Even in the present scheduled districts there are some estates which do not need treatment by the Board, and which might safely pass direct from landlord to tenant, either because there are no uneconomic holdings, or because they are few, and do not really require enlargement on account of their situation and the circumstances of the holders. Thus on an estate where there are, say, 100 holdings, if there were 10 uneconomic holdings clustered together, it probably would be desirable to enlarge them, if possible. If, however, these 10 small holdings were scattered over the estate, it might be unnecessary to enlarge them, as the occupiers might really be labourers with allotments who found a market for their labour on the adjoining large holdings. Again, there may be an estate which the Board cannot usefully treat, owing to absence of facilities, disinclination to migrate, &c. In the portion of the Board's new area not at present scheduled there must be a greater number of estates on which there is no congestion, or on which the congestion is practically negligible, than in the area at present assigned to the Board.

220. To enable these estates to pass by direct sale would be desirable, and it is recommended that in such cases the Board should be empowered to issue a certificate to this effect. The procedure we suggest is that, when a landlord applies for such a certificate, one of the Board's inspectors should go over the estate, and if the Board on his report decide that a certificate may issue, the landlords and the tenants should be free to negotiate, as they at present do, and be allowed to effect a direct sale in precisely the same way as a direct sale is carried out in any other part of Ireland. If, on the other hand, the tenants on such an estate ask the Board to buy, and their inspector reports that it is not suitable for treatment, the Board should tell them that the estate can pass by direct sale. If the landlord refused to sell to the tenants, they would then be in no worse position than tenants in any other part of Ireland where the landlord refuses to sell.

221. There will, however, probably be more estates, of which only a part may require treatment by the Board. It was suggested that they should issue a certificate as regards the portion that does not require treatment, and that they themselves should buy the portion that does require treatment. It was also suggested that the certificate should never issue unless the landlord and the Board came to terms about the part that needed treatment and the landlord and tenant came to terms about the rest. The sale of the two portions would thus be concurrent. It was pointed out, however, that difficulties might arise under this procedure. The landlord might be willing to sell on reasonable terms the part that did not require treatment, but might ask an excessive price for the part that required treatment, or *vice*

XXXII.—*Continued.*

Direct sales to be allowed only on certificate of Board.

versa. It was also pointed out that if the Board proposed to improve the condition of portion of the estate, the tenants on the other portion might not be willing to purchase their holding from the landlord in an unimproved condition. The difficulties that might occur seem to require careful consideration. Three cases might arise: (1) The landlord might approach the Board. (2) The tenants might approach the Board. (3) The Board might act on their own initiative.

(1.) If the landlord asked whether the Board were willing to certify the whole or part of an estate for sale direct to the tenants, the Board would have to make an inspection, and then say to the landlord, "Part A, we consider needs treatment by us, part B does not. If you can negotiate with your tenants we will be willing to issue a certificate as regards B, and will buy A from you ourselves for £*x*." If the landlord accepted the price offered for A, and if he succeeded in negotiating with his tenants, the Board would certify that B was suitable for direct sale and would buy A themselves. The tenants on B would be no more liable to be asked excessive prices than tenants anywhere else in Ireland. If the landlord succeeded in negotiating with his tenants, but was not satisfied with the price offered for A, he might be allowed to appeal to the Court to settle the price, as if the Board had proposed to acquire A compulsorily. This would not seem unfair to the Board. They, having declared that it needed treatment, must ultimately acquire it on compulsory terms, in default of agreement with the landlord. If the landlord, though willing to accept the Board's offer for A, fails to come to terms with the tenant as regards B, then the Board might make an offer to the landlord for the whole estate, as the Estates Commissioners do under Section 6, *i.e.*, they might obtain from the tenants whose holdings they did not propose to treat, undertakings to buy at a price corresponding to what they were offering the landlord. If the terms were accepted, the Board could at once re-sell the portion that did not require treatment, and proceed to re-settle the portion that did require treatment. If the offer were refused the negotiations would break down.

(2.) If the tenants asked the Board to buy, they would have to get permission from the landlord to make an inspection. If he refused, the negotiations would fail unless it was decided to apply compulsion. If the landlord consented, and, if on making an inspection, the Board came to the conclusion that a large number of holdings might pass without treatment, they would inform the landlord that they were willing to offer £*x* for the part that needed treatment (A), and to issue a certificate for the remainder (B) in case he arranged terms with the tenants. If he accepted and if he arranged terms with the tenants on B, the sale would go through as before. If the landlord agreed to the Board's price for A, but failed to come to terms with the tenants on B, or *vice versa*, the procedure indicated above might be followed.

(3.) If the Board took the initiative, and the landlord consented to inspection, they would base their offer upon the undertakings that the tenants whose holdings they did not purpose to treat were willing to enter into, and on what they thought was the proper price for the balance; if the offer was accepted things would go through as before.

222. If the Board and the tenants failed to come to terms with the landlord, it would be open to the Board to exercise compulsion, provided that the tenants, or a certain proportion of them, undertook to re-buy on the terms at which the Board may have to buy from the landlord under the compulsory scheme.

223. The following points may be noted in connection with the foregoing:—

(*a*.) The inducement to the tenants whose holdings were not being improved to buy would be the advantage of speedy sale (since their holdings would not be kept on hands for two or three years), and the prospect of immediate relief, since the Board would put these tenants

on interest, in lieu of rent, the moment the agreement was completed, as the Estates Commissioners do under Section 6. Moreover, these men would know that, as their holdings were fairly economic and would not be improved, they could secure no advantage by delay. XXXII.—*Continued.*

Direct sales to be allowed only on certificate of Board.

(*b.*) The advantage to the landlords would be that, as regards the greater portion of their estate, they could proceed by direct sale if they so wished, and sell whenever they wished, instead of waiting until the Board saw fit to approach them.

(*c.*) The advantage to the Board and the public would be the shortening of the period during which it would be necessary for the Board to operate. We recommend later in this Report that the Board should on the average buy and sell £1,000,000 worth of land each year, and in order to enable them to confine the million a year to the cases which really needed their assistance, a means must be devised of enabling other sales to go through concurrently. It would therefore seem desirable that a further sum of, say, £500,000 should, for a certain number of years, be set aside for the purchase of estates, or portions of estates, within the Board's area, which have been certified as suitable for direct sale, or for the purchase of portions of estates, which the Board have agreed to buy from the landlord, solely for the purpose of re-selling to the tenants without treatment.

See paragraph 295.

XXXIII.—The Amount of Land Purchase to be effected by the Board.

224. In an earlier portion of our Report an attempt was made to estimate the size of the problem before the Board, of raising holdings to an economic standard. It was pointed out that the total number of holdings in the Board's area, according to the Census of 1901, is 180,320, of which over two thirds do not exceed £10 valuation. It was also stated that 39,000 holdings had, up to the 31st December last, been bought under the Land Purchase Acts within the Board's area (exclusive of the four rural districts of Cork), and that 28,000 holdings were the subject of purchase agreements pending on the same date. Some of these 28,000 cases will have been completed before the new Board comes into existence, and purchase agreements will have been lodged in respect of other holdings not at present affected. It is extremely difficult to estimate the number of pending cases with which the Board should or could deal.

See paragraphs 111–3.

XI., p. 51.

225. Probably the total number of holdings that will remain to be sold when the new Board comes into existence will not be less than 120,000, including not only holdings unaffected by purchase negotiations, but also those pending cases in which it would be necessary and possible for the Board to intervene. As the total valuation of all the holdings in the Board's area is £2,174,046, the valuation of these 120,000 holdings will probably be not less than £1,400,000. It will not be necessary for the Board to deal with all these holdings, as in some cases an estate, or portions of an estate, will pass direct from landlord to tenant on the certificate of the Board. As regards other estates the intervention of the Board will be in part nominal, as portions of some estates bought will be forthwith re-sold to the tenants without treatment. It is very difficult to estimate what proportion of the land within the Board's area can thus pass. The Chief Land Inspector to the Board very roughly estimated it at one-quarter of the total. This would indicate that the land to be bought and re-settled by the Board would have a valuation of not less than £1,000,000.

XI., Q. 59408.

226. A somewhat similar result is suggested if figures relating to holdings as distinguished from estates or portions of estates are examined. It was suggested in paragraph 113 that the maximum size of the problem of the enlargement of holdings was that involved in dealing with 80,000 holdings (with an estimated valuation of £350,000), and that the additional land necessary for this purpose would have a valuation of about £450,000, making

XXXIII.—*Continued.*

The amount of land purchase to be effected by the Board.

a total valuation of £800,000 for 80,000 holdings. As the Board will have to deal with many other holdings requiring re-settlement, other than enlargement, it seems pretty clear that the figure of one million pounds given above as the valuation of the land to be treated by the Board is not excessive, but it is impossible to give figures that can be regarded as in any way definite.*

227. As we suggest that the Board should buy and re-sell each year land costing one million pounds, it is obvious that, if the average number of years' purchase given by the Board is 20, it will take 20 years to carry out its work of land transfer, if the foregoing estimate, that the total amount of land to be bought and resold by the Board has an annual valuation of £1,000,000, be accepted. If the number of years' purchase given rises to 25, the time required would be 25 years, whilst if 30 years' purchase is given the period would be similarly extended. It has also been suggested that half a million a year should be available for the purchase of estates which do not require treatment by the Board, and as the estimated valuation of such land is not greater than £400,000, it is obvious the transfer of this land may be completed some years before the transfer of the land needing treatment. The period thus indicated for the operations of the Board is undoubtedly long. but it does not seem possible for the Board, at any rate for some years, to deal with more land than has been suggested. Moreover, though land purchase has proceeded somewhat more rapidly over that part of Ireland, which is outside the area assigned to the Board, than within it, it does not seem likely that the transfer of property, to be carried out by the Land Commission, can be effected very much sooner than that carried out by the Board, unless a very marked increase is made in the amount annually available for land purchase. Whether this is so or not, it must be remembered that the resettlement of estates must necessarily be a more tedious process than that involved in direct sales.

XXXIV.—Provisions against Sub-division and Consolidation of Holdings.

228. All our recommendations so far have been concerned with the problems connected with the enlargement of small holdings to an economic standard. Obviously it is necessary to take precautions as far as possible against sub-division or consolidation of these holdings, tending in part to undo the efforts of the Board, upon which much time and money will have been spent. Some who sympathise with our proposals for increasing the size of small holdings fear that they are largely fore-doomed to failure owing to the tendency of the small farmer in the West of Ireland to sub-divide. There can be no doubt that much of the existing congestion has been brought about by this tendency, but although we think that legislative and administrative

* The difficulty of making any accurate estimate is mainly due to the following facts :—

(1.) No record is kept in the Land Commission of the valuation of the holdings sold. All that is shown in the return obtained is their total number and their total price; consequently, the number of large or small holdings that have been sold can only be guessed at.

(2.) The number of holdings that have been sold increases from day to day, and the number of pending cases is correspondingly diminished, though this decrease may be more than counterbalanced by an increase in the number of applications for advances. As the date when the new Board may come into existence is, of course, uncertain, it is impossible to do more than indicate in a very rough way the number of holdings that may remain to be dealt with by the Board.

(3.) It is impossible to say in advance how many of the small holdings already sold the Board may find it necessary, and possible, to enlarge, or how many large holdings already sold the Board may find it necessary to scale down to £100 valuation.

(4.) It is equally difficult to say how far the Board may find it possible to intervene in pending cases.

(5.) It is impossible to indicate how many holdings above £10 valuation the Board may find it necessary to deal with ; some will require radical re-settlement, others will be dealt with by the Board merely for the purpose of carrying out works common to each district, *e.g.* drainage works.

(6.) It is impossible to estimate the price of the tenancy interests which the Board may find it necessary to acquire.

checks upon this practice are useful, and should be made as effective as possible. There seems to be considerable ground for thinking that sub-division of holdings above the £10 standard will cease of its own accord.

XXXIV.—*Continued.*

Provision against sub-division and consolidation of holdings.

229. Mr. Commissioner Bailey, in a report which was presented to Parliament in 1903, stated that the tendency to sub-let or sub-divide holdings purchased under the Land Acts had been either dormant or extremely rare. "The general rule indeed," the report states, "is to add to holdings rather than diminish them in size, and this is especially the case among the small holdings of the West of Ireland." The truth seems to be that when the holding is economic, sub-division is uncommon, but where it is very small, sub-division is frequent. The occupier knows that he cannot live on the produce of the latter class of holding; he is dependent on other resources for his existence, and accordingly he sees no objection to making room for such of his family as require a living place.

Parliamentary paper No. 92 of 1903.

230. There can, however, be no doubt that the existing provisions against the sub-division or sub-letting of holdings subject to a land purchase annuity, without the consent of the Land Commission, should be rigorously enforced. It is not easy to suggest more drastic penalties than those provided in the Land Purchase Acts; the difficulty lies in detecting infringements of the law. If a tenant purchaser sub-divides or sub-lets his holding and desires that the new owner or lessee should pay the poor rate on the part transferred, the matter comes under the notice of the poor rate collector, who is bound under penalty to report the infraction of the law to the Land Commission. There is, however, at present no method for ascertaining secret sub-division or sub-letting. The Constabulary usually visit each holding during the summer for the purpose of collecting agricultural statistics, and they might be required to inform the Land Commission or the Board of any indication of sub-division or sub-letting that comes to their notice, such as the erection of a second dwelling-house. It would probably be useful for this purpose if some arrangement could be made for periodical inspections of holdings by the Board's officers. We would hope that, when these provisions have been operative for two generations, the tendency to sub-divide will be found to have disappeared, and that the higher standard of comfort to which the inhabitants of the West will have become accustomed during this period will be a sufficient safeguard against any sub-division that would entail reducing that standard.

231. A tenant purchaser, however, can always free himself from these restrictions, by redeeming the outstanding amount of the advance that had been made for the purchase of his holding. The provision contained in the original draft of the Land Act of 1903 for the imposition of a small perpetual quit rent was intended to secure for ever the prevention of sub-division and similar evils. It might be sufficient to prohibit for a considerable period sub-division or sub-letting, without the consent of the Land Commission or the Board, of any holding sold by means of an advance under the Land Purchase Acts, despite the fact that the advance had since been paid off. Any infringement of this provision might be visited with penalties as in the case of holdings still subject to purchase annuities.

232. As regards the opposite evil of alienation and consolidation, at present no holding under £10 valuation within the congested districts which has been bought by means of an advance under the Land Purchase Acts, can be sold by the purchaser to anyone except the occupier of a holding in the neighbourhood or the Land Commission. We are of opinion that no obstacle should be put in the way of an industrious small farmer improving his position, but it will for a considerable time be necessary to take drastic steps to prevent the alienation of small holdings to unsuitable people. Accordingly we recommend that no holding within the Board's area which has been sold under the Purchase Acts, whether or not it is still subject to a purchase annuity, should be sold without the concurrence of the Board, who should have the same right of pre-emption over the holding, as they generally have over a farm on an estate which they have purchased.

54 & 55 Vic., c. 48, sect. 37 (3).

XXXIV.—*Continued.*

Provision against sub-division and consolidation of holdings.

233. There is at present a danger in cases of alienation, that if the Board spend money on improving a holding for which they do not charge the purchaser the full value, they may have to buy back from the tenant the improvements effected with their own money, or that, if they do not exercise the right of pre-emption, the incoming tenant may have to pay an excessive price. Thus, if the Board had paid the landlord £250 for the holding, had spent £150 in equipping or enlarging it, and then re-sold the holding to the tenant for £300, they were giving him, at less than cost price, a valuable addition to the holding, in order that he might have a reasonable prospect of making a decent living from the holding. If, however, he were to arrange to sell the holding subject to the purchase annuity for, say, £200, £100 might represent his former interest in the holding, and the other £100 might represent that part of the improvements made by the Board and not charged for in the annuity. Thus the Board would have to buy back the value of the improvements for which they had not charged the tenant, or else the incoming purchaser would have to pay the outgoing man for what the Board did not consider it safe to charge the occupier, and consequently might enter with a ruinous burden of debt round his neck. Probably the simplest way to meet this difficulty would be to have a clause in the vesting order providing that if the holding is sold within a certain period the Board should be entitled to receive a certain sum representing the value of the improvements made but not charged for. The Board would, of course, exercise their discretion as to the cases in which they should enforce their powers.

234. We do not, however, anticipate that many small farmers, whose holdings have been re-settled by the Board, are likely to sell voluntarily, for few of those would know how to employ the money they got except in farming somewhere else. "In Connaught," the report, already referred to, on the condition of tenant purchasers, states, "we found less desire to sell their interest among tenant purchasers than in any of the other provinces. The prevailing anxiety is to retain their holdings at any cost. 'I could well perceive,' says our Inspector, 'the love these people have for their little homes, and how desperate must be their position before parting with them, and purchase seems to make them cling to them more even than before.' In Galway, Roscommon, Mayo, and Sligo, we invariably found that the people have no wish to leave their holdings unless forced by absolute necessity."

235. It is, we think, necessary to give the occupiers of small holdings, whether purchased or not, within the Board's area, some further defence against involuntary alienation caused by the money lender, either as a creditor or mortgagee, but we shall recur to this subject in dealing with the question of the extension of credit facilities and restraints on mortgaging.

See paragraphs 247–9.

XXXV.—Machinery and Funds for Work of Agricultural Development.

236. The large proportion of this Report that has been devoted to considering the amount of land required for raising uneconomic holdings to a proper standard, what amount may be obtained, what powers are necessary for its acquisition, how the price to be paid should be arrived at, and similar questions, is due to our conviction that it is to the land that the great majority of the people within the Board's area must look for a living, and also because we believe that an enlargement of most uneconomic holdings is the condition precedent to any marked agricultural development. We think that by the expenditure of a considerable sum of money and the exercise of tact and patience this essential work of enlarging small holdings can be accomplished, but we are absolutely convinced that unless the people thus benefited make great improvements in their methods of agriculture, the results achieved will be incommensurate with the time and money expended. Hence we consider that the provision of the necessary funds, and of the best machinery for agricultural development is a matter of great importance.

See paragraphs 57–62.

See paragraphs 63–7.

237. We have already considered what the Board did for the development of agriculture within their area, and have described the conditions under which the work was transferred to the Department of Agriculture and Technical Instruction. Numerous witnesses have criticised the way in which the Department have carried out the work of agricultural development in the

congested areas, since 1904, as compared with the work the Board did before that year. As regards a good deal of this criticism, we consider that insufficient allowance has been made for the following facts:— XXXV.—*Continued.*

Machinery and Funds for work of Agricultural Development.

(*a.*) When the Board relinquished their work it had been operating for twelve years in the congested areas; when the Department took over the work they had been operating for only three years in non-scheduled Ireland, and their staff was fully occupied in bringing into play the elaborate machinery created by their Act for the immense work of developing the agricultural resources of Ireland. Only four years have elapsed since the taking over of the work by the Department, or one-third of the time during which the Board was engaged in the promotion of agriculture, and the Department naturally took some time to realise the exceptional nature of the treatment required for the congested districts.

(*b.*) The Department were given only £2,000 a year to carry on work upon which the average expenditure of the Board had been £11,000 a year, and to supplement this small grant the Department, with the concurrence of the Agricultural Board, had to take money from their endowment which was originally given for non-congested Ireland, and which was almost entirely hypothecated thereto. At first the Department were undoubtedly greatly hampered by the insufficiency of the funds, then deemed available. Thus in the first year or two they were able to employ only a few instructors instead of the twenty-one resident overseers and the seventeen additional temporary overseers who were at work in the congested districts last summer. The sums devoted to the congested districts by the Department and the Agricultural Board have increased each year until they reached the present figure of £10,000, but the end of the Department's reserve is now reached, and, at the conclusion of the present financial year, they will be unable to carry on the work which is being done at present, unless more funds are provided.

(*c.*) Mr. Wyndham's minute, to which the Department and the Agricultural Board seem to have attached great importance, contemplated that agricultural development could not be carried on in future in the scheduled areas as freely as in the past. "They (the scheduled districts) will, however, surrender in respect of agricultural schemes a part of their right to preferential treatment." The people in the congested districts do not, however, seem to have realised that they were called upon to relinquish part of their preferential treatment. The hope, held out by Mr. Wyndham, of future aid to the Department in their work in the congested districts has not yet been realised, and the Department have never been free from the handicap of insufficient resources for expenditure in the congested districts—insufficient certainly according to the expectations of the people who had in view the standard set by the Board. I. p. 269.

(*d.*) The change from the Board's system of assistance, through schemes framed with regard only to the interests of the congested districts and administered from head-quarters, to the Department's system of assisting only those who were willing and able to help themselves, through schemes administered for the most part by the people themselves, and framed with an eye not only to the interests of the locality but also to the agricultural interests of Ireland as a whole, was not likely to become popular in the areas in which the change took place. Some of these areas were not ripe for too rigid an application of self-help, and, as events proved, it took a considerable time for the people to realise the nature of this great change. The poorer districts undoubtedly suffered from the unavoidable abatement of preferential treatment as regards agricultural development.

238. It seemed desirable to point out the qualifications affecting any comparison between the Board and the Department, but, it does not seem that it would serve any useful purpose to follow up the comparison, especially as during the last two years a Committee has inquired into the working of the Department and reported thereon. It was suggested by some witnesses that the development of agriculture within the Board's area should be re-transferred from the Department. On this proposal Cd. 3572–1907.

XXXV.—*Continued.*

Machinery and Funds for work of Agricultural Development.

it may suffice for us to remark:—(*a*) that the new area of the Board is double that of the old, and that, consequently, the re-transfer would mean an immense addition to the Board's labours; (*b*) that additional expense would be involved, as the Board would require, in addition to local inspectors and instructors, who must be employed by whichever body does the work, a highly-skilled headquarter staff similar to that possessed by the Department; (*c*) that it would re-introduce the evil of dual administration without compensating advantages. This evil would be especially noticeable in agriculture, as much co-ordination has been effected by the Department between the administration of agricultural development and the administration of veterinary and public health laws, transit regulations, and laws against adulteration of food and feeding stuffs. The existence in adjoining counties of different systems of development, framed on different, sometimes conflicting ideals, and administered by different staffs, would not make for smooth working, and would inevitably give rise to irritating comparisons. Moreover, the local authorities have now become accustomed to the exercise of certain powers in respect of the administration of the rate and the Department's grant; over the supplementary schemes of the Department they also appear to be exercising or seeking some control; and to deprive them of such power as they now possess would give rise to discontent. While the work of the County Committees will, for some time, require to be considerably supplemented in the poorer districts, it would be a retrograde step to diminish their present powers or to impose limits to their development. The true line of progress seems to be to encourage the gradual increase of their powers and responsibility for agricultural development.

239. We therefore recommend that the Department should continue to do the work of agricultural development in the Board's area on an extended scale, and that certain modifications should be made in the present machinery in order to bring the Department's schemes of development into greater harmony with the special wants of the poorer districts. It is clear that the agricultural development to which we attach so much importance is work requiring the active co-operation of the people concerned, and we noticed that some of the witnesses who appeared before us seemed dissatisfied with the constitution and methods of the Department. We have no doubt that it will be absolutely necessary for the farmers of the West, especially those whose holdings are enlarged, to utilise to the full the existing facilities provided by the Department—over which the people have more control than over any other department of Government. This they can do without prejudice to their right of seeking, through their representatives in Parliament or on the Council of Agriculture, to bring about any changes in the constitution or methods of the Department which they deem advisable.

240. Additional funds will be required for the agricultural development which we contemplate, but it is clear that the poor circumstances of the Board's area call not merely for more generous treatment than the rest of Ireland, but also for more detailed and exceptional treatment. It, therefore, seems advisable to bring the Agricultural Board and the Department into closer touch than they are at present with the requirements of the poorer portions of the Board's area, and indeed to bring each County Committee into closer touch with the poorer parts of their own county. Owing to the difficulties of distance, expense, etc., the representatives of many of the poorer districts are unable to attend the monthly meetings of the County Committees, and make their wants and wishes known. The evidence given before the Commission went to show that schemes which were excellent for Ireland as a whole, or even for parts of some of the counties containing congested districts, were quite unsuited for poorer parts of the same counties. Moreover, there can be no doubt as to the desirability of the Board being able, in co-operation with the Department, to provide for concentration of effort either in a particular district or on a particular phase of agriculture. Thus if a great grazing tract was acquired by the Board and cut up into small holdings for migrants, the need of concentration in that district, and of giving special attention to the encouragement of tillage is obvious; and instances of this sort could be easily multiplied.

XXXV.—*Continued.*

Machinery and Funds for work of Agricultural Development.

241. The practical difficulty is how to give the Congested Districts Board an effective voice, without setting up dual administration or unnecessarily complicating the difficulties of the Department's officers. If the powers of the Agricultural Board, over schemes to be adopted by the Department and the County Committees, were transferred to the Congested Districts Board, as regards such supplementary schemes as are found necessary in their area, the County Committee and the Department might be engaged in carrying out quite different schemes in the same county, and the local authorities, as well as the Department's officers, might thus find themselves in an impossible position. Another suggestion made was that a joint committee of the Agricultural Board and of the Congested Districts Board should exercise, as regards the nine counties, the powers at present exercised by the Agricultural Board all over Ireland. This scheme seems to be open, though in a less degree, to the same objections.

242. There seems, however, no reason why the Department and the Congested Districts Board could not by conference and consultation come to an understanding as to the schemes to be carried out within the Board's area, and as to the principle on which such work should be done. With consultations from time to time as to details, we think that no real difficulty could arise in the way of satisfactory co-operation between the two bodies. We are strongly of opinion that, having regard to the powers of the Agricultural Board in settling the general outlines of the policy of agricultural development to be pursued throughout Ireland, much advantage might ensue if the Congested Districts Board were allowed to nominate two additional members to the Agricultural Board, to represent the special wants of the congested districts. We think that the two persons so nominated should also be *ex-officio* members of the Council of Agriculture, of each County Committee of Agriculture within the Board's area, and, also, of any special committee formed to meet the wants of remote or exceptionally poor congested districts. Moreover, we think that the elected representative on the Congested Districts Board of each county should be *ex-officio* a member of all agricultural and technical instruction committees in his own county.

243. It is obvious that the above machinery for agricultural development though applicable to the Counties of Donegal, Galway, Leitrim, Mayo, Roscommon, Sligo, Clare, and Kerry, will need some modification as regards that portion of Cork which we think should be placed under the Board. Probably the simplest plan will be for a joint committee of the four rural districts of Bantry, Castletown, Skibbereen, and Schull, to be formed with powers, in respect of these districts, similar to those possessed by the County Councils and County Committees in the other counties. This Committee would elect the Cork representative to the Congested Districts Board and, while the County Council would have to levy the rate, it would pay the money raised therefrom in these four rural districts to the joint Committee, as at present it pays the rate levied over the whole county to the County Committee.

244. As regards the money required, we are of opinion that, since the income of the Department was given to them for non-congested areas, their funds must be increased, if they are in future to supplement the penny rate that may be levied in congested areas, by the amount necessary *i.e.*, about £3,000 a year. This grant would enable the Department to carry out the ordinary county scheme in the present scheduled areas, and would be in substitution of the present subvention of £2,000 given by the Board. As regards the money required for supplementary schemes, it appears that the Board were spending in the scheduled areas about £11,000 a year before the transfer. The Department spent during the last financial year about £10,000 and propose to spend the same amount this year, but they regard this sum as inadequate. Professor Campbell in his evidence estimated the amount required for Connaught, Donegal, and Kerry, at £31,000. The Department have since stated that the amount required for agricultural development in the eight counties and the four rural districts in Cork, which we recommend should form the future area of the Board, will

IV. p. 220.

XXXV.—*Continued.*

Machinery and funds for work of Agricultural Development.

be not less than £25,000, in addition to the sum raised by the penny rate and the corresponding grant in aid made by the Department. It is not easy, on the evidence before us, to offer an authoritative opinion on the point, but it does seem clear that certainly not less than £20,000 a year (exclusive of the £3,000 a year mentioned above for backing the penny rate in the congested districts) should be assigned to the most important work of agricultural development within the Board's area.

245. Numerous suggestions were made to the Commission about changes that might be advantageous in the present methods of agricultural development, but as the whole question of the Department's powers to carry out this work and the suitability of the methods adopted have been recently inquired into, it does not seem necessary for us to go into the question. There was, however, one criticism directed against a method adopted both by the Board and the Department, namely, the employment of itinerant instead of resident instructors, that is so typical of many difficulties that it may be useful to notice it. This criticism is very similar to those frequently passed on short industrial courses. No one doubts that resident instructors or long courses are, other things being equal, preferable to itinerant instructors or short courses, but it is entirely a question of money. The difficulty with the Board was how to get the best advantage from a certain limited sum of money, and this difficulty was intensified under the Department, since every district contributed to the rate which was levied to defray part of the cost, and, hence, had a claim to share in the advantages to be derived from the instruction. As funds were limited, the only way to meet these claims rapidly was to spread the instructors' work over a large area, either by means of a succession of short courses or by means of itinerant instructors. There can be no doubt that in the future the number of instructors for the poorer parts of the Board's area will have to be increased no matter whether their services are confined to the particular locality in which they are resident or whether they are itinerant over smaller districts than at present. One instructor in every parish would be very useful, but also very costly, and the question in the future, as in the past, is how to get the best advantage for a certain limited amount of money. It may be found useful to employ itinerant instructors over the greater part of the Board's area and to concentrate each year, or every two or three years, upon a few districts, especially districts that have just been resettled, and there employ a number of resident instructors.

246. A point on which considerable evidence was given was the establishment of school farms and school gardens, but as any recommendation on this point would involve a consideration of important educational questions, on which we have not taken evidence, and upon which we do not feel competent to express an authoritative opinion, we content ourselves with observing that several of our number are impressed with the necessity for preparing, in the primary schools, the rural population for an agricultural life.

See pp. 202 and 206.

XXXVI.—Drainage and Afforestation.

247. Two matters closely connected with agricultural development—namely, drainage and afforestation—require further consideration. Few questions were referred to more frequently in the evidence given before us than the desirability of making better provision for the construction and maintenance of drainage works both large and small, and our tours in the West of Ireland confirmed the statements made as to the urgency of this matter. Whether the existing drainage code was well adapted to the circumstances existing at the time it was enacted or not, there can be little doubt that it is unsuitable and inadequate for present needs, and we are convinced of the urgent necessity for devising and putting into force a better system. It seems quite clear that a central drainage department should be established and endowed for the carrying out and maintenance of schemes affecting large areas, and for the exercise of general supervision, both as regards construction and maintenance, over the local drainage bodies which should look after smaller schemes. It also seems

desirable that these bodies should be linked on to, or at any rate associated with, the existing local rating authorities. It is difficult to indicate what amendments of the present law are desirable in order to facilitate the Board in carrying out drainage works, apart from a complete revision of the drainage code as a whole, and we are relieved from dealing with this very important matter in detail, as a Viceregal Commission has within the last couple of years inquired into the question, and their report suggests what seems, in the main, to be a satisfactory solution. We have only to add that no remedy that can be suggested for the problem of the West will be effectual, in many districts, until the drainage question is adequately dealt with.

XXXVI.—*Continued.* Drainage and Afforestation.

Cd. 3374–1907.

248. The Commission received evidence that in some of the poorest regions, such as Connemara, there were large tracts more suitable for extensive afforestation operations than for any other purpose, and it was suggested that such a utilisation of the land would from the first afford considerable employment. We do not consider it necessary to go into the matter at any length for several reasons, especially as a Departmental Committee has recently inquired into the matter, but we are of opinion that a forestry department or branch should be created to deal with this work over the whole of Ireland, and that it should be their duty to direct particular attention to the possibilities of the Board's area for afforestation. It would be well that the Board should, when they acquire land suitable for this purpose, make an offer to the Forestry Authority, and we also think that co-operation of County Councils and other local bodies should be enlisted. The Board should at the same time do everything they can towards encouraging within its area the plantation of shelter belts and discouraging the cutting down of trees, except in a husbandlike manner. Wherever a tenant-purchaser has a plantation on his holding it may be desirable to introduce a covenant against waste into his vesting order, though we cannot disguise from ourselves that there are difficulties in enforcing observance of the covenant.

XXXVII.—Sporting Rights.

249. Our attention has been directed to the question of shooting and fishing rights, and especially to the fact that after the failure of the Board's attempt to reserve the sporting rights on the Dillon Estate, they passed a resolution that their policy should be either

I., p. 233.

(*a.*) To reserve these rights to the Board for the benefit of purchasers.

(*b.*) To invite the purchasers to form a representative committee, and to vest the sporting rights in the committee, or in trustees nominated by the committee, for the benefit of the new peasant proprietors.

It has been stated that, since this resolution was passed, the vendor, in a few cases, retained sporting rights when selling to the Board, and that where he did not do so the sporting rights have generally been conveyed to the tenants individually. We consider that this fact raises a grave question. In some cases sporting rights are of practically no value; in other cases they are of some importance; and in some cases (*e.g.*, in certain parts of Connemara) sporting rights, especially fishing rights, are more valuable than the land itself. Under the existing law, landlords and tenants can arrange for the retention by the former, or the conveyance to the latter, of the sporting rights, and we see no reason why this freedom of bargaining should be interfered with. Where, however, the Board acquire the rights, and they are of any appreciable value, either in themselves or because they are close to valuable sporting properties, we are of opinion that they should not, on re-sale, be vested in the tenants individually. As is explained in the separate note (B) attached to this Report, such dissipation of rights amongst a number of small occupiers, usually results in a great depreciation of an asset that is sometimes of considerable value. We think that the Board should either themselves retain the rights, where, from any cause they are of value, and manage them for the benefit of the tenant purchasers whose holdings are affected thereby, or else vest them in trustees, or a committee of the tenants for the same purpose somewhat on the lines adopted by the Congested Districts

See p. 125.

XXXVII.—*Continued.*

Sporting rights.

Board for Scotland It may be objected that this method assumes that the whole body of tenants upon an estate, and not merely those upon whose holdings game is found, should provide the necessary sum for acquiring the sporting rights from a landlord. For instance, the tenant of a purely grass holding might have an addition made to his annuity for the acquisition of rights to kill game—when such game is seldom if ever to be found upon his holding. It seems to us, however, that any attempt to make a selection of tenants upon an estate, who could fairly be called upon for an increase of annuity in respect of sporting rights, would involve an apportionment of value practically impossible, for under such an arrangement each holding would have to be separately assessed so far as its sporting value was concerned, in order to arrive at the fair increase of annuity to be charged. Under these circumstances we of are opinion that common rather than individual ownership should be aimed at—that all the tenants upon an estate should contribute to the sum required for the acquisition of the sporting rights, and that they should receive in return a proportionate amount of the revenue received from the letting of such rights by the committee in whom they have been vested by the Board. We believe that if they are properly managed public support will be enlisted on the side of proper preservation, to the great pecuniary advantage of the district affected. It only remains to point out that where the rights are of exceptional value, the tenants cannot hope to acquire them except at a price out of all proportion to the agricultural value of their holdings.

XXXVIII.—Maintenance of Improvements and Work of Parish Committees.

250. In addition to improvements effected in holdings before re-sale by the Board there is considerable work to be done on the holdings after they are vested in the tenant-purchasers. Thus, during the time an estate is in the hands of the Board, it is seldom found possible to effect much in the way of house improvements, as the men are generally employed by the Board on estate works, and hence improvements and additions to dwelling-houses, out-offices, fences, and small drains have generally to be carried out after vesting. At present the Board frequently make loans for these purposes, and they sometimes get the work done through the stimulus supplied by parish committees, sometimes it is done by the occupier without assistance, and in other cases it is left undone. We are of opinion that the parish committees should not be regarded as otherwise than of temporary duration, but it seems probable that, for several years after the sale of an estate in a poor parish, they can be most useful, in fact even more useful and economical than before. Where it is not possible or desirable for the Board to do much in the way of land re-settlement, *e.g.*, amongst a community of farming fishermen, &c., the parish committees apparently have special scope for their work of house improvement. In order to encourage the more general adoption of, and persistence in, spraying it might be found useful to utilise the machinery of parish committees, and similarly their grants might be of aid in inducing fishermen to take better care of their gear.

251. It has been suggested that district sub-committees organised under a county committee would be an improvement upon parish committees, but there seems to be reason to think that no committee with purely advisory functions will be able to do much good for some time, at any rate, in the poorer parts of the West. If the sub-committees suggested are given powers similar to those of the parish committees, then the new committees must be numerous, for the minute work done through the existing committees could hardly be supervised by a body dealing with an area larger than a parish. If the suggested sub-committees were organised in each parish they would probably differ little in *personnel* from the parish committee, so it is somewhat hard to see what would be the precise object of the suggested change. The question of modifications of the parish committee could be best decided by the new Board, and must depend very largely on the facts in each case. In this connection it may be remarked that, as parish committees are suitable only for a very poor and depressed community, we do not think that they should be introduced into the richer portions of the added areas of the Board.

XXXVIII.—*Continued.*

Maintenance of improvements and work of Parish Committees.

252. The question of the maintenance of improvements effected by the Board has presented great difficulties. It has been pointed out that though it may be difficult to get landholders in the west of Ireland to make improvements it is still more difficult to get them maintained. For this reason the Board have wherever possible got the local authorities to make presentments in respect of marine works, roads, bridges, &c., as by doing so the duty of maintenance falls upon the local authorities. This is, however, impossible in the case of small accommodation roads and, of course, as regards all works carried out on holdings. Where the improvement has been effected before the holding was vested in the occupier, it would be possible to make the beneficiaries legally liable for maintenance, by the insertion of a covenant to this effect in the vesting order, breach of the covenant to be punished by fine or, ultimately, by the sale of the holding. As regards the maintenance of improvements carried out through the assistance given by the Parish Committee, future recipients of these grants might be required to enter into undertakings for their maintenance, and the responsibility of seeing that the works were attended to might be thrown upon the Parish Committee and their supervisors. The chief trouble will arise from the difficulties of inspection. If, as we hope the policy that underlay the recommendations of the Vice-Regal Commission on Arterial Drainage is given effect to, and a central authority established with local branches, they might relieve the Board of the responsibility of supervising the maintenance of drainage works common to a number of occupiers. The maintenance of smaller drainage works and of accommodation roads will be more difficult than of works on individual holdings since the responsibility must be divided amongst several landholders. In cases of neglect the Board might be given the power of carrying out the necessary repairs and of apportioning the cost amongst those benefited, and the duty of collecting this money might be thrown upon the local authority in the same way as local or separate charges are collected. There might be an appeal to the County Court from the Board's assessment.

Cd. 3374–1907.

253. There is a further question connected with the improvement of dwelling-houses and the building of out-houses for cattle, &c., to which our attention was called, namely that small landholders are often discouraged from making these improvements by the fact, that, as a result, their poor law valuation is increased. As the rates in many parts of the congested districts are extremely high, an addition to the valuation by reason of improvements may mean a comparatively heavy tax which tends to discourage, at any rate, non-productive, improvements. Relief might be afforded by exempting agricultural holdings below, say, £20 valuation for a certain number of years from an increase in their valuation, in consequence of improvements effected in the dwelling-houses and out-offices. It may be noted, in this connection, that Section 5 of the Marine Works Act of 1902, provides that a certified work, or any work ancillary thereto, shall not, for a period of ten years from the completion of the work, be assessed to any local rate at a higher value than that at which the land occupied by the work would have been assessed, if it had remained in the condition in which it was immediately before it was acquired for the purposes of the work.

2 Ed. VII., c. 24 sect. 5.

XXXIX.—Agricultural Co-operation and Re-organisation of Credit.

See paragraph 236.

254. We have indicated our belief that it will not be sufficient to give the small farmers of the West more land, unless they are properly educated to make the best use of it. We also think that they need organisation for many purposes, notably, in order to market their produce to the best advantage. Agricultural co-operation has been found necessary in most countries where there are a large number of peasant proprietors, for overcoming the disadvantages from which small occupiers suffer, by reason of their isolation, in the face of highly organised modern competition. Much hopeful work has been already done in Ireland, in this respect, and it is important to note that the Departmental Committee that recently inquired into the subject of small holdings in Great Britain strongly recommended the promotion of all forms of agricultural co-operation, especially the formation of agricultural credit societies. We have

[Cd. 3277, 1906.]

XXXIX.—*Continued.*

Agricultural co-operation and re-organisation of credit.

already considered the steps that have been taken by the Board in conjunction with the Irish Agricultural Organisation Society in this direction, and few subjects seem to us deserving of more attention than the re-organisation of rural credit. This involves an extension of desirable credit facilities and a curtailment of uneconomical indebtedness.

255. The enormous indebtedness of the small landholder in the West is unfortunately beyond doubt; the creditors are mostly shopkeepers, partly for shop goods and partly for money lent. There can be no question as to the evil results of the system. Even the ordinary and, perhaps, inevitable indebtedness of many of the small men of the West is often enormously increased by a system somewhat analogous to "truck," under which the shopkeeper purchases much of the produce of his debtor (butter, eggs, knitted goods, sometimes cattle), often at a reduced price, which is not paid for in cash, but merely entered "on account" of an existing debt. It is not suggested that a large proportion of shopkeepers in the congested districts abuse their opportunities, but the temptation to make improper use of the power thus obtained, especially where there is a monopoly, is often irresistible, and even the credit system honestly carried out is liable to abuse. On the other hand, it must be recognised that a small farmer, who unlike an artisan, receives his income at comparatively irregular intervals, must have credit for shop goods, and also that careful borrowing for reproductive purposes is just as important in agriculture as in any other business.

Parliamentary Paper No. 92 of 1903.

256. Mortgages have been described as the never-dying worm of peasant proprietorship, but Mr. Commissioner Bailey, in the report to which reference has been already made, drew attention to the care and circumspection the majority of tenant purchasers show in getting loans. He declared that "contrary to what might be expected, and, indeed, to the experience of most countries, the [land] purchase system has up to the present been unfruitful to the gombeen man who in many districts has not alone failed to extend his business, but has actually disappeared altogether." He, however, drew attention to the great need for more capital experienced by most purchasers, and it is obvious that the restrictions placed on the borrowing powers of peasant owners must be very carefully devised so as, on the one hand, to discourage improvident borrowing, and, on the other, to meet as far as possible legitimate demands for credit facilities. Under the 54th Section of the Land Act of 1903, no holding sold under the Land Purchase Acts after 1st November, 1903, can, without the consent of the Land Commission, be mortgaged or charged for a sum exceeding ten times the purchase annuity, or just less than one-third of the amount advanced. This limitation does not, however, seem sufficient to safeguard the small farmer, and we have already considered some restrictions upon the alienation of purchased holdings, but further protection is required and it might be desirable to introduce some provision analogous to the homestead laws that prevail in many of the United States of America and in some colonies.

257. A similar result might be arrived at, by the application to Ireland of the Bankruptcy Act of 1883, with some extension of Section 122, so that a small holding might be protected in the same way as a debtor's household goods, wearing apparel, and the tools and implements of his trade are up to the limit of £20. The same Act might also be applied to give an indebted small farmer relief by enacting that, when indebted to a certain amount, leave might be given to him to petition for the administration of his holding by the local County Court Judge, who might be empowered to make an order providing for the protection and the administration of the holding and for the payment of the petitioner's debts by instalment or otherwise, either in full or in part, and subject to any conditions as to future earnings or income that the court saw fit to impose. It might also be enacted that, as regards any mortgage on the holding effected after the commencement of the Act, the mortgagee should have no remedy against the holding except by leave of the court, or that such holdings should not be security for a mortgage or a bill of sale in future. These suggestions are necessarily somewhat tentative, but we

have no hesitation in stating that some provision to check the improvident pledging of small holdings in the West of Ireland will be necessary for, at least, a generation before the matter can safely be left to the enlightened self-interest of the small farmer.

XXXIX.—*Continued.* Agricultural co-operation and re-organisation of credit.

258. Such provisions would, however, be useless if they were not supplemented by an extension of the existing facilities for legitimate borrowing. It is difficult to over-estimate the effect that a well-organised system of agricultural credit would have upon the West of Ireland. To take one example, many of the migratory labourers who go to Great Britain in search of work are landholders, whose farms would profitably respond, were capital available, to a very considerable amount of labour intelligently applied. At present the lack of capital and the inability of a small landholder to wait over a season for the reward of his industry turns the balance in favour of migration. The Board at present make loans for house improvement, the erection of offices, the provision of stock, &c., and loans can be procured from the Board of Works for various purposes, though the regulations are not, perhaps, sufficiently elastic to meet the requirements of the West. There can be little doubt that small holders in the Board's area who obtain enlargements must get increased credit facilities, for equipping and stocking their land if they are to make the best use of it. This need among the poor communities in the Board's area may be met in part by an extension of the co-operative banks, which the Board and the Irish Agricultural Organisation Association seem to have developed in the west with great advantage to the districts concerned. The organisation of real as distinguished from personal credit is a more serious undertaking, but it must undoubtedly be faced and the creation of a peasant proprietary ought to clear away one great obstacle to the establishment of Land Banks, namely, the absence of a cheap, simple, and comprehensive system of registration of title. The reports made by Mr. H. de F. Montgomery and others as to the systems existing in some foreign countries, notably in Germany, indicate the possibility of meeting the other difficulties by a judicious combination of State aid and co-operative agricultural organisation, for, amongst other things, the mutual insurance of cattle.

See paragraphs 92–4.

See especially Bulletin No. 2, issued by the Department of Agriculture and Technical Instruction.

XL.—Fishery Development.

259. After agriculture, the best hope of improving the condition of the people in the maritime parts of the Board's area probably lies in the development of the sea fisheries of the west coast. Attention was called during our sittings to the enormous difference between the value of the fish landed in England, Scotland, and Ireland. During the last few years the average has been :—England, £7,500,000 ; Scotland, £2,500,000, and Ireland £400,000. While these figures undoubtedly seem to suggest that the Irish fisheries should be capable of great development, it must be remembered that £400,000 does not represent the value of the fish caught off the Irish coast, as much of this is landed at various ports in England and Scotland owing to their proximity to the great centres of consumption. In view, however, of the great difficulty commonly experienced in obtaining fish in the inland parts of Ireland, it would appear that organisation and improved transit facilities would very materially increase the home demand for the harvest of the Irish seas. We have already considered what the Board have done in the past, and in judging of future developments of the west coast fisheries, the main points to be considered seem to be the supply of fish, the regularity with which men follow the fish, the provision of boats and the improvement of landing and marketing facilities.

See paragraphs 68–78.

260. As regards both mackerel and herrings the past history of Irish fisheries shows that the fish are extremely erratic in their movements through causes which it is hard to explain. The fish, after being in certain places in great quantities for a number of years, disappear sometimes for a very long period ; hence, so far as fishermen accustomed to fish only off their own coast are concerned, the industry cannot generally be regarded as being on a really permanent basis for large boats. The Donegal herring fishery has been for some years very successful, and at present even the large boats, though

XL.—*Continued.* Fishery development.

confining their attention to the coast of Donegal, make a very fair profit one year with another. Yet even here if the herrings disappear for years from the district, as they have done before, unless the fishermen follow the fish wherever they go, the local fishing fleet may again collapse. Even as it is, the migratory boats, mainly Scottish, that follow the fish all round the coast of the United Kingdom, are much more successful than the Irish boats which mainly confine their attention to their own shores. It may, therefore, be that the Irish fishing industry cannot be considered as being established on a really safe and permanent basis until the fishermen learn to follow the Scottish method.

261. This point seems to be closely connected with the question of the advisability for concentration as regards marine works for deep-sea fisheries. It has been frequently urged that the Board should spend money at numerous centres on boat slips and small harbours. In some cases, it would appear to have been thought that this is practically all that is necessary for developing the fishing industry around the greater part of the coast, and that it would enable men all along the sea-board to make a fairly good living without following the fish, or leaving their homes for any length of time. If it were possible to preserve for the inhabitants of any particular maritime district the exclusive right of fishing off their own coast, the view might be sound but for the vagaries of the fish. If, however, the Board were to spend money in developing any particular fishery, and if their efforts were attended by any marked measure of success, there would immediately be a large influx of Scottish, English or foreign fishermen, who spend their lives pursuing their trade wherever fish are to be found in paying quantities. The result would be that, for a time at any rate, the less well equipped and less experienced native fishermen would catch less than their competitors, and when the fishing was over in their district they would not be better qualified than they now are for following the fish round the coast.

262. The conclusion seems to be that, so uncertain are fish in their movements, so great is the mobility of the modern fishermen, so keen is competition, and so improved are the methods of communication, transit, &c., fishing does not furnish a really secure and permanent livelihood for a large number, unless the fishermen devote their attention almost exclusively to this business, and are accustomed not to confine their attention to their own coast, but to fish in each district in its season. Some Irish boats already do this, but the practice has not become general. It must be noted, however, that in comparatively recent years there has been an important development in the fishing trade which is likely to affect the prospects of the professional fishermen who use large sailing vessels, namely the increased use of steam drifters and steam trawlers. The thoroughness with which these vessels fish, the expedition with which they can go far afield and return, and the extent to which they deplete the more convenient fishing grounds may profoundly affect the future of sailing vessels. It is necessary, therefore, to bear in mind that before a very large number of fishermen can be induced to take to fishing as a continuous business, and follow the fish round the coast, fishing by steam drifters may have become practically the only profitable method.

263. As regards deep-sea fishing, the Galway and Mayo fisheries require development of a different sort from those of the south-west and north-west. Off Cork, Kerry, and Donegal the fishing may be regarded as fairly well established. The chief danger to be guarded against is the temporary disappearance of the fish, and hence the importance of teaching the fishermen not to confine their attention to their own shore only, but to follow the fish all round the coast, even though large sailing vessels are to be replaced by steam drifters. Progress in this direction must naturally be gradual, and in any case it cannot be expected that all the fishermen will do this, so that every development of the fisheries must be sought after and fresh fisheries exploited. Hence the importance of having scientific investigations and surveys of the waters off the western coast made with the object of ascertaining where fishing is likely to be profitable. There can be little doubt that this work must be carried out before any large developments can be hoped for. A certain amount of such work is already done by the Department (which is

XL.—*Continued.* Fishery development.

also responsible for the policing of the Irish coast, and is in touch with the investigations carried on by foreign countries) and it probably would be desirable to continue to carry out the scientific investigations and surveys through the fishery branch of the Department.

264. The Galway and Mayo problem is much more difficult; the human element is not, from a fishing point of view, so promising, though many of the fishermen are good boatmen, notably those of the South Connemara littoral. They have not hitherto been inclined to go to sea so far or for so long as successful deep-sea fishing requires, and it will apparently be some time before any considerable number of them are induced to become professional deep-sea fishermen. A good many, too, have yet to learn to take proper care of their gear. Moreover, the inhabitants of the Galway and Mayo coast—though perhaps the poorest class in the Board's area—have alternative occasional employments which hinder them from becoming regular deep-sea fishermen. As soon as there is any check in the fishing the tendency is to resume turf carrying or kelp making.

265. Little less than the creation of the off-shore fishing industry was, the task awaiting the Board here sixteen years ago, and in many localities the task is still before them. It is well known that at the beginning of the 19th century there was a great herring fishery off Connemara, of which Roundstone was the centre, but the attempts to revive it have not been very successful. Off the Galway coast the Board's successes have been achieved at Cleggan and Aran, and further development might be very marked, if the Clifden Railway could be extended to Cleggan. They have not been successful in their attempts to develop the Blacksod fishery and Broadhaven is thought to be the most likely future centre. It seems quite clear that the Board, in order to make the fishing in Galway and Mayo successful, will have to give much more help in the way of supervision, instruction, loans for boats, and assistance in marketing. Even then a large measure of success is doubtful, though there can be no question as to the advisability of continuing the attempt. The danger always remains, when dealing with a coast exposed to the prevailing westerly winds and the full sweep of the Atlantic, that seasons may come when for months large boats could not leave the harbours or more sheltered bays.

266. Generally speaking, inshore fishing, as it exists, can be regarded only as a subsidiary industry, except, perhaps, in connection with the autumn mackerel fishery in the south-west. In some places men make a fairly good living entirely from inshore fishing, especially from lobster fishing, if marketing facilities are convenient; but, for the most part, these men are partly dependent on their small holdings and must lead a somewhat amphibious existence. It would not seem desirable in general to attempt to effect any change in their condition. The majority of these men, like many of the maritime population, would not care to migrate inland, and probably many of them would not succeed very well if they did. In some places, especially in South Connemara, they do a very considerable export trade in turf, though supplies, conveniently situated, are diminishing, and to others kelp-making affords a not inconsiderable source of income. To a large number, however, inshore fishing is the most important business. Except in a few places where there are good landing places for large boats and transit facilities, it does not seem desirable to attempt to introduce deep-sea fishing, unless surveys and investigations indicate that there are really good fishing banks in the vicinity. The most that can be done is to assist the men to better, though not necessarily larger, boats, and to improve, where absolutely necessary, boat slips and landing places, though it is obviously impossible to meet a large proportion of the applications made in this respect.

267. Harbour accommodation is one of the most serious questions in connection with Irish fisheries. What has been done in the past has already been described at considerable length. In the future careful attention, and, so far as the fresh fish trade is concerned, concentration on suitable sites, served wherever possible by railways, should be insisted upon. As regards the cured fish trade the centres may be more numerous but they must necessarily be limited by what is a very practical limit, the possibility of

See paragraphs 71–3.

XI.—*Continued.* Fishery development.

providing additional marine works. As regards the provision of boats, instruction and getting into touch with markets, there can be little doubt as to the importance of the most thorough and complete organisation upon up-to-date business methods. The success of the late Mr. Duthie in stimulating the Donegal fisheries, and the benefits derived from his constant supervision lead us to believe that great advantage would accrue from having two or three men stationed at different centres round the coast, especially where there are great difficulties in the way of fostering the industry, *e.g.*, in South Galway. These superintendents would be controlled and directed by the paid member of the new Board appointed on account of his expert knowledge of the fishing trade. There has been a good deal of evidence given as to the desirability of special improvements in special districts, and a number of suggestions have been made as regards questions of detail, such as changes in the terms of loans for boats, insurance, &c., but these matters can be best settled by the fishery branch of the new Board.

268. In certain centres suitable for fishing, and served by railways, the Board might lend useful assistance in establishing fishing villages, especially where an increasing number take up the industry, and where it is desirable to induce a considerable number to devote their attention entirely to fishing. Proper housing accommodation should be secured for them, and if cottages could be built, with perhaps an acre of ground for a potato garden attached, and, where possible, accommodation for a cow, perhaps on grazing land held co-operatively, it would be an immense advantage, and would remove one of the chief reasons for sub-division. The funds for this work might well be provided out of the money that can be borrowed, on Land Purchase terms, for labourers' cottages under the Act of 1906. Such a system would enable the counties under the Board's control to obtain their share of the grants in aid, available under the Labourers Act, without an undesirable multiplication of cottages for agricultural labourers, for whose services there may be no continuous demand.

See paragraph 112 (6) (*d*) and also XI. p. 111.

XLI.—Industrial Development and Technical Instruction.

269. It is evident from what has been already said that we are of opinion that the great majority of the inhabitants not only of the present congested districts but also of the extended area which we suggest should be placed under the Board, must depend on the land, and that the prime necessity in the West of Ireland is to facilitate in every way the successful promotion of agriculture. Next in point of importance, but at a great interval, comes sea fishing, of which the future developments, though hopeful, are a little speculative. The importance given, in this Report, to agriculture, and in a less degree to fisheries, is not intended to deprecate or suggest the postponement of the development of other industries, which obviously must be regarded as of great importance, since they are a necessary part of any complete development of national life. We cannot, however, regard them, at any rate at present, as an alternative remedy to what we have already suggested for the relief of congestion, since we see no prospect of an immediate development of large industries in the West of Ireland. It cannot be said that the area with which we are concerned possesses any such exceptional natural advantages for the establishment of factory industries as to make it a promising ground. Its mineral resources in coal and iron are, so far as is known, limited. Its water power is hardly commensurate with its water supply, and, though considerable water power undoubtedly exists in many districts, its distribution and local circumstances seem in many cases to render its profitable application difficult. With the exception of peat, stone and wool, most of the raw materials would have to be imported. The means of communication are not good, and freights are stated to be high, the population is scattered and, for the most part, untrained to industry. In short the conditions are such that it is not probable that any factory industry for the employment of men, not at present in existence, could be introduced into the Board's area with more hope of success than into other parts of Ireland.

270. Nearly everywhere the Commission took evidence, people expressed a very natural desire to see industries established, but they were

generally unable to give much precise information as to what industries they thought capable of successful development, having regard to existing facts, or as to what the Board could do, that might not be done without the Board. The cheapness of labour was dwelt upon as a reason why industrial development should be easy within the congested districts, but low wages do not always mean cheap labour, and poorly paid labour is often the dearest. Moreover, if this labour, for which at present there is little demand, was employed on a large scale the wages would not remain low. Remarks were sometimes made which seem to suggest that industries would readily spring up in the congested districts, if the Board would supply capital and secure the services of industrial experts. Yet there seems to be no adequate reason for doubting that capital will find its way wherever there is a reasonable prospect of a fair return, and it is hard to believe that manufacturers or other industrial experts possess secrets of success which they will reveal only under the stimulus of a salary paid by the Board. At the same time the want of industrial training and habits has seriously prejudiced the growth of industrial development. These considerations must inevitably have the effect of throwing upon the Board the necessity of deciding whether and how far it is desirable for them to enter into competition with private enterprise.

271. The moral to be drawn from these remarks, is, not that no industrial development giving employment to men is possible within the Board's area, but that, owing to the inconquerable force of circumstances, the main outlet for the activity of labour in the poor districts of the West of Ireland must be the land, and that the Board will find it best to confine its attention, as regards large industrial enterprises, to the few industries for which the West seems to afford special advantage. We have considered it desirable to draw attention to certain conditions of success which are not always duly regarded, but if a careful consideration of the business aspects of a proposed industrial development suggests that there is a fair prospect of the industry, in a reasonable space of time, becoming self-supporting, there is no reason why the Board should not give such assistance as would be commensurate with the results anticipated.

272. The industries giving employment to men for which the congested districts appear to be specially suited, either because of the ready supply of the raw material or because of their connection with the existing fishing trade, seem to be as follows :—

(1.) Boat-building, barrel-making and net-making.—A considerable demand already exists for these articles in connection with the fishing industry, and that demand will increase with the advance in fishery development which we hope will be very marked. There seems to be no apparent reason why the great majority of the boats used should not be built in Ireland, and mainly on the west coast, and the same remark applies with greater force to barrel-making. At present only about one-third of the barrels used on the west coast are made there.

(2.) Woollen industry.—The example of Foxford, and one or two proprietary concerns near the congested districts, suggest that, with assistance and organisation, the number of woollen factories might be increased up to a certain point, but great care would have to be taken by the Board in giving any assistance. Thus, they should only aid factories established at convenient centres, that is convenient for obtaining sufficient labour and supply of raw material, with sufficient water power and suitable means of communication.

(3.) Quarrying.—There can be no doubt that there are quarries containing marble, sand-stone and granite of good quality in the West of Ireland, some of which appear to be capable of being worked successfully. The Board might well make inquiries and investigations, but, as regards assistance, concentration upon two or three places should be insisted upon, and dissipation of energy, over the numerous places where the inhabitants would like to see industries established, must be guarded against.

(4.) Kelp making.—On some parts of the coast, especially Donegal and Connemara, certain classes of seaweed are collected and burnt into what

XLI.—*Continued.* Industrial Development and Technical Instruction.

is known as "kelp." From this certain products are extracted, the most valuable now being iodine, and, until the discovery of the process of obtaining iodine from Chilian nitrate, high prices could be got for kelp, and the industry was an important means of livelihood in certain parts of the congested districts. Despite a great fall in price, the kelp industry is still an important source of income in some very poor parts of Ireland, especially on the coasts of Donegal and Connemara. We think that the new Board should consider very carefully the evidence given before the Commission regarding the manufacture of kelp, and devote special attention to the preservation, improvement and development of the industry.

(5.) Peat Industries.—These industries are still in an experimental state, and it would appear that the Board would do well to follow very closely any developments that may take place, especially in Germany where the matter has been for some time receiving careful attention, since it is obvious that if means for the profitable application of peat to purposes of manufacture should be devised, it will be a matter of very great importance to the West in view of its immense bogs.

(6.) It is possible that bacon-curing factories might be started with a fair prospect of success, especially in Mayo, where there are a large number of pigs kept, as a large and steady supply of the raw material in the locality seems to be a condition precedent to success in this industry.

273. There may, be other large industries which might be suitable for introduction into or extension in the Board's new area, but to which the attention of the Commission has not been drawn. If so, they should be carefully examined from a business point of view, and, in this connection, it is only right to point out that most of the witnesses who have dwelt upon the necessity of giving assistance to industrial developments, have told the Commission that their request was limited to such industries as the Board would be satisfied had a reasonable prospect of permanent success. In conclusion we may add that in our opinion it would be useful, if from time to time careful inquiries into the possibilities of mineral development and the utilisation of water power for manufacturing purposes were made by experts employed by the Board.

274. The cottage and home industries existing in the congested districts, the great assistance they are to the inhabitants, and the help that has been given by the Board, have been considered in an earlier part of this Report. While we think that the Board should continue to foster them in every possible way, it must be remembered that, with the exception of the woollen industry, they give employment to girls only, and that there are certain dangers inherent in a great promotion or extension of them, which must always be carefully guarded against. In the first place it is to be noted that home industries in the West of Ireland, unlike those of some countries, are aimed mainly at increasing the family income rather than partly towards diminishing its expenditure. Thus in some districts, home-made articles are used but little, and practically all the lace and most of the shirts made, and much of the knitting, sewing and weaving done, in the congested districts are intended for sale outside these areas, rather than for home consumption. This of course is but one instance of the modern tendency in Ireland to depend increasingly upon shop goods rather than upon home produce.

See paragraphs 82–3.

275. Another point that has to be noted is that these industries sometimes tend to a certain extent, though in a less degree than do the factory industries in English towns, to diminish the usefulness of girls at home, by causing overmuch attention to be directed to the industry, because of the money value of such work. Hence it is important to see that lace-making classes should be supplemented by a course of domestic economy. The welcome given to lace classes and cottage industries in the congested districts is not surprising in view of the large proportion that the earnings thus made bear to the scanty income of the congests, but the danger of undue attention to these industries

may become very real, if they are to any large extent pursued by the families of farmers having economic holdings, where the dairy, the piggery, the fowl yard, and the homestead might more usefully employ the girls' time.

276. As regards the probable stability of these industries a distinction may be drawn between those which depend for their existence upon artistic merit and the dictates of fashion and those which enter into competition with the products of power-driven factories. As regards the first class it is no doubt possible for skilled workers to make comparatively considerable sums, but with every increase in the output greater attention to the markets will be required in order to preserve a proper equilibrium between supply and demand. Not only is the demand a little unstable, but it is also not capable of indefinite extension. Moreover, in such industries the Board's expenditure must be fairly large in proportion to the earnings, as the girls take a considerable time to become expert in such industries, and marriage or emigration often deprive the country of a direct industrial return on their training.

277. As regards home and cottage industries, such as machine-knitting and hand-loom weaving, which do enter into competition with power-driven factories, it is obvious that where the industry seeks to market its goods outside its immediate neighbourhood, it comes into contact with the products of power-driven factories, and suffers from the advantages possessed by such factories, in the rapidity with which large orders can be executed and in the standardisation of the products. How far these disadvantages, where they are serious, can be met by turning such home industries into small factories, as suggested by Mr. Fletcher, depends of course upon the circumstances of each case, and is a matter that seems to call for a careful and continuous supervision by the Board, and for the utilisation of expert advice. IV., p. 228.

278. As regards the work of technical instruction and its bearing on industrial development, the future relations of the Department and the Congested Districts Board will require careful consideration and delicate treatment. At present the Department operate all over Ireland in connection with what is commonly, without much precision, called technical instruction, and the Board at present operate as regards certain phases of that instruction in the scheduled areas, and presumably will be free to do so in future over their extended area.

279. Technical instruction as given in Ireland may be roughly divided into three classes. First, the work done by the Department in connection with the teaching of Drawing and Experimental Science in secondary schools; in this work they operate all over Ireland and are alone in the field. On their awards depends the distribution of portion of the grants of the Intermediate Board. Their schemes affect over 280 schools, of which four are in the present scheduled areas and thirty-six in the new area. This part of their work is wholly educational, and there has been no suggestion that they should be replaced in parts of Ireland by the Congested Districts Board.

280. The second division into which the work may be divided is the giving of technical instruction, as the term is generally understood in Great Britain, that is, instruction in the principles of science and art applicable to industries, and in the application of certain branches of science and art to specific industries. As regards this work the Department operate all over Ireland, spending a considerable amount of money, which comes partly from the Department's endowment, and partly from the science and art grants, which are elastic in amount and were formerly administered by the South Kensington Department, now merged in the Board of Education. Here again they are practically alone in the field except, so far as manual training in carpentry and domestic economy are concerned, both of which are also promoted by the Congested Districts Board.

281. The third class is what may be called, for purposes of convenience, industrial instruction, by which is meant instruction in the processes of

XLI.—*Continued.* Industrial Development and Technical Instruction.

industries themselves.* The distinction between technical and industrial instruction is not always easy to draw, and may not be very scientific, but the terms are at any rate useful to distinguish between the different kinds of instruction given. In theory, the Department are limited to giving industrial instruction in connection with technical instruction, strictly so called, *i.e.*, they are supposed to teach trade processes only as illustrating the application of special branches of science and art to specific industries, and not as part of the direct development of the specific industries. Nearly all the technical instruction given by the Board is industrial, such as lace-making, barrel-making, boat building, &c., and it has been stated that there has been, to some small extent, a certain amount of overlapping between the two bodies in the present congested areas, but it does not appear to have been serious.

282. The Board can give any sort of direct assistance to any industry, and the Department can give direct assistance to rural industries only, and merely indirect assistance to other industries, (*i.e.* by giving instruction, or paying for instruction by means of capitation grants in respect of the persons taught). Here again the distinction is hard to draw; in practice the difference sometimes amounts only to the Board giving assistance on a larger scale than the Department. The difference in their methods may be illustrated by lace classes. The Department's assistance is usually confined to paying wages to the teacher, the rent and equipment of the school being defrayed locally, while the Board defrays all the expenses and arranges all the marketing of the lace, &c. Often the same results are obtained by the Department's system of capitation grants.

283. Possibly the best means of avoiding overlapping would be for the Department in general to have the exclusive power of giving the first two classes of technical instruction, the Board intervening only after consultation with the Department; and for the Board, in its new area or the poorer parts thereof, to carry on the industrial instruction, the Department as a general rule intervening only after consultation with the Board. Obviously, in the richer portions of the new area the assistance given by the Department would suffice, and the more liberal assistance given by the Board might be reserved for the poorer districts. Unless a change should ultimately be made in the powers of the Department as regards the promotion of industries, the Board alone would assist in the direct promotion of non-rural industries. It would seem to be in many ways desirable that the Board should be empowered to nominate one or two members to the Board of Technical Instruction and to any technical instruction committees within the Board's area, in the same way as they should be empowered to nominate members to the Agricultural Board and the County Committees of Agriculture.

284. A good deal of evidence was given about the educational deficiencies in the congested districts, and suggestions were made relating to improved accommodation, the provision of meals for children, and changes in the nature of instruction. The matter is not one which we feel justified in examining in any detail, but there can be no doubt that there is great irregularity of attendance and a high percentage of illiteracy. It would be useful, perhaps, if the Board, though not in themselves an educational authority, were empowered to nominate a representative on the Consultative Committee of Education, which was established eight years ago, for the purpose of bringing the Commissioners of National Education, the Board of Intermediate Education, and the Department into close touch with one another.

* The amount spent by the Department on technical instruction in all its branches in the counties containing congested districts, excluding Cork, during the year ended 31st July, 1906, was as follows :—

Department's Endowment, ...	£5,601
Contribution from local rates, ...	£3,155
Parliamentary Grants (Secondary Schools, Primary Schools, Science and Art Classes), ...	£2,938
Total, ...	£11,694

XLII.—Constitution of Board.

285. We have already made some reference to the constitution of the Board, and indicated some modifications that we think are desirable. At present the Board consists of three *ex-officio* members, and eight nominated members, of whom three are temporary. We think the three *ex-officio* members, namely, the Chief Secretary, the Under Secretary and the Vice-President of the Department of Agriculture and Technical Instruction, should be retained. There has been no question raised as to the desirability of the Chief Secretary and the Under Secretary continuing their membership of the Board, and the presence of the Vice-President seems desirable in consequence of the close relationship that must be maintained between the Congested Districts Board and the Department of Agriculture and Technical Instruction, and also in view of the fact that we have proposed to give the Board representation on the two Boards which advise the Department and to a large extent control its expenditure. We think it would be useful for one of the Estates Commissioners to act as an *ex-officio* member. Prior to 1903, one of the Land Commissioners was, during the twelve years that the Board had been in existence, an *ex-officio* member of it. The Estates Commissioners might, we think, act in rotation, the term of office for which they should serve being determined by themselves. We are of opinion that this addition would strengthen the Board by adding a member who has had considerable experience in the work of purchase and re-sale over the greater portion of Ireland, and his assistance would be especially useful if they should seek to acquire land outside their own territory for the relief of congestion. It is also suggested that the experience that the Commissioners and the Vice-President of the Department would gain as members of the Board might be of use to them in their work of relieving congestion in the poorer parts of Ireland, outside the jurisdiction of the Board.

See paragraphs 98–101.

See paragraphs 311–20.

286. As regards the eight nominated persons who are at present members of the Board, we are of opinion that the present nominal distinction between permanent and temporary members serves no useful purpose. Moreover, as we suggest that the members of the Board should serve for only a limited period, the distinction would be of no importance under our scheme. It was urged by many witnesses that some of the nominated members should be replaced by elected members, and it was suggested that one should represent each county part of which is congested. Election seems in some cases to have been proposed mainly for the purpose of bringing the Board into close touch with each of the counties in which it worked, but this end might as well be attained by the nomination of a resident from each county concerned.

287. We have, as already indicated, after much consideration come to the conclusion that the Board should include one representative elected by each of the nine counties within the Board's new area. The reasons for our decision are analogous to those which convinced us that under the existing condition of things in Ireland, the work to be done can be more easily carried out by a quasi-independent body than by a department of Government, however efficient. The problem of migration furnishes a good example of the advantages which we think ought to be secured by having an elective element on the Board. For the relief of congestion as a whole, it is, in our opinion, absolutely necessary that the grazing land in one county should be largely utilised for the relief, through migration, of congestion in other counties, and there may be considerable local opposition. If these migration proposals emanated from a body partly elective, we think that opposition would meet with far less sympathy and support than if the proposals emanated from a Government department or a nominated Board, which it might be urged was not representative of Irish public opinion, and which might be decried as a semi-official, perhaps alien, body who were not responsible to the people, and in whose composition the people had no voice. If the representative on the Board of any particular county was not convinced by his experience of the necessity of viewing the problem from a national rather than a local point of view,

See paragraph 101.

See paragraph 100.

XLII.–*Continued.* Constitution of Board.

it is true that he might use his influence in his own locality against migration. We doubt whether in that case his opposition would be any more influential than if he were not a member of the Board, or only a nominated member. On the other hand, if convinced of the necessity of disregarding parochial points of view, he would have much greater influence in promoting a healthy public opinion on the matter, and in reconciling his neighbours to the introduction of migrants than he would as a private individual or a nominated member of the Board.

288. One of the chief objections urged against election is that an elected member might feel that it was his duty to get as much as possible for his constituents rather than to do what was best for the whole territory of the Board, and that his re-election might largely depend not on his efficiency but on his success in securing local advantages. On the other hand it is obvious that the similar efforts of the eight other elected members would neutralise the action of the one: though then the result might be that money would be spent in each county in proportion to the population, or valuation, or some other test, which might prevent desirable temporary concentration in certain areas. Against this tendency the more detached point of view of *ex-officio*, nominated and paid members might be useful.

See paragraph 243.

289. We are of opinion that the County Council would form the best electoral college (with the modification already indicated as being necessary in the case of County Cork) and their choice should not be confined to members of their own body. We desire to place on record our conviction that the future success of the Board must largely depend upon the County Councils choosing the very best men available, and we believe that the trust reposed in them will not be misplaced.

290. We are also of opinion that there should be four nominated members on the Board who may have economic or other special qualifications enabling them to add a useful breadth of view to the outlook of the Board. It might moreover be useful that the Government should thus have the power of nominating one or two members who have special knowledge of districts that required special attention. Finally we think, as already indicated, that there should be three paid members on the Board, appointed by the Crown or by the Lord Lieutenant for their special knowledge of the work of land re-settlement, fisheries and industries.

See paragraph 101.

291. The elected and nominated members should hold office for six years, and be eligible for re-election or re-nomination. The paid members should be appointed for a period of ten years, but should be removable by the Government on a representation from the Board that their removal was desirable. They should at the end of the ten years be eligible for re-appointment.

292. We are quite conscious that there is much to be said against a Board composed of so large a number as twenty, but it seems impossible to avoid having nominated, *ex-officio*, and paid members, or to have less than one elected representative for each county. Under no scheme that can be devised, having regard to the various elements that we think should find a place in the new Board, would it be possible, considerably, to reduce the number of members.

293. The inconveniences attached to the fact that the Board is not a corporation were pointed out by their Solicitor, Mr. O'Connor, and we see no reason why his suggestion that the Board be made a corporate body should not be adopted. It would undoubtedly prove a great advantage in carrying on the administrative work of the Board. We have already alluded to the fact that continuous day-to-day administration, which is one of the great advantages possessed by a department, as contrasted with an unpaid Board, will to a considerable extent be secured by the appointment of three paid official members.

III., p. 284.

See paragraph 101.

294. It was suggested that the County Committees, in addition to their statutory functions in connection with agriculture and technical instruction, should act as advisory committees under the Board, with power to appoint sub-committees in smaller areas. There is, however, some danger in unnecessarily duplicating advisory bodies, and we think that the utilisation of local bodies might well be left to the discretion of the Board with its local representatives. Our own inquiries have led us to believe that the Board, in order to maintain its knowledge of local views and local conditions, should arrange, through committees or otherwise, to hold inquiries in the various congested districts, at frequent intervals, and that representatives from the County Councils and other local authorities, as well as private individuals, should be invited to attend such inquiries.

XLII.—*Continued* Constitution of Board.

XLIII.—Money necessary for carrying out the Recommendations made.

295. We think that the Board should be equipped for buying and re-selling, on the average, land to the value of £1,000,000 each year, and that it will be necessary for the Board to hold an average estate for not less than two years. We examined the Secretary and the Chief Land Inspector of the Board as to the funds required for dealing with this amount of land, and for carrying on the work of the Board in the extended area, over which they will operate. On page 52 of the Appendix to our Eleventh Report, a table is given showing the present expenditure of the Board's income, and an estimate by their Secretary of the expenditure necessary if our recommendations are adopted. The several items are, of course, only approximate and will vary in amount as the several stages of the Board's extended work are reached. Our object in referring to the matter now is to indicate that the probable cost of carrying out our recommendations should not exceed about £300,000 a year during the period of the Board's operations as compared with their present income, *i.e.*, £86,250. It may be useful to offer explanatory remarks on some of the items in the table which may be summarised as follows :—

See paragraphs 223 (*c*) and 227.

	Present.	Proposed.
(1.) Cost of administration :	£	£
(*a.*) Land work, ...	25,000	66,000
(*b.*) General work, ...	11,000	12,000
Total, . .	36,000	78,000
(2.) Interest on borrowed money, . . .	3,500	8,750
(3.) Loss on estates, ...	11,000	150,000
(4.) Agricultural work, ...	2,300	23,000
(5.) Other work—fisheries, industries, parish committees, steamer services, piers and roads,	33,450	55,700
	86,250	315,450

296. As regards administrative expenses, it may be noted that if the Board's work were done by a Government Department, the cost of administration would be defrayed from money annually provided by Parliament, and it would be unnecessary to give any estimate of the probable cost, as that would be settled in the ordinary way between the Treasury and the Department concerned, subject, of course, to Parliamentary review, though, of course, the cost in either case would fall on public funds. In connection with the cost of administration, it is important to note that as the Board is not, strictly speaking, a Government Department, but is regarded rather as a temporary Commission, very few of its officers have permanent tenure or right of pension. There can be no doubt that this fact has considerably handicapped the work of the Board, and has prevented them in many cases from obtaining the services of men of the same class as are available

See paragraph 22.

XLIII. *Continued* Money necessary for carrying out the Recommendations made.

for Government Departments. Many promising officials in the Board's office have not been content with the career it offered, and have sought more attractive permanent posts elsewhere. In addition to the disadvantage arising from too frequent changes in staff, consequent upon appointments not being of a permanent nature, there are disadvantages in having important positions occupied by temporary clerks. If it is found impossible to place the more deserving of the Board's present and future officers on the footing of civil servants, though it is not quite clear why this should be so in view of the powers conferred by the Congested Districts Board Act of 1894, we are of opinion that the establishment of a superannuation fund and of a system of gratuities on retirement, in proportion to length of service, would be advantageous.

See 57 & 58 Vic., c. 50, sect. 3 (1).

297. As regards the increase in the staff necessary for carrying out the land work of the Board their Chief Land Inspector estimated that the present establishment was adequate for buying and reselling £300,000 worth of land each year, and that between twice and thrice that staff would be required for dealing with one million's worth of land. Provision has also to be made for the administrative cost to the Board of passing through, without treatment, estates, or portions of estates, up to a maximum value of £500,000 a year. It is estimated that an increase of £1,000 will be required to meet the extra cost of general administration (*i.e.*, of work other than land work) due to the extension of the Board's area, and to its increased work in certain respects.

XI., Q. 60,011, *et seq.*

298. The second item represents the interest at 3½ per cent. on £100,000 at present, and in future on £250,000, which has to be borrowed in order to make improvements and loans, but which is ultimately repayable. The inability of the Board to borrow more money at present is one of the causes which has led to the present financial crisis in the Board's affairs, which we have already discussed at considerable length. Instead of providing the annual sum of £8,750 to meet the interest charged the Board might be given a floating capital of £250,000.

See paragraphs 49 & 54.

299. As regards the fourth item, the increase is partly nominal, as the Department has been finding out of its reserve fund £10,000 during each of the last two years to supplement the Board's contribution to the work of agricultural development. The portion of that fund hitherto available is now exhausted, and, consequently, even if no change were being made in the constitution or powers of the Board, a grant would be required for this work. The addition of £23,000 required for agricultural development might be put upon the Department's parliamentary vote, if desired, instead of on the Board's endowment.

300. As regards the fifth item, the increase estimated is necessarily very tentative. To double the Board's area would not necessarily involve doubling the expenditure, as the districts to be added are much better off than the present scheduled districts, though on the other hand some of our recommendations regarding fisheries and industrial development will increase the rate of expenditure. It should be noted that of the total increase in this item £8,000 is in respect of Parish Committees, which we regard as a source of temporary expenditure mainly in connection with the resettlement of estates.

301. The heaviest item in the estimate is number three, viz., £150,000 for loss on estates. This requires careful examination. The loss and varying estimates of its amount have been discussed in paragraphs 40–9 of our Report, and in the correspondence between the Congested Districts Board and the Treasury, which will be found in the Appendix to our First and Eleventh Reports. Mr. Doran, in his evidence, put the price of the land, bought under the 1903 Act, and resold or ready for resale, at £317,639, the total amount spent in improvements at £81,249, and the total net loss at £41,152 or 12·9 per cent.

I. pp. 247–62.
XI., pp. 112–29.
XI., Q. 59,561, *et seq.*

302. The land sold consisted of three classes :—

A, poor tenanted estates, on some of which a certain proportion was untenanted land; these estates cost 76·1 per cent. of the total cost, and the loss on resettlement was 9·4 per cent. of their cost.

B, very poor tenanted estates, with little untenanted land; these cost 15·6 per cent. of the total purchase money, and the loss was 21·6 per cent. of their cost.

C, estates mainly untenanted and used for the relief of A and B, especially A; these cost 8·3 per cent. of the total, and the loss was 28·8 of their cost.

303. The proportion of estates bought classed as A and B was 76·1 and 15·6, respectively, *i.e.*, there was close on five times as much A land as B. Mr. Doran thought that B land bore a greater proportion to A land than this, in the unsold parts of the scheduled districts, but a smaller proportion in the districts now to be added to the Board's area. He advocated the purchase of a larger proportion of untenanted land in future, and suggested that of the £1,000,000 of land to be bought by the Board in future years, 33 per cent. might be C, 10 per cent. B. and 57 per cent. A. It is obvious that the proportion of the different classes of land to be acquired in any year must depend on the nature of the land available in the Board's area. For instance, if class B were less than 10 per cent. of the total amount, the Board would find after a time that the land awaiting purchase would consist solely of classes A and C.

XI., Q. 59,819, *et seq.*

304. Apart from this difficulty, we think that the estimate of C required is not excessive, although a considerable amount of untenanted land will be contained in classes A and B. The percentage of the total land in each class, that was untenanted was as follows :—

A land, about 22 per cent. in area and value.

B land, 9 per cent. in area and 11 per cent. in value.

C land, 89 per cent. in area and 95 per cent. in value.

Of the total amount of land (A, B, and C), about 20 per cent. in area and 23 per cent. in value was untenanted.

305. Mr. Doran pointed out that this proportion of untenanted land on the estates already purchased had proved quite inadequate for raising the holdings to an economic standard. If the land bought in future is approximately in the proportions suggested by Mr. Doran, namely, 57 per cent. A, 10 per cent. B, and 33 per cent. C, it is evident that the percentages (of the total land) untenanted in each of the three classes will be as follows :—

See XI., p. 42.

Class A about 11·5 per cent.,

Class B slightly over 1 per cent.,

Class C 31·5 per cent.,

giving a total of about 44 per cent. of untenanted land. If the Board purchase only untenanted land and poor estates, or poor portions of estates, the figures given in an earlier part of the Report (dealing with the size of the problem), show that such a proportion of untenanted land would be by no means excessive.

See paragraph 113

306. Mr. Doran's estimate of the loss to be sustained was as follows :—

XI., Q. 59,821.

33 per cent. of the total land bought would be C—£333,333.		
On this the loss at 30 per cent. would be		£100,000
10 per cent. of the total land bought would be B—£100,000.		
On the loss at 20 per cent. would be		£20,000
57 per cent. of the total land bought would be A—£556,667.		
On this the loss at 5·3 per cent. would be		£30,000
Total	£1,000,000	£150,000

XLIII. *Continued* Money necessary for carrying out the Recommendations made.

It will be noticed that Mr. Doran estimates for a slight increase in the rate of loss on C, which he attributes to the fact that, in operating on a large scale, the Board would acquire untenanted land at a greater distance from the centres of population, and that consequently the cost of labour for equipping these holdings would be greater.

307. We are not convinced that this would be the case. There has been no loss on grass land where it was near the tenanted holdings and could be given in enlargements. The loss was incurred in effecting migration, and was swollen by the fact that, owing to the Board's limited powers of acquiring grass land, they could seldom give a sufficiently good holding to induce a substantial farmer to migrate, and the migration of small men is, as already explained, very much more expensive. In future the compulsory powers of the Board will often enable them to get land in the vicinity of the congested holdings, instead of having to go far afield, and enlargements, so far as convenient land is available, can thus be effected with little or no loss. In the next place the Board will be in a position by their compulsory powers to provide large migrants with attractive holdings, and thus obtain a better and less expensive class than hitherto. This ought materially to diminish the cost of utilising untenanted land. Hence, apart from any changes in the price of land, the actual rate of loss on C should be less and not more than in the past, and the average rate estimated by Mr. Doran on all the purchases of the Board (15 per cent.) should be capable of some reduction. Mr. Doran estimates for the future a slight reduction in the rate of loss on A and B land. This is due to the fact that the general average of tenanted estates to be treated by the Board in the new portions of their area is of a character requiring less remedial treatment than that of tenanted estates in the present scheduled areas.

See paragraph 32.

308. It is difficult to form any trustworthy estimate on the basis of an arbitrary classification of estates, and the following is perhaps a simpler way of stating the case. On all the land bought since 1903, and resold or ready to be resold, the average loss has been 12·9 per cent. The greatest loss has been on the untenanted land, and more untenanted land must in future be acquired. This would tend to increase the future average rate of loss. On the other hand the average rate on untenanted land may not be as great in the future as in the past, though it is unlikely that this reduction will be large enough to extinguish the increase in cost arising from the larger purchase of untenanted land. Against the net increase of total loss on the untenanted land, there should be a reduction in the rate of loss on both classes of tenanted estates (A and B), owing to the better quality of the greater part of the new portions of the Board's area. This would reduce if it did not extinguish the net increased loss due to the larger purchase of untenanted land. On the whole, we do not think that the Board's loss on the re-settlement of estates costing £1,000,000 can be safely put, on the average, at less than £130,000.

309. The reduction of £20,000 which may be effected in Mr. Doran's estimate of the loss on estates and the transfer to the Department's vote of the £23,000 required for agricultural development would bring the estimate of the annual cost of the Board to £272,450 instead of £315,450 as shown in paragraph 295. As the money is to be spent in removing an evil of long standing, and as it is hoped that the expenditure will be largely reproductive, and might therefore be borne in part by future generations, it may be thought just to spread the liability for loss over a long period. In such a case the following arrangement is suggested. Out of the annual issue of stock for the purpose of land purchase £1,130,000 should be assigned to the purchase and resettlement of estates dealt with by the Congested Districts Board within their area (in addition to £500,000 to be assigned for the purchase of estates not needing treatment by the Board). Of the £1,130,000, the purchasing tenants would repay £1,000,000 by the ordinary land purchase annuity of 3¼ per cent., and the balance of £130,000 would be re-paid by an

See paragraphs 223 (*c*) and 227.

annuity of 3¼ per cent. to be placed on the Parliamentary votes. In this case, the annual sum to be paid to the Board would be £130,000 less than the sum already mentioned; *i.e.* the income required would be £142,450 or an increase of £56,200 on its present income. It may be noted that the method suggested for meeting the money lost upon land improvement is identical with the method in which the liability caused by the payment of the bonus of 12 per cent. is met, and with that by which the loss on "congested estates" is, under section 43 of the Act of 1903, to be met.

XLIII. *Continued* Money necessary for carrying out the recommendations made.

310. All our estimates of the loss to be incurred by the Board are based upon the assumption that a bonus of 12 per cent. will be available as heretofore. At present when the Board agree to buy an estate from a vendor for £100, the latter knows that a bonus of 12 per cent. is available, and, consequently, that the price he is to receive is really £112, though the Board (and ultimately the tenants), are responsible for £100 only. Thus the bonus forms three twenty-eighths, or nearly 11 per cent. of the total purchase money. It is sometimes said that the bonus was intended in part to meet the costs of sale, but it is no more ear-marked for this purpose than any other part of the purchase money. In point of fact the only characteristic peculiar to the bonus is that, in the case of a settled estate, it may be paid over to the tenant for life for his own use, whereas he is entitled only to the interest on the rest of the purchase money. Where the Board in future acquire land through a voluntary sale, we do not think that any change should be made as regards the payment of the bonus. Where the price is settled by compulsion the *raison d'être* of the bonus—the inducement to sell—disappears. Moreover, the costs of the sale will be borne by the State. The total purchase money the landlord is to receive will be that settled in accordance with the scheme previously outlined. He will not receive, in addition, a bonus, and there is no reason why part of the price should be treated as bonus, belonging absolutely to the tenant for life, and only the balance as purchase money in which he has but a limited interest. One-eleventh of the total price payable under compulsion should come from the Land Purchase Aid Fund, the source of the bonus in voluntary sales, and the Board should be responsible for the repayment of only the remaining ten-elevenths.

XLIV.—Relief of Congestion outside the Board's Area.

311. We held sittings in every county, part of which is congested, and in every other county from which a request had been received within eight months from the date of the appointment of the Commission, but we have not investigated, even cursorily, the circumstances of every district throughout Ireland which may stand in need of exceptional treatment. We, however, both heard and saw sufficient to convince us that in some counties besides those containing scheduled districts there are considerable areas of agricultural congestion, and in many others there are scattered spots standing in need of relief.

312. We have already recommended that the Board should confine its attention to its new area, and that the work of relieving congestion elsewhere should be carried out by the Department of Agriculture and the Estates Commissioners. The Department can, with the agreement of the County Committee, arrange for special treatment for any locality in any county, through the agency, where advisable, of a special local committee, and they can themselves carry out any supplementary schemes which it is possible to undertake with the funds at their disposal. The Estates Commissioners can buy land under section 6, re-settle and re-sell it to the tenants, the cost of the improvement being met by an addition to the purchase annuity or defrayed as grants out of the reserve fund. This fund, however, is small and is already mortgaged to a considerable extent. If the estate is declared "congested," a loss may be incurred not exceeding 10 per cent. upon the aggregate price of all such estates dealt with in that financial year, and this loss is ultimately defrayed by money voted by Parliament.

XLIV.—*Continued.*

Relief of Congestion outside the Board's area. See paragraphs 7 and 102-4

313. Two points require further consideration. First, what are the places that need special treatment, and secondly, what, if any, changes in the existing law are required to enable the two bodies mentioned adequately to relieve such areas. We do not attempt to frame a definition for ascertaining the districts that stand in need of special treatment. We have pointed out the difficulties in the way of framing any adequate definition of congestion, or of devising any test that would be of practical use in selecting the districts that require treatment, and we are not in a position to indicate the places by the process of enumeration. The best course will be to leave the matter to the discretion of the two Departments concerned. Some of the information that is contained in our publications, should prove of considerable use, *e.g.*, the evidence taken in Down, Antrim, Tyrone, Cavan, and Queen's County, and statistics that have been published, showing the average valuation per head of population in all the rural districts and in the poorer electoral divisions in Ireland, and also those showing the number of various-sized holdings in each electoral division in Ireland, classified according to valuation, the area and valuation of the land in each class, and the population that is living on it. Probably the best guide will be the reports of the Inspectors of the Department, the Land Commission and the Local Government Board. Moreover, the representatives on the County Council of specially poor areas can always bring to the notice of their Council and of the County Committees the needs of such areas, without any reason to fear want of sympathetic co-operation ; and the representatives of the County Council on the Council of Agriculture can emphasise these needs if they be of opinion that there is any neglect on the part of the Department.

First VII., pp. 1–165.
I., pp. 356–8.
Second VII., pp. 1–400.

314. As regards the question, whether the powers of the two bodies require enlargement : the Department has already very full powers of developing agricultural and rural industries, but it has no direct power to develop non-rural industries, though it may give useful assistance by means of technical instruction, a fairly elastic term. The question whether it is desirable to give the Department power to promote non-rural industries all over Ireland (and the funds necessary for so doing), does not come within the terms of our reference, but we are of opinion that if the Department were given these powers as regards indefinite poor areas, while precluded from exercising such powers in the rest of Ireland, a very awkward situation might arise. It is evident that the Department will require funds for carrying out supplementary schemes of agricultural development and technical instruction in the poorer districts needing special treatment. We have no means of estimating the amount required, but it is obvious that a sufficient sum should be provided to enable the Department to start special remedial treatment in the districts where it is most needed.

315. As regards the re-settlement of land, the Estates Commissioners when they buy a property have fairly adequate powers for dealing with it ; but difficulty arises in connection with direct sales from landlord to tenant, especially when the terms fall within the zone limits. In such cases the Commissioners have no power of withholding their sanction to the sale, at the terms agreed upon between landlord and tenant, of holdings in rundale or intermixed plots, or holdings otherwise uneconomic, unless they decline to declare the property an estate. Their powers in this respect are somewhat indefinite, and have apparently been curtailed by the decision in Weir's estate ; but sufficient time has not yet elapsed to enable us to gauge the full force of the changes in procedure that may be necessitated by that decision. In any case, it seems absurd that the Commissioners should be obliged to refuse to declare a property an estate in order to prevent a few uneconomic holdings being stereotyped. Where a direct sale does not fall within the zone limits, the Estate Commissioners can, if they think fit, refuse to sanction the advance of the purchase money of any holding unless they are satisfied with the security and consider the agreed price equitable. Where the sale is not direct, but to the Estates Commissioners, they are free to buy untenanted land or otherwise improve the uneconomic holdings. The difficulty in this case is that they must recover from the tenants nearly all

See. 42 Ir. L. T. R. 35.
See footnote p. 76.

their expenditure, as the only fund at their disposal out of which a loss can be incurred is the reserve fund, which is small and already largely hypothecated.

XLIV.—*Continued.*

Relief of Congestion outside the Board's area

316. If, however, the estate is, with the consent of the owner, certified as a "congested estate," the Commissioners may, with the consent of the Lord Lieutenant, incur loss upon their dealings with the estate up to a certain limit, which loss will ultimately be met out of the Land Commission Vote. No such loss has been as yet incurred owing to a difficulty in the interpretation of section 43, sub-sections (2) and (3) of the Act of 1903. The matter was exhaustively considered in the judgment of Mr. Justice Meredith in Warden's case, and the effect of the decision appears to be that the enhancement of the re-sale price, consequent on expenditure on improvements, which would entitle the Estates Commissioners to claim recoupment, from the Parliamentary vote, of money spent out of the reserve fund, is to be calculated from the price at which the estate would have been sold if unimproved, and not from the price that was paid to the vendor. It appears that the Treasury did not acquiesce in this decision, and proposed to appeal against it, but the appeal has not been prosecuted. The question, however, is not yet satisfactorily disposed of, and no Treasury Rules have been issued making provision for the carrying out of recoupment pursuant to this decision. We are of opinion that it should be made quite clear that the loss capable of recoupment (up to a limit of 10 per cent.) may be incurred only on the improvement of the estates, and not by selling them in their unimproved condition at 10 per cent. less than the price paid to the vendor.

40 Ir. L. T. R. 104.

317. It has been suggested that the present definition of a "congested estate" should be amended.* In the first place, it is evident that there may be a large number of holdings under £5 valuation on an estate which should not pass unimproved, though they do not form anything like half of its total area. We have not received any evidence showing what would be a more suitable proportion, or what would be the effect of decreasing the proportion to, say, a third or a quarter. Moreover, £5 rateable value seems in general too low a standard. In the next place, the fact that half an estate consists of mountain or bog land is in itself no indication of its poverty. If that mountain or bog land is appurtenant to holdings of better land, its presence may make the condition of the estate satisfactory. Again, it is not clear why, if a considerable portion of an estate, though less in area than a quarter of the total, is held in rundale or intermixed plots, it should be allowed to pass from landlord to tenant without re-striping. We have had no evidence to show how many estates come within the present definition of a congested estate, or how many more would be brought in by any particular change in the proportions specified.

318. It has also been suggested that the necessity of obtaining the consent of the owner, before the Estates Commissioners can declare as "congested" an estate which satisfies the definition, has prevented them from dealing with estates, under section 6 (4) and section 43, which should be treated as "congested," and that, therefore, the owner's consent should no longer be essential. We learn from the Estates Commissioners that, as regards sales to them under section 6, the necessity of obtaining the owners' consent has not caused any difficulty, because if he does not give his consent, the Commissioners need not buy the estate, and if he is satisfied with the price offered by them, he has no object in refusing his consent. As regards direct sales the Estates Commissioners considered that the circumstances are different. If the tenants have entered into agreements to purchase, then, unless the Commissioners are prepared to purchase the estate at the sum of the prices agreed upon, the owner may decline to consent to the estate being declared "congested," first, because the result would be to remove the estate from the

* A "congested estate" is defined as an estate not less than half of the area of which consists of holdings not exceeding £5 in rateable value, or of mountain or bog land, or not less than a quarter of the area of which is held in rundale or intermixed plots. 3 Ed. VII. c. 37, Sect. 6 (5)

XLIV.—*Continued.*

Relief of Congestion outside the Board's area.

operation of the zones, and secondly, because he would have to change the sale from a sale direct to the tenants by himself to a sale to the Commissioners under section 6, and the price of it would be that offered by the Commissioners, and not that arranged by himself, and he would then have to accept this price or let the sale fall through. This difficulty has prevented the Commissioners declaring estates congested, which, if the landlord's consent were not necessary, they would have so declared. For the above reasons the Estates Commissioners have not generally pressed the matter on owners and have no record of absolute refusals.

319. The effect of dispensing the consent of the owner would be to withdraw all estates that satisfied either the existing, or any amended, definition from the operation of the zones, and it is impossible to estimate the number of estates that would be affected by this change. The simplest method of preventing uneconomic holdings or holdings in rundale or intermixed plots from being stereotyped, would be to empower the Estates Commissioners, on the sale of an estate direct from landlord to tenant, to exempt from the operation of the zones any holdings in rundale or intermixed plots, or under £10 valuation, if they consider it necessary to enlarge or otherwise improve these holdings before vesting. Where the sale, though direct, does not fall within the zone limits, they should be empowered to refuse advances as regards such holdings unless they think that, having regard to all the circumstances of the district, the vesting of such holdings in their existing state is unobjectionable or unavoidable. We recommend that they should be given these powers, whatever proportion of the entire estate such holdings form. The sale of the remainder of the estate would be unaffected. We further recommend that the Estates Commissioners should be given the same power as has been proposed for the Board of incurring a loss upon the re-sale of such holdings, and of any untenanted land acquired for the enlargement of such holdings. We estimated in the case of the Board that a loss of 13 per cent. would be sufficient for this purpose, and we recommend that any loss up to this limit incurred by the Commissioners should be defrayed out of the Parliamentary votes in the same way as any loss incurred on the re-settlement of a "congested estate."

See paragraph 308.

320. It was suggested that the Estates Commissioners should be given compulsory powers for the acquisition of the untenanted land necessary to relieve uneconomic holdings, but the evidence given has not satisfied us that such powers are required for this purpose. Compulsion is necessary, we consider, within the Board's area mainly because every acre of suitable land is required. The area over which we recommend the Commissioners should continue to operate contains a much smaller proportion of holdings under £10 valuation and a much larger proportion of untenanted land than does the Board's area. Moreover, it probably will not be necessary to enlarge as many of the holdings under £10 valuation in the area to be assigned to the Estates Commissioners as in the area to be assigned to the Board, since such holdings are more sporadic in the former than in the latter area.

XLV.—Miscellaneous Questions.

321. We received considerable evidence on two important questions, as to which we offer no specific recommendations. In the first place, our attention was called to the lack of adequate transit facilities in many parts of Ireland, and to the high rates charged. It would be impossible to consider the position of the congested districts in this matter apart from the rest of Ireland, and the question calls for more detailed attention than we could give it. Moreover, it is at present the subject of inquiry by the Viceregal Commission on Irish Railways. The other question to which we refer is the Finance of Land Purchase; it also has been the subject of a special inquiry, and is at present occupying much public attention. As it is a matter affecting interests much wider than the relief of congestion, and is not peculiar to the congested districts, we do not make any recommendations.

322. One of the best results achieved by the parish committees is their success in staying the progress of, and preventing, fever, diphtheria, and tuberculosis, by providing sanitary homes for the smaller householders. But there is another beneficent organisation which the Board has been able, in a small measure, to facilitate, and which has for its immediate object the alleviation and cure of sickness and disease, namely, Lady Dudley's scheme for the establishment of district nurses in the poorest parts of Ireland. Many witnesses have borne the strongest testimony to the effect of their presence among the sick poor in the districts which have the inestimable advantage of their admirable services. The effect, moreover, of these nurses on the homes of the poor, and on the utilisation of their little resources, especially to meet the emergency of sickness, is a benefit second only to their ministrations in time of illness. We have been greatly impressed by the humanising influence of the beneficent work done by the nurses, all of whom have been trained to their special duties by the "Queen Victoria Jubilee Institute for Nurses." The services of nurses trained by this institution can be obtained by any district in the United Kingdom on the payment or guarantee of at least £100 per annum, but the congested districts are wholly unable to provide anything approaching the amount required, which, on the average, is £126 per annum. Had it not been for Lady Dudley's scheme the poorest parts of the West of Ireland could have derived no benefit from the supply of nurses trained by the Jubilee Institute. By means of the funds collected by Lady Dudley, through private subscriptions from the charitable and philanthropic, it has been possible to place nurses at eighteen centres in the congested districts. This scheme, which has so marked an educational side on the best practical lines, has been assisted by the Board to the best of their ability, considering the limitations of their resources, by erecting houses for the nurses, and charging only a low rate of interest on the outlay. With a greater income more liberal assistance might well be given, in the interest of relieving and uplifting the poorest and most remote districts in the Board's area, to a project which owes its origin to the thoughtful beneficence and untiring exertions of Lady Dudley.

XI., p. 53.

XLVI.—SUMMARY OF CONCLUSIONS AND RECOMMENDATIONS.

1. The great majority of the people in the congested districts and neighbouring areas are dependent on the land for a living (9).

2. The majority of the holdings in the West of Ireland are inadequate for the support of the occupiers, and their enlargement is a condition precedent to any marked agricultural development (8, 9, and 96).

3. The efforts of the Congested Districts Board in this direction have been well advised, and in an extension and development of their work lies the best hope of a satisfactory re-settlement of the congested and adjoining areas (96).

4. The Board should be continued and charged with the relief of congestion in the Province of Connaught, the counties of Donegal, Kerry, Clare, and the four rural districts of Bantry, Castletown, Schull, and Skibbereen in Co. Cork (97-107).

5. In order to obviate as far as may be possible the evils of dual administration, the Board should have exclusive control over land purchase within their new area, and no estate, or part of an estate, should pass by direct sale from landlord to tenant except with their consent (98-101, 152, and 219-23).

6. The work of relieving congestion outside this area should be entrusted to the Land Commission and the Department of Agriculture and Technical Instruction (108 and 311-2).

XLVI.—*Continued.*
Summary of Conclusions and Recommendations.

7. The enlargement of the small holdings within the Board's new area involves a large scheme of migration and the acquisition of most of the untenanted land at present in the hands of landlords, and part of large holding held by tenant-purchasers and tenants within the same area (96 and 119-22).

8. We roughly estimate that to raise to an economic standard the holdings within the Board's area which call for such treatment, will involve the acquisition of additional land with an annual valuation of £450,000, and, so far as we can estimate, the amount of land within the same area that can be made available will be hardly sufficient for the purpose (109-13 and 119-23).

9. As the amount of land available for the relief of congestion is limited, and as the greater part of the area requires resettlement, the Board should have power of acquiring land by compulsion where voluntary negotiations fail, provided that they, by formal resolution in each case, declare that such land is necessary for the relief of congestion (114-6).

10. Compulsory powers should apply to a landlord's interest in any tenanted property, to untenanted land (with certain exceptions), to non-residential holdings whether held by a tenant or a tenant purchaser (unless they are *bona fide* worked in conjunction with a residential holding in the occupation of a person whose principal business is farming), and to the excess of any holding or holdings held by one tenant or tenant purchaser above £100 valuation. The Board should have powers for the compulsory allocation of turbary and also for the re-arrangement of holdings on estates they buy (114–8 and 198–204).

11. The procedure that the Board should follow in acquiring land is set out in paragraphs 152-7, 198-205, and in note A, pp. 117-24.

12. Owing to the limited amount of land available, the provision of holdings for landless men, or the enlargement of existing holdings beyond the minimum economic standard will lead to the perpetuation of congestion and therefore are to be avoided (124-31).

13. Our opinion as to the economic effect of breaking up and redistributing grass lands amongst small occupiers, and as to the probable agricultural future of such men, is indicated in paragraphs 132-51.

14. The price to be given for land taken compulsorily is such a sum as after paying off all charges suitable for redemption by the State will yield the landlord his "average net profit income" (160-88), compensation for sporting rights being included if such rights are acquired (160 and 191), and allowance being made for the effect of existing economic or natural causes on the probable receipts of the next five years (160 and 187).

15. The Court should have power to award a sum in respect of the Equity of Redemption in cases in which they consider the right of any real value (173-9).

16. The rate of interest at which the average net income should be capitalised should be the actual rate obtained by the National Debt Commissioners from investment in authorised securities of as much money as is required for this purpose (192-5).

17. Where proof of average net income is not available, the price should be such sum as the Court may consider the full value of the interest to be acquired (189-90 and 198-203).

18. All questions arising out of the price paid for land compulsorily acquired, or as to whether the land is exempt from compulsory acquisition, should be decided by a Court consisting of one of the present legal sub-commissioners of the Land Commission, assisted by two lay assessors, with an appeal to the Judicial Commissioner or to such other tribunal as Parliament may determine (196-7, 198 and 204).

19. All costs properly incurred in connection with the compulsory acquisition of land should be defrayed out of money voted by Parliament (206).

20. Uneconomic holdings already vested in tenant purchasers should be improved as far as is practicable (207–9).

21. The Board should be given certain powers of intervention as regards estates or holdings within their area which are the subject of incomplete purchase negotiations (210–6).

22. The Estates Commissioners should continue to do the work of reinstating evicted tenants within the Board's area up to a certain stage (217–8).

23. Our estimate of the amount of land purchase to be effected by the Board and of the time required for their operations is contained in paragraphs 224–7.

24. The existing restrictions upon the sub-division, sub-letting or consolidation of holdings bought under the Land Purchase Acts should be extended (228–35).

25. The work of agricultural education and development, which we regard as of supreme importance should be carried out by the Department of Agriculture and Technical Instruction in consultation with the Board, who should be empowered to nominate two members to the Agricultural Board (140, 236–43).

26. As the funds of the Department were assigned only for the non-scheduled districts of Ireland, and as an extended system of migration will necessitate detailed treatment, the sum of £23,000 should be provided for this work (244).

27. Drainage and afforestation, which require treatment on a large scale, should be under the control of central bodies with local branches, linked on to or associated with the existing local authorities (247–51).

28. The preservation of sporting rights is in certain districts, a matter of public importance (249).

29. Parish committees should be temporarily continued for the purpose of carrying out work similar or analogous to what they already do, and provision should be made for the maintenance of improvements (250–2).

30. Certain improvements should for a time be exempt from taxation (253).

31. Agricultural organisation on a co-operative basis should be encouraged by the Board especially for the marketing of produce (254 and 258).

XLVI.—*Continued.* Conclusions and Recommendations.

32. The power of small occupiers to mortgage their holdings should be restricted, and excessive indebtness relieved, by an application of the Homestead Law or by amendment of the Irish Bankruptcy Laws: and the present system of rural credit should be re-organized by the extension of co-operative credit societies, and the establishment of Land Banks (254–8).

33. After agriculture, the development of the sea fisheries off the western seaboard seems to offer the best hope of improving the condition of the people, and should be vigorously carried out by the Board (259 and 266).

34. Efforts should be made to induce fishermen to devote themselves continuously to the work of fishing, and to follow the fish round the coast (260–3).

35. Special treatment is necessary for the development of the fishing industry in the middle west (263–6).

36. The Board should aid in the establishment of fishing villages in suitable centres (268).

37. The possibility of the development of large industries in the West seems to be limited, but probably the Board can be of much use in carrying out inquiries and supplying expert advice in addition to other intervention (269–71 and 273).

38. Boat-building, barrel-making, net-making, the making of woollen goods, quarrying, kelp-making, industries connected with peat, and bacon-curing, offer the best prospect of industrial development on a large scale, either because of the local supply of the raw material or because of the connection of the industries with the fishing trade (272).

39. The further development and extension of cottage and home industries, whilst most useful, must be carried on with great circumspection (274–7).

40. The respective functions of the Board and of the Department, and their future relations within the Board's area in the work of technical instruction, require delicate adjustment. This might be facilitated by the Congested Districts Board being empowered to nominate two members to the Board of Technical Instruction (278–83).

41. The Board should consist of twenty members—four *ex-officio*, three (to be paid) appointed by the Crown, four nominated by the Crown, and nine elected by the county councils. The paid members should hold office for ten years, the others for six years, and they should all be eligible for re-appointment or re-election (285–92).

42. The Board should be made a corporation, and should hold frequent local inquiries (293–4).

43. The Board should be equipped to buy and re-sell land to the value of £1,000,000 each year, and it is contemplated that on the average it would be necessary for the Board to hold an estate for two years before re-selling (295).

44. The Board should be empowered to obtain advances under the Land Purchase Acts for buying tenancy interests; and of the total amount of advances made each year, under the Land Purchase Acts, £1,500,000 should be available for the Board's area, of which £1,000,000 would be for the purchase of land that required treatment by the Board (199, 223, 227).

45. The income required by the Board for carrying out its work, including £23,000 for agricultural development and £130,000 for loss on the re-settlement of estates, and all administrative expenses, is estimated to amount to less than £300,000 (295–310).

46. If the cost of agricultural development were placed on the vote for the Department, and if the loss incurred in the re-settlement of estates were defrayed in the same way as the bonus and the loss incurred by the Estates Commissioners on "congested estates" (*i.e.*, by the addition to the Parliamentary votes of an annuity sufficient to amortise in about sixty-eight and a half years the capital sums provided), the necessary addition to the Board's present income would amount to less than £60,000 (295, 299 and 309).

47. For the relief of congestion outside the Board's area, which should be entrusted to the Land Commission and to the Department of Agriculture and Technical Instruction, it does not seem feasible to define or even indicate the places that require treatment. The selection of such places must be left to the discretion of the bodies concerned, acting on the information supplied by their inspectors and the local authorities (311-3).

48. A substantial addition to the Department's funds will be required, the amount of which we are unable to estimate (314).

49. The Estate Commissioners should be given power to exempt from the operation of the zones any holdings in rundale or intermixed plots, or under £10 valuation, if they consider it necessary to enlarge or otherwise improve these holdings before vesting (319).

50. The Commissioners should be empowered to incur a loss on the re-settlement of such holdings and of any untenanted land bought for their enlargement, and this loss up to a limit of 13 per cent. on the purchase money should be defrayed out of the Parliamentary Votes in the same way as loss incurred on the re-settlement of a congested estate (319).

51. We are not in a position to recommend any change in the definition of a "congested estate"; but it should be made quite clear that any loss sustained on the re-sale of such estates should be incurred on their improvement, and not by selling them in their unimproved condition at a smaller price than that paid to the vendor (315-8).

52. The present powers of the Board are contained in ten Acts of Parliament. As each of these Acts are affected by our recommendations, we have thought it useful to reprint the sections that refer to the Board with notes, showing the amendments already made and some of the modifications required by our recommendations (see pp. 127-50). It would be convenient for purposes of codification if these sections were repealed by the Act creating the new Board, and such of them as will be required in future re-enacted, with the amendments necessary.

XLVII.—Concluding Remarks.

323. The Secretary has drawn the attention of the Commission to the great help he has received during the inquiry, not only from the Board, the Land Commission, and the Department of Agriculture and Technical Instruction—the three bodies mentioned in the terms of reference—but also from other Departments of Government, and from numerous officials; he has also greatly profited by the assistance rendered to him by those, who, for

XLVII.—*Continued.* Concluding Remarks.

varying periods, were employed in the Office of the Commission, and who have shown great ability and zeal in the discharge of their duties, especially Messrs. A. Waters, E. B. D'Alton and G. W. Narramore.

324. In concluding our Report, we wish to place on record our high sense of the services of our Secretary, Mr. Walter Callan. From the outset Mr. Callan displayed a perception of the nature of our task, a quickness in apprehending our intentions, a foresight in anticipating our calls for information, and an ability in embodying the results of evidence and discussion in well considered memoranda, which have frequently won our admiration. His devotion to his duties has been unfailing, and his tact and judgment in dealing with numerous witnesses and correspondents have materially smoothed the course of our proceedings. We feel deeply indebted to Mr. Callan.

All of which we humbly submit for Your Majesty's gracious consideration.

Resolution for compulsory acquisition.

See paragraph 157.

It has been already recommended that where the Board, having failed to secure certain lands by voluntary negotiation, deem it necessary to acquire this land compulsorily, they should pass a formal resolution describing the land, and that the resolution should be published in the *Dublin Gazette* and in one or more newspapers circulating in the county in which the lands are situate. This notice will be repeated when the Board's surveyors are in a position definitely to specify the lands. A copy of the notice should be served by the Board's solicitor upon the person who appears to be the owner of the land, and upon all persons known or believed to be interested therein. The notice should state that any person interested in the lands who objects to the acquisition thereof, should lodge in the office of the Land Commission, within a prescribed period—say one or two months—a statement of the grounds of their objection, of which the Board should be at once supplied with a copy. Any objection lodged should, after the expiration of the period limited in the notice, be heard by the Court of First Instance. Both the Board and the objectors should have the right of appealing to the Judicial Commissioner or such other Court of Appeal as may be appointed by Parliament.

Objections to be considered by Court against compulsory acquisition.

See paragraph 117.

The only objections to the acquisition of the land which would be considered by the Court would be :—

(1.) That part of the land specified in the notice was a demesne or home farm, or other land exempt from compulsory acquisition or that it materially interfered with the amenity of residence. If the Court should find in favour of the objector, such land would be excepted from the operations of compulsory acquisition, but the notice would hold good as regards the remainder of the land.

(2.) That part of the land is held by an exempted tenant purchaser, *i.e.* one whose holding or holdings do not exceed £100 valuation, and are residential, or worked *bona fide* in conjunction with a residential holding by a man whose chief occupation is farming. This objection would hardly ever occur in practice, as the Board's officers could ascertain from the Local Registration of Title Office, as regards the great majority of cases,* and elsewhere, if any of the land they believed to be part of the estate, had in fact been purchased by the former tenant.

See paragraphs 101, 152 and 219–23.

(3.) That the owner of the land had already entered into negotiations to sell either to the Estates Commissioners or to the tenants. Again, this objection could hardly occur in practice, if the recommendations already made are carried out, since they involve the exclusion, as from the passing of the new Act, of the Estates Commissioners from the Board's territory, and the prohibition of direct sale except on the certificate of the Board. Therefore there would remain only the case of land affected by negotiations prior to the passing of the Act, and the new Board could, as soon as it came into existence, obtain from the Estates Commissioners a list of all lands within their area so affected.

It might happen that the person from whom the Board had attempted to obtain the land voluntarily was not entitled to sell under the Land Purchase Acts. This, however, need not affect the vesting of the estate in the Board, since in virtue of the powers given them, and of their

* All holdings vested since 1st January, 1892, are registered in the Local Registration of Title Office, as also are about half of those vested previously.

formal resolution to acquire the land, it must be vested in them no matter who may be the owner, unless it falls within one of the three foregoing classes. If such a case as that just mentioned did arise, *i.e.* if the Board had unsuccessfully negotiated with a person not entitled to sell, the person entitled should be given the option of accepting the price offered under the voluntary negotiations to and refused by the reputed owner, instead of having the price compulsorily fixed by the Court in accordance with the scheme already recommended. At the expiration of the period mentioned in the notice the Court would examine all objections lodged. Cases (2) and (3), if they occurred, would present only simple questions of fact, and the notice of compulsory acquisition could be amended by excluding any land so affected. Case (1) would present mixed questions of law and fact, which in general would not be troublesome. The Court should be empowered to vest in the Board, if thought desirable, all the lands specified in the notice, except the alleged home farm or other land in dispute. If this question was afterwards decided in favour of the Board, the land in question could subsequently be vested; if decided against them, the notice would be cancelled as regards such land.

As the land is to be vested compulsorily in the Board, no matter who is the owner, it will be possible to have it vested as soon as the Court has declared that the land is not exempt from compulsion without waiting to examine into the title, as is, to a considerable extent, still necessary under voluntary sale, despite the provisions of section 17 of the Act of 1903. The result of this procedure, unobjectionable under compulsory powers, but impossible under the voluntary system (where the root of the Board's title is not its compulsory powers but the title derived from the vendor) would be that any land the Board proposed to acquire could be vested in them within a reasonable period—say, three months from the date of their decision to apply compulsion. On the decision of the Court that the lands were not exempt from the application of compulsory powers they would be vested in the Board, with all arrears of rent, and the Court would proceed to fix the price.

Payments by Board between date of vesting and date of fixation of price.

The Board being in possession of the lands and entitled to the rents and profits arising therefrom would, when they collected their rents on the next gale day, have to pay to the person entitled that part of the rent which had accrued from the last gale day up to the date of vesting. On the other hand if the untenanted land was let temporarily and paid for in advance, the Board would be entitled to receive, or set off against the price, the apportioned part of the grazing or conacre rent paid or payable in respect of the period between the date of vesting and the determination of such temporary letting. If one or more gale days occur between the vesting of the land in the Board and the fixation of a price a difficulty would arise as to the amount payable to the landlord in respect of such period. If the latter produces his estate books and other accounts promptly, it will soon be apparent to the Court whether the necessary materials for fixing the price on the basis of net profit income are available. If the price could be fixed upon the basis of net profit income, the amount payable would be the proportion of the charges and of the net profit income that accrued between the date of vesting and the gale day. If net income returns were not available and the price had therefore to be fixed by valuation, the amount payable would be, according to the present arrangement, $3\frac{1}{2}$ per cent. on the purchase money for the period between the date of vesting and the gale day. Out of that amount the landlord would, as under the present system, have to meet charges. If the gale day occurred soon after the vesting, there would be a difficulty in determining the amount in either case, as the Court would not have definitely settled the price by either method. The Court could, however, estimate the amount that they thought would be payable and order the lodgment of that amount by the Board, for distribution amongst the landlord and the chargeants. The objection to this course is that if more were paid than the landlord would be entitled to, it might be putting a premium on delay: if less was paid than he would be entitled to, then it would be a hardship for him. In practice, however, there would probably not be much difficulty if the Board were required to pay into Court the full

proportionate amount of the rental. If the gale day occurred so soon after the vesting that the Court had not been able to get any information as to net income, the full amount might be paid over to the landlord. Any premium thus put upon delay could not be great. If a sufficient interval occurred to enable the Court to get some indication of the probable net income, an amount approximate to this might be paid over. If the interval had been sufficient to show the Court that there was not enough evidence of net profit income available the price would have to be fixed by valuation, and the full amount of interest thereon might be paid over. In any case an account would subsequently be taken for re-adjustment, and the amount, if any, overpaid would be deducted either from the price, if the landlord was an absolute owner, or from the next half-yearly payment of interest if the landlord was only tenant for life. The price would most probably be ascertained before a second gale day occurred, but if not, the Court should have power to order a reduction in the amount to be paid over, if they thought there was an unreasonable delay on the landlord's part in producing his accounts, just as, under the 25th section of the 1903 Act, the rate of interest may be reduced below $3\frac{1}{2}$ per cent. after the "Closing Day," if the Land Commission are not satisfied that the delay is not caused by any default of the landlord.

Examination of title to take place concurrently with proceedings for fixation of price

Once the lands are vested in the Board, all claims upon them will be transferred to the purchase-money, as at present happens when a vesting order is made under section 14, sub-section 1 of the Act of 1887, and section 16 of the Act of 1903. Concurrently with the examination by the Court of the proofs of net income adduced by the landlord (or with the fixation of price by valuation where net income returns are not available), Examiners of Title, specially assigned from the Land Commission staff for this work, should investigate the title of the landlord and the claims of all chargeants, and other persons having an interest in the land, to be paid out of the purchase-money. As each charge was established it should be paid off without waiting until the landlord had proved his title to sell, though this is necessary under the present system. Thus if a quit rent of £10 a year were payable out of the land it should be at once redeemed by payment of £250, and the Board would then be liable, pending re-sale, not for £10 a year but only for $2\frac{3}{4}$ per cent. upon £250. If the price the landlord is to receive is subsequently fixed upon net profit income the £10 would be of course deducted from his gross income. If on the other hand the price to be paid him was a capital sum fixed by valuation that sum would be reduced by £250, since the charge which he would otherwise have had to redeem would have been paid off. When all the charges have been paid off the Board would be liable, pending re-sale, for $2\frac{3}{4}$ per cent. upon the money required to pay them off and upon the price of the securities or cash that have to be transferred to the landlord to produce his net income. These two sums would represent the total price of the estate if it had been fixed on the basis of net income.

Dealings with tenant-purchasers and tenants.

We do not think that much difficulty can arise in connection with dealings with land acquired by the Board from tenant purchasers. Most of these purchasers are registered owners, and a land certificate, which is their evidence of title, shows most of the charges affecting the land. Evidence was, however, given as to the difficulties experienced by the Board in dealing with the transfer of tenants' interests. Where the Board acquires the tenant's interest in the whole or part of a farm for re-division amongst small holders, it is at present necessary, in order that the Board may give good title to those amongst whom the farm is to be divided, that the tenant should be able to show a title to the holding, just as it is necessary for the landlord to show a title to an estate, and all charges, equities, and liabilities affecting the tenant's interest must be removed before the holding can be vested. Otherwise these charges and equities follow the holding, and can be enforced by sale against the Board and against the new tenants, even though they have paid the full value of the holding. If the original tenant was not possessed of the legal estate, the risk is greater. Dealing with equities and incumbrances on holdings is more difficult than dealing with equities and incumbrances on estates, since holdings are seldom charged by deed, or indeed by any written instrument, a fact which increases the difficulty of tracing the devolution of title to

the legal estate and to the charges, equities and liabilities. The Board, like other people acquiring a tenant's interest, have been hampered by these difficulties, and so far have been obliged to take a good deal on chance.

Case (1). Where an alternative holding is given.

All cases where the Board will in future acquire a tenant's interest in a holding may be divided into two classes, (1) where the Board will give in exchange another holding of equal or greater value, and (2) where the consideration is cash. Under compulsion, dealing with tenancy interests in the former case becomes comparatively simple. It is not necessary to inquire whether the tenant is the person in whom the tenancy is legally vested, since under the suggested powers of their Act the Board will be able to declare that the holding must be acquired by them, no matter who is the owner, and all claims on the old holding will be transferred to the new. Even where they obtain a tenancy interest by voluntary negotiations, this latent compulsory power of the Board might be held to obviate the necessity for enquiring into the title of the tenant, provided :—(1.) That the holding given in exchange is not of less value than the original holding; (2.) That the Act declares that, in all such cases, all claims to the legal estate in the old holding, and all charges, liabilities, and equities affecting that legal estate, should be transferred from the old holding to the new, the vesting being subject, as at present, to any public right affecting it, any sporting rights over it, any maintenance charge under the Public Works Act, and any easements, rights, or appurtenances mentioned in section 34 of the Land Law (Ireland) Act, 1896.

The only additional points that have to be met are, first, that some public notice should be given by which claimants to the tenancy and holders of equities would have an opportunity of knowing that their rights were transferred away from the original holding, and, secondly, that there should be a public permanent record of the holding to which the rights were transferred. The first point could be met by publication of a notice in the *Gazette* and in one or more newspapers circulating in the neighbourhood of the holding. The second point could be met by a note being entered in the Registration of Title Office on the record of both the original holding and the new holding. This system of transferring claims on the land is simply an extension of a principle of general application as regards estates (see section 14, subsection (1) of the Act of 1887 and section 16 (*g*) of the Act of 1903), and is already the law as regards holdings in certain cases. Under the Act of 1901, empowering the Board to determine any tenancy in an estate purchased by the Board, on a request from three-fourths of the tenants, it is provided that where a new holding is given, and not cash, the County Court Judge may order that such charges, liabilities, and equities as affect a tenant's interest in his former holding shall either continue to affect that holding or be transferred to his new holding. Under section 12 of the Act of 1903, the Estates Commissioners have power to make similar orders as to the transfer of charges, liabilities, and equities. The Court of First Instance already suggested for the settlement of questions of price would seem to be the most suitable Court to decide all questions arising out of this power of transfer, which it is suggested should be given to the Board.

Case (2). Where cash is paid

The Board's Solicitor, Mr. O'Connor, suggested that, where the consideration was cash, all claims to the legal ownership of the tenancy and all charges, liabilities and equities affecting the legal estate should, by declaration be transferred from the holding to the purchase money, just as after a landlord has shown a *prima facie* title and the vesting order is executed, all claims upon an estate are similarly transferred. This involves a subsequent investigation of the claims before the final allocation of the purchase money. It seems impossible in practice to carry out these investigations as regards the purchase money of a holding in the same way as in the case of the purchase money of an estate, mainly owing to the difficulty of investigating claims which arise otherwise than by deed and to the inconvenience of putting small sums of money in settlement. The only remedy that can be suggested is that if the person in possession of the holding, or his predecessor in the legal estate has been paying rent for, say, six years, he should be deemed the owner for the purpose of sale, unless the contrary is shown within a period limited by a notice published in the *Gazette* and in one or more of the local papers of the

county in which the holding is situate. After discharging any charges which may have been found to exist, the balance of the purchase money should be paid over to the assumed owner, impressing the purchase money in his hands with a trust, for what it is worth, in favour of any owners of charges or equities not proved. It is difficult to make any more definite recommendation for the treatment of these cases, where the consideration for the transfer is cash. As the whole matter is complicated it is suggested that it should be considered by the Law Officers of the Crown, in consultation with, the Land Commission and the officials of the Board.

Points connected with present procedure before vesting.

Before dealing with any changes in the procedure for resale by the Board to tenants it may be well to consider two points regarding the present procedure for voluntary purchase up to the date of vesting.

1. Some statements were made of delay on the part of the Estates Commissioners in vesting estates which the Board had agreed to buy. It is quite obvious from the evidence of Mr. Crookshank, the Chief Examiner of Titles to the Estates Commissioners, that they can not be held responsible for this delay, and that it was entirely due to the regulations of the 4th July, 1905, made under section 23 (8). After the passing of the Act of 1903, the steps necessary for the completion of sales of estates to the Congested Districts Board seem to have been proceeded with as speedily as possible, and at the date of the regulations mentioned, *i.e.*, 4th July, 1905, the necessary preliminary steps had been taken in the office of the Estates Commissioners in all cases of sales to the Board then pending, though at the same date the Estates Commissioners were only dealing with direct sales begun a year earlier (June, 1904). These regulations, however, ordered that no vendor or class of vendors should be given undue preference over any other vendor or class of vendors, and every case had to be given a priority date, which in the case of sales to the Congested Districts Board was the date of the lodgment of the originating request. Consequently no Congested Districts Board case which bore a priority date later than June, 1904, could, after 4th July, 1905, be dealt with until all the other cases of earlier date had been carried through. The consequence was that as long as the regulations referred to remained in force, *i.e.*, from July, 1905, to February, 1906, no new Congested Districts Board case could be taken up, and there was a difficulty in dealing even with the cases partly opened in July, 1905. These regulations were superseded on the 13th February, 1906, by others which enabled the Estates Commissioners to deal at their discretion with the several classes of sales. When the earlier regulations were withdrawn the time of the Commissioners was so hypothecated that it was several months before they could give the Board the full advantage of the change in the regulations. The arrears were, however, overtaken as speedily as possible, and the Estates Commissioners seem to have made every effort to facilitate the vesting of estates bought by the Board. It might be desirable to give the Board a permanent right of priority for voluntary sales, within the financial limits suggested for the Board's operations.

2. The Solicitor to the Board stated that in order to facilitate matters it was the practice of the Board to have a preliminary agreement with the vendor prepared, after the signing of which the Board went into possession of the lands. When the title to the estate had subsequently been proved to the satisfaction of the Land Commission, a second agreement between the vendor and the Board had to be entered into under section 79. Having regard to the similarity between these agreements, Mr. O'Connor recommended that the preliminary agreement should be substituted for the statutory agreement, but he admitted that the action of the Board in going into possession of an estate on a preliminary agreement was not without risk. The Chief Examiner of Titles to the Estates Commissioners emphasised this point. As the matter is somewhat technical, perhaps the best course would be for the matter to be considered by the Law Officers of the Crown in consultation with both Mr. O'Connor and Mr. Crookshank.

Procedure for re-sales.

The question of procedure for re-sales must now be considered. At present after an estate has been vested in the Board's Trustees, they have to be registered as owners in the Registration of Title Office, and a land certificate issued, without which re-sale proceedings through the Land Commission cannot begin. This procedure has undoubtedly led to some delay in the past. What has to be done in the Registration of Title Office is, apparently, to enter up the particulars of the vesting order, assign a folio number, have the maps copied and engross the certificate. These operations should take only a couple of weeks, but it has generally been several months, in fact sometimes twelve months, before the certificate has been issued, even though registration might have been completed in a comparatively short time. The delay seems to be due partly to insufficient staff and partly to matters of office practice. In the first place, the Board's cases had not sufficient priority until the beginning of the present year. Land which is registered under the Registration of Title Act may be divided into two classes :—

(1.) Land vested by the Land Commission in themselves or by them or the Land Judge in a purchaser, whether the Board or an ordinary tenant, under the Land Purchase Acts. Registration in this case is compulsory. The vesting order made by the Land Commission is sent to the registering authority who has not to inquire into the validity of the title thereby transferred; consequently the time required for registration should be a matter of only a week or two.

(2.) Land voluntarily registered by the owner, or land sold under the Land Purchase Acts prior to 1892. As the title in this case has to be carefully examined, more time is necessary.

Delays in issuing land certificates.

These two classes of registration have always been dealt with separately, but until recently the Board's cases which now almost invariably fall under the first category, had no priority over other cases in the same class. The Registration of Title Office, however, recognising the undesirability of any delay in registering the Board as owners, in view of the fact that such delay would retard re-sales to a large number of tenants, arranged early in the present year to give the Board's cases priority, and to take them up on receipt of the vesting order. Consequently each case ought now to be registered in a fortnight. A further source of delay arose from the fact that where land is registered the certificate is not usually issued until it is bespoken, when in ordinary cases a fee has to be paid. No fee is however paid by the Board, and there seems to have been no reason why bespeaking should have been required in their case, beyond the fact that it was the usual office custom. It has been ascertained that land certificates were issued in a great number of cases without being bespoken, on a mere verbal request of the Board's officers. The extent of this practice is in dispute between the Board and the Registration of Title Office. Undoubtedly delays have occurred which were avoidable, but it is hardly worth while now going into the matter in detail, as the Title Office have on their own initiative for the last six months definitely dispensed with the lodgment of formal requests by the Board for issue of land certificates, and have arranged in future to issue them as soon as registration is completed. This amendment in the procedure, together with the priority given to the Board's cases, should remove delay and ensure the receipt by the Board of a land certificate within a couple of weeks of the date on which the estate is vested in them. Any further cause of delay that may arise we think that it ought to be brought to the notice of the Registrar of Titles. A suggestion was made that the Board should be allowed to dispense with the land certificate and re-sell to the tenants through the Land Commission on producing the vesting order previously made by that body, As waiting for a land certificate should not in future cause delay for more than a couple of weeks there would be no particular object in making this change, and there seem to be reasons against doing so, notably the fact that the lands affected (unlike other lands bought since 1891 under the Land Purchase Acts) would not be registered during the year or two that might elapse before the estate was re-sold to the tenants.

When the land certificate had been lodged the Board was, until last February, obliged to lodge with it at the Land Commission a document called an originating statement and a certificate for the registration of the matter as a *lis pendens*. There seems no reason why the lodgment of the latter document should cause any delay or trouble, but there does not seem to have been sufficient reason for requiring the lodgment of an originating statement since practically all the information it contained was included in the originating request which had been previously lodged before the sale of the land to the Board. It is, however, unnecessary to discuss this, as by rules dated 31st January last, the Land Commission have themselves dispensed with the originating statement. The Board's solicitor in his evidence stated that, though the land certificate is conclusive of everything therein stated to affect the title, the Board were obliged by the Land Commission to go behind the land certificate and show that all death duties payable by the recent owner had been duly discharged, and that all quit and crown rents, tithe-rentcharges and Board of Works' charges had been redeemed. When an estate is registered voluntarily it may be still subject to these charges, and consequently when an owner of land, proposing to sell to or through the Land Commission, lodges a land certificate as evidence of his title, it is necessary for the Commission to make sure that these charges are redeemed. Where, however, that owner has had the land vested in him by the Land Commission as the result of a sale under the Land Purchase Acts, the Land Commission themselves have seen that these charges are redeemed. There is a provision in section 47 of the Local Registration of Title Act which enables the registering authority to enter upon the land certificate a note of the fact that these charges have, in point of fact, been redeemed. The Land Commission seem to have held that the Board's officers ought to have seen that this note was entered upon their certificates, which would have made the issue of requisitions as to these charges unnecessary. The Board's solicitor, however, seems to have experienced, in at least one case, some difficulty in getting this note entered, and to have held that, in any case, it was not necessary as the Land Commission should know that they themselves had previously vested the land in the Board and had seen to the redemption of the charges. He stated, moreover, that the originating statement which the Board were obliged to lodge with the land certificate, contains a paragraph stating that the Board had obtained possession of the estate through the Land Commission.

Requisitions on land certificates.

We do not think, however, that any serious delay has been caused by the action of the Land Commission in this matter. Rulings on title were issued by the Land Commission since 1903 as regards thirty-three estates, purchased under the Act of 1903 through the Land Commission. In twenty-eight cases no requisition was made as to the quit or crown rents, tithe-rentcharges, or succession and estate duty. In the five other cases where such requisitions were issued it was done through an oversight, and they were dispensed with as soon as attention was called to the matter. It is not quite clear whether lands vested in the Board by the Land Judge do not remain liable to these charges, and whether it is not, therefore, the duty of the Examiners of the Land Commission to issue queries in these cases. In any case where the Board are owners of an estate which has been registered voluntarily, it would certainly be their duty to issue the queries in question. Probably no future difficulty will arise in connection with them, but it might be well for the Board's Solicitor to arrange with the registering authority to have the note, under section 47, already referred to, inserted, in every case, which would render it practically impossible for such queries to be issued in the future. In some cases under the present practice it seems impossible to avoid issuing the queries as the estate may be subject to leasehold interests, and the Board often, for the purpose of enlarging or re-arranging holdings, take a conveyance or surrender of such land from the tenant. The tenant may, from the nature of his interest, be liable to tithe-rentcharges, payable either to the Land Commission or to a lay impropriator, and the land may be subject to a Board of Works charge on the tenants' interest. The effect of the conveyance or surrender by the tenant to the Board would be to transfer such charges to the fee. The Land Commission must, therefore, look into

the matter of tithe rent-charges and the Board of Works charges in connection with tenants' interests. It has been suggested to us that these difficulties can be obviated to a large extent by the Congested Districts Board supplying the registering authority, as we understand they have arranged to do, with particulars of all leasehold interests on estates bought by the Board, where the lease was for at least thirty-one years, in order that these interests may be noted on the land certificate.

Priority for Board's work.

We may say, in concluding the question of procedure, that we have had no hesitation in recommending that the Board's cases should have, where necessary, special priority in the various Government offices connected with the work. No matter how the sale of land in the Board's area may be effected, the work will have to be done sooner or later, and consequently no extra expenditure is involved in expediting the process, and the work of resettlement in that area is more urgent than elsewhere. As regards the matter of expediting the work, it may be pointed out that sales must be less rapid within the Board's area than outside it, owing to the time taken resettling estates, and that these unavoidable delays should be counterbalanced so far as may be possible by special expedition in dealing with the Board's cases.

B.—MEMORANDUM ON SPORTING RIGHTS.

(*See paragraph* 249.)

We have declared that compensation for sporting rights must, if acquired, be paid for (paragraphs 160, 191, and 196); against interference with the amenities of residences of owners (paragraph 117); and pointed to mountain land as not being suitable for breaking up (paragraph 120). Amenities include sporting rights, while mountain land, unsuitable for breaking up, may, and generally does, possess a sporting value. It therefore becomes necessary to devote special consideration to these questions as a whole.

The laws of this and other countries to secure the preservation of game and fish testify to an almost universal recognition of their national importance. The Act of 1881 provided for the retention by the owners of the exclusive right of taking game and fish, and exercising general control for their preservation over the whole area of their property, although it deprived them of almost every other power incidental to the relations between landlord and tenant. Interference by tenants with the exercise of these rights and powers rendered them liable to penalties similar to those for non-payment of judicial rent. 44 Vic., s. 5.

The Act of 1903 provided that where a landlord had "sporting rights exclusive of the tenant" (as provided for under the Act of 1881) he can at the time of sale either reserve them, or convey them to the tenants by agreement, but "in the absence of such agreement these rights shall be vested in the Land Commission." This Act attached to this reservation the right to enter upon the land, after it had been vested in the tenant purchasers, provided that any person so entering land "shall be liable to make reasonable amends and satisfaction for any damage done or occasioned thereby." It was further provided that the possessor of such rights reserved "shall have the same authority to prosecute for trespass in pursuit of game as if he were the occupier of that land." In contemplating, therefore, the breaking up of estates into small holdings by the use of public money, Parliament has recognised the expediency of providing for the preservation of game and fish, and as the law stands it is only through the voluntary action of landowners, when selling to tenants, that power necessary for general supervision, and control for purpose of preservation, ceases to operate. 3 Edward VII., c. 37, s. 13.

Having regard to such consideration, it is open to question whether this dissipation of power of general control by the act of a landlord, should be allowed to continue; this will be made more clear later on. Though the Act of 1903 and other Purchase Acts recognise the importance to the State of the preservation of game and fish and the value of these incorporeal hereditaments attaching to estate ownership, none authorise advances from the Exchequer, to enable the tenants to acquire or secure control over such rights, however substantial and remunerative. Public money is freely spent to augment the production of salmon and trout. Without the strict preservation of rivers and streams such expenditure would be waste. Riparian owners are now by law and custom, the guardian of these inland waters. From motives of self-interest they are prompted to preserve. The extent of their efforts and expenditure is in relation to the prospects of individual gain. Power over the whole extent of the waters they own centralises in them, and is exercised by them under Statute.

When by sale of estates their owners disappear, and a multitude of riparian peasant occupiers take their place, unless some authority assumes general and effective control over the waters, it cannot be expected that preservation will be efficient, and if it be not, then injury, if not destruction, of fish will result.

For example, in any salmon river, however long, taking fish by legal methods is only possible at a limited number of places, while netting and illegal captures of fish can be made anywhere. It is too much to expect that the temptations to the purchasing tenant to secure food or profit by fish from his bit of river can be resisted, unless restrained by effective measures. If there be not established co-incident with the sale a substantial interest common to all—and a power of general control to safeguard that common interest—the danger to the fisheries is obvious. Similar considerations apply to safeguarding the national interest in preservation of game, but to a lesser degree.

It is also to be remarked that licences for rods to kill salmon and licences to kill game exist and are enforced in the interest of preservation of both. It is not to be anticipated that an occupier with a holding of £10 valuation is likely to pay either £1 for a rod licence to fish his few yards of water, or £3 for a game licence to kill game on his few acres of land. If authority and control over large areas necessary for preservation of game and fish be allowed to disappear, with the extinction of estate ownerships, the restraints imposed by licences will, in effect, disappear also. Salmon licences are the only source of income at the disposal of the boards of conservators for the purpose of the preservation of the fish in their several districts, and without money, preservation must cease.

It has already been stated that no public money is advanced to tenants for the purchase of, or for dealing with, sporting rights, but it may be useful here to state the circumstances under which they are transferred.

Except in an unknown minority of cases, up to the time of the agreement for sale to the tenants the sporting rights belong exclusively to the owner of the estate. As the tenant cannot get an advance for the purchase of these rights he can only obtain them :—

1. By paying for them out of his own pocket ; or
2. By paying the owner, as consideration for acquiring them, an enhanced price for the land ; or
3. By receiving them as a present, through the generosity of the owner.

By whichever of these processes the dissipation of control over a considerable area into fragments among a host of small occupiers, independent of each other, is reached, the injurious effect upon preservation of game and fish is the same.

This bad effect upon the prospects of survival of game and fish is not confined to the area of the particular estate concerned. It may border an important salmon river where preservation is specially important to all the rest of it, above and below, or it may lie on the middle of a tract specially valuable for moorland game. In any case, it is fatal to effective preservation of fish in rivers or tributaries and game in immediately adjoining areas. Whether this process is to be allowed to continue by direct sales within the area of the Congested Districts Board, is a matter demanding special attention in formulating the functions and duties of that body, having regard to the fact that except in respect of direct sales all estates must pass through their hands, and they, in each case, will temporarily be owners, with sporting rights vested in them, and controlling future arrangement as to their ultimate disposal.

Vast tracts within the Congested Districts Board's area are of such a character as to suggest great potential value for sporting purchasers (or purposes), while in the most poverty-stricken districts the rivers and lakes are, in an economic sense, of the highest value, though the land may be described in the same sense as almost, if not wholly, worthless.

In these areas are situate many properties great in territorial extent, perhaps intersected by rivers, lakes, and streams, and large extent of mountains and moors yielding profit to the owners from their sporting value far above the rents from land. On these properties are population, small in relation to the area of the estates, but in such circumstances owing to the poor quality of the land, as to compel the Congested Districts Board to take action for providing permanent amelioration of their condition. Effective measures to secure that object necessitate the Board becoming the owner, so as to exercise the powers conferred by statute upon them and necessary to discharge their duty. Now a purchase of the sort of property described above presents the following problem.

Under the existing state of things, a sale of the land only would, in effect, deprive the proprietor of his powers effectually to preserve fish and game. It cannot be expected he would voluntarily agree to sell the land separately. For the Board compulsorily to take the land alone might be out of the question, for it would destroy the exercise of power necessary for preservation. On the other hand, if the fisheries and game rights be included in the purchase, the owner is entitled to be paid by the Board their full value. It may be

remarked in passing that for fishings and shootings there is a free market. Now the real value of these rights and amenities attaching to estate ownership are subject to and dependent upon the powers for preservation vested in the owner by Statute. These he is in possession of at the time of the proposed purchase by the Board, the completion of which transfers to them these powers. So long as they retain them in their full effect, the transaction is a sound business one, and so long as they retain and exercise these powers the income from these sporting rights may be regarded as secure. If, however, the Board, when selling the estate and vesting the land in the tenant purchasers, do not reserve all the exclusive sporting rights they bought—or in any way diminish the power of central control essential to preservation—they will destroy the value of the incorporeal hereditament for which they necessarily paid market price, and not only inflict loss upon their own funds and the Imperial Exchequer, but gravely imperil these forms of national assets, sources of their own profit and contributory to the welfare and prosperity of their country.

Again, where the Board have acquired a property on which the sporting rights are a valuable asset and have been paid for accordingly, control over contiguous areas of less sporting value is a matter of importance. If these rights later become vested in the tenants on the contiguous areas the value of the original purchase by the Board will be depreciated accordingly. For this reason it is desirable to provide that the owners within the Board's area should not be allowed to transfer sporting rights to the tenant in direct sales to the injury of that power of control necessary to general preservation, but should vest them in the Board. It is a question whether the Board should retain these necessary powers in their own hands indefinitely, remembering that they are a temporary body, while the interests to be conserved are permanent.

General Considerations.

To make preservation of game and fish effectual it is essential to base arrangements for securing it upon the goodwill of the community, and especially of occupiers of land, both riparian owners and others. It is essential to enlist the services of occupiers by making preservation a matter of self interest to them. This can only be done by encouraging and organising their co-operation by which to secure for them some gain.

It is suggested that while, on the one hand, the Board should retain exclusive sporting rights and exercise all the powers necessary for preservation, on the other, they should act as trustees to administer and work through local committees, these incorporeal hereditaments for the benefit of the areas placed under the Committee's supervision. The Board in constituting the committees should make rules for their guidance, &c., much on the lines of the Parish Committees, which admittedly have been successful.

The Procedure of the Congested Districts Board for Scotland.

Happily, what is above suggested is in conformity with the method pursued by the Congested Districts Board for Scotland. From their Eighth Report some general idea can be formed of that body's method of dealing with sporting rights of properties acquired and held pending purchase by the crofters. It appears in the case of the Kilmuir estate purchase, now in process of settlement, the price to be paid by the crofters for shooting rights alone is calculated at 16 years' purchase, but, as in Ireland advances are not obtainable for such a purpose, this method does not apply.

Eighth Report of the Congested Districts Board of Scotland, Appendix IV., par. iv.

In response to inquiries made by our Secretary, the Secretary of the Board for Scotland outlined the rules and system in force guiding and regulating the sporting rights. It is suggested that these might form a valuable guide to the Irish Board. The preservation and the increase of these national assets of game and fish are as important to Ireland as to Scotland or any other country, and the natural conditions of Western Ireland present in a marked degree many advantages for their development. The Board now, and so long as it continues, is an effective instrument for gradually improving what is contributory to the benefit of the general community, and with advantages to its own resources.

Letter from Secretary to Congested Districts Board for Scotland to Secretary of Royal Commission 27 : 3 : 08. XI., p. 108.

It is suggested that the Board should organise and administer arrangements for accomplishing such a result, so that in due course the work can be taken over and carried on as a going concern by local and possibly representative bodies now existing. From the point of view of enlisting popular sympathy there is some force in the desire expressed by the witness who appeared before us on behalf of the Irish Game Protection Society. In order to "encourage a general conception of the advantage to the nation of game and fish," he suggested that the amount received by the British Exchequer (£23,000 a year) for game licences issued in Ireland should be received back by Ireland. The purpose in view was that localities should receive benefit from that source in proportion to the licences issued, the number of which is likely to vary in ratio to the amount of game in the district. It may be mentioned that the sum annually collected for dog licences in Ireland is about £47,000, and after deducting £27,000 for the Petty Sessions Department, the balance, £20,000 per annum, goes to counties and boroughs for the relief of rates, &c.* In effect, therefore, the proposal as to the ultimate destination of the money collected for Game Licences is in harmony with the system already adopted in respect of dog licences. The number of dogs in Ireland of all sorts is proverbially great. As a rule, they are not under control, and are left at large night and day. To this cause may be attributed the paucity of game in Ireland—despite its natural advantages—as compared with Great Britain. It may be noted here that the dog tax in Ireland is 2*s*., while in Great Britain it is 7*s*. From the point of view of preservation it is important this tax should be enforced, with the support of popular opinion prompted by self-interest.

Q. 59275.

Were the proposal made to us as regards revenue derived from Game Licences carried out, and the money merged with that payable on account of Dog Licences and paid to County Councils in one sum annually, a popular conception of the value of game to the community generally might develop, and as a source of public profit be better understood. Meantime, if on estates purchased and settled by the Board the policy and practice are such as to benefit the occupiers out of profits derived from wise conservation and management of the Board's sporting rights, popular favour in support of general preservation will be at all events developed. In order to carry out any such policy, the Board must be given more freedom. It will be remembered that when the Board had arranged, with the consent of the tenants on the Dillon Estate, to carry out a policy on the lines indicated above, the views of the Land Commission affected the Board's action. Reference to the letter of Mr. Commissioner O'Brien to the Board, 16th December, 1900, suggests the necessity of freeing the Board from such interference in dealing with sporting rights. If the views expressed in that letter are to prevail, the Board will be hampered in efforts to reap advantages to their income, or to confer them on the tenants they settle on the lands, by a wise administration of the sporting rights they buy. In conclusion, attention is specially directed to the evidence of the Rev. James Kelly, P.P., who went fully into the question of Sporting Rights. His statement, Q. 52614, puts clearly his whole contention, "*On sale, either the sporting rights are in the hands of the landlord or judicially passing into the tenant's hands. Well, in either case, I should say that in the act of transfer or sale to a public body the sporting rights should go there and then 'in globo' to the tenants, and not be individually vested in them.*"

XI., p. 106.

X. Q. 52606–25

This proposal, if carried out, would, in effect, enable the Board to deal with shootings and fishings on the lines of the system pursued by the Board for Scotland.

Sec. 4 of the Act of 1903 provides facilities for its adoption in Ireland. It provides for advances to Trustees (as distinct from tenants) for purposes of preservation of game and fish.

3 Edward VII., c. 37, sec. 4.

* In the proposed area of the Board—excluding the four Unions in Co. Cork, for which returns are not available—the figures for the year 1906 are as follows:—130,220 dogs licensed, the total amount of the dog tax paid being £13,022. This represents one dog licensed for every eight persons and the equivalent of 1·3*d*. in the £ (on total valuation) paid for dog tax.

C.—STATEMENT AS TO ACTS AFFECTING THE CONGESTED DISTRICTS BOARD.

(*See Recommendation, No. 52, p. 115*).

PURCHASE OF LAND (IRELAND) ACT, 1891.—Part II. (Sections 34-41).

TEXT.

34.—(1.) For twenty years after the passing of this Act, and thereafter until Parliament shall otherwise determine, there shall be a Board called the Congested Districts Board for Ireland, consisting of the Chief Secretary and of *a member of the Land Commission whom the Lord Lieutenant may nominate to especially represent agriculture and forestry*, and who shall be ex-officio members of the board, and of five other members. *The Chief Secretary, when absent, shall be replaced by the Under Secretary to the Lord Lieutenant.*

(2.) It shall be lawful for Her Majesty, by warrant under the Royal Sign Manual, to appoint and fill up vacancies among the members, other than the ex-officio members, and also in the same manner to appoint one or more persons, not exceeding three, to be temporary members of the Board for the purpose of the business of the Board relating to fisheries, agriculture, or other special matters. A temporary member of the Board shall hold office for such period as may be mentioned in the warrant appointing such member.

NOTES.

By section (1) sub-section (4) of the Agriculture and Technical Instruction (Ireland) Act, 1899, the Vice-President of the Department was made ex-officio a member of the Congested Districts Board. For over seven years this caused no increase in the number of the Board, as the then Vice-President was an original member of the Board, but since May, 1907, this proviso has increased the Board to eleven.

By section 84 of the Land Act, 1903, the Under Secretary replaced the member of the Land Commission mentioned in this sub-section, and the words italicised were repealed by section 103 of the Irish Land Act, 1903.

It is proposed that the Board should consist of the following :—

(1) Ex-officio, four in number :—
The Chief Secretary.
The Under Secretary.
The Vice-President of the Department.
One Estates Commissioner.

(2.) Elected—nine in number :—
The County Councils of Donegal, Galway, Leitrim, Mayo, Roscommon, Sligo, Kerry and Clare, each to elect one, and one being elected by a joint committee of the four Rural District Councils of Bantry, Castletown, Skibbereen and Schull.

(3.) Nominated members, four in number.

(4.) Paid members, three in number, one having special knowledge of land re-settlement, another of fisheries, and the third of industrial development.

Vacancies caused in the new Board will be filled up by a fresh election or nomination.

The distinction between temporary and permanent members has been nominal and would be out of place in the new Board.

34.—*continued.*

(3.) Three members of the Board, not including temporary members, shall form a quorum, and any act of the Board may be signified under the hands of any three members of the Board

The quorum, presumably, should be larger in future, as the Board is being increased from eleven to twenty. Any act of the Board could, in future, be signified by their seal as a body corporate.

35.—(1.) For the purposes of this part of this Act, the sum of one million five hundred thousand pounds (in this Act referred to as the Church Surplus Grant) shall, with interest at the rate of two and three-quarters per cent. per annum, be charged on the Irish Church Temporalities Fund, and such interest shall, *so far as not required for the purposes of the Guarantee Fund as hereinafter mentioned*, be placed at the disposal of and paid or applied as may be directed by the Congested Districts Board for the purposes of this Act.

As the interest on the Church Surplus Grant was, by section 73 of the Land Act of 1903, removed from the Guarantee Fund, the words in italics, though not actually repealed, have at present no meaning. The Board received an increase of income in 1899 to the nominal extent of £25,000 under section 5 of the Congested Districts Board (Ireland) Act, 1899, and a further increase of £20,000 under section 38 of the Irish Land Act, 1903, out of the Ireland Development Grant.

(2.) The interest on the Church Surplus Grant shall be paid by the Land Commission at such times as the Treasury direct, and so far as not for the time being required, may, under the directions of the Treasury, be invested, and the principal and income of such investment shall be dealt with as if it were the said interest.

(3.) The Land Commission may, with the consent of the Treasury, place at the disposal of and pay and apply as may be directed by the Congested Districts Board for the purposes of this Act any part of the principal of the Church Surplus Grant *which may not in the opinion of the Treasury and of the Lord Lieutenant be required for the purposes of the contingent portion of the guarantee fund.*

The words in italics, though not repealed, are rendered inoperative owing to the removal of the interest of the Church Surplus Grant from the Guarantee Fund by the Act of 1903. The whole sub-section has been inoperative, as the Treasury have not consented to any payment and application by the Board of the capital sum. See also section 40 (6), *post.*

(4.) Section thirty-two of the Land Law (Ireland) Act (1881), and section twenty of the Arrears of Rent (Ireland) Act, 1882, and section twelve of the Tramways and Public Companies (Ireland) Act, 1883, shall be repealed.

These provisions facilitated emigration, and were practically dormant for some years before 1891.

(5.) The Irish Reproductive Loan Fund and the Sea and Coast Fisheries Fund, including all moneys due on foot of loans, and for interest, dividends, and other annual income payable on foot of such funds, save and except the sum of twenty thousand pounds, forming portion of the Sea and Coast Fisheries Fund, shall be placed at the disposal of the Board for the purposes of this Act, but shall be applicable only in any county in which the fund is before the passing of this Act applicable, and the said sum of twenty thousand pounds shall be retained by the Commissioners of Public Works, and expended by them elsewhere than in the congested district counties, as if this Act had not passed.

The £20,000 excepted was by section 15 (c) of the Agriculture and Technical Instruction (Ireland) Act, 1899, placed at the disposal of the Department. See also Public Works Loans Act, 1892, section 4, *post.*

36.—(1.) Where at the commencement of this Act more than twenty per cent. of the population of a county, or in the case of the county Cork of either riding thereof, live in electoral divisions of which the total rateable value, when divided by the number of the population, gives a sum of less than one pound ten shillings for each individual, those divisions shall for the purposes of this Act be separated from the county in which they are geographically situate, and form a separate county (in this Act referred to as a congested districts county), *and the provisions of this Act as to the share of a county in any portion of the Guarantee Fund shall apply to such county with the necessary modifications.*

The words in italics, though not repealed, have been rendered inoperative by section 73 of the Irish Land Act, 1903, under which a congested districts county ceases to be separated from the county in which it is geographically situate for the purpose of the Guarantee Fund.

The recommendations of the Commission involve the abolition of this test of congestion, and consequently of the existence of "congested districts counties," it being recommended that the whole of Connaught, Donegal, Clare, Kerry, and the four rural districts of Bantry, Castletown, Skibbereen, and Schull should be placed under the Board.

(2.) Provided that if within one year from the passing of this Act it appears to the Congested Districts Board that it is expedient to include under the provisions of this section any electoral division other than the divisions hereinbefore mentioned, or to exclude therefrom any electoral division, it shall be lawful for the Lord Lieutenant, on the report of the Board, to include or exclude, as the case may be, such division.

Thirty-one electoral divisions were scheduled under this provision, and none were excluded. This sub-section has been inoperative since August 6th, 1892.

(3.) *The interest on the Church Surplus Grant shall form part of the contingent portion of the Guarantee Fund, and be applicable for the purposes of that Fund next after the rates on Government property, and be apportioned between the congested districts counties in proportion to their population.*

(4.) *The local grants under the accounts headed "Model Schools and National Schools" shall not form part of the contingent portion of the Guarantee Fund for a congested districts county.*

(5.) *Where under this Act a sum is required to be raised by a levy on a county from which a congested districts county is separated, no portion of it shall be presented or applotted upon or raised out of any hereditaments in the latter county.*

(6.) *Where under this Act a sum is required to be raised by a levy on a congested districts county, one half of that sum shall be paid out of the share of the county in the interest on the Church Surplus Grant, so far as that share extends; and the residue shall be raised by the Lord Lieutenant by a*

Repealed by sections 73 and 103 of the Irish Land Act, 1903, *post.*

36.—*continued.*

levy on the county, and the requisition may be sent to the secretary of the grand jury of the entire county, and the same shall be paid accordingly, but shall solely be presented and applotted upon and raised out of the hereditaments within the congested districts county.

37.—(1.) For the purpose of amalgamating small holdings in a congested districts county, the Congested Districts Board may—

(*a*) out of the moneys at their disposal, give special aid to the migration or emigration of any occupier of a holding, with his family, if any, and settling such migrant or emigrant under favourable circumstances in the place to which he first migrates or emigrates, on condition that he transfers his interest in that holding to an occupier of a neighbouring holding and that the holdings are amalgamated, or that he transfers such interest to the Land Commission; and

The Board never gave any special aid towards the emigration of the inhabitants of the congested districts. The migration that the section apparently contemplates is that of tenants upon estates that have not been bought by the Board, and, for reasons explained in the Report, it has been found practically impossible to effect migration in such cases.

(*b*) recommend the Land Commission to facilitate the amalgamation of small holdings, which the Land Commission are hereby authorised to do, whether by the apportionment of a purchase-annuity and of the guarantee deposit, or by a sale to a tenant, or by making an advance towards the purchase of an interest in a holding; and any such advance may be made out of money supplied by the Board, and shall be repaid by an annuity charged on the holding as if the advance were made under the Land Purchase Acts, but all sums received by the Land Commission on account of such annuity shall be paid to the Board. The annuity may be charged on the amalgamated holding, and not merely on the holding purchased, subject, nevertheless, to any prior charges on such portion of the holding as has not been purchased, and subject to any rent of either holding.

The power subsequently given to the Board by the Act of 1893, *post*, to acquire and hold land through its trustees has rendered unnecessary the utilisation of the Land Commission in this way contemplated throughout sections 37 and 38.

(2.) Provided that no holding shall be increased by amalgamation under this section so that in the opinion of the Board the rateable value will exceed twenty pounds.

It has been already indicated that the Board cannot hope, with the land available, to enlarge holdings up to a standard of £20 valuation, and no holding already of that value requires enlargement by the Board.

37.—*continued.*

(3.) In a congested districts county a small holding purchased by means of an advance by the issue of stock under this Act, shall not during the continuance of the purchase-annuity charged thereon be sold, except to the occupier of a holding in the neighbourhood or to the Land Commission, and if it is, the Land Commission may cause the holding to be sold as if for a breach of condition under Section thirty of the Land Law (Ireland) Act, 1881.

In the definition clause a small holding is defined as a holding of a rateable value of less than £10 or any higher sum fixed by the Congested Districts Board.

An extension of this restriction has been recommended, see paragraph 232.

(4.) The purchase by the Land Commission of a holding shall be made through the Congested Districts Board, and out of moneys provided by the Board, and for such price as may be agreed on by the vendor and the Board, or, in case of difference, may be determined by the Land Commission to be its full market value.

(5.) Where a small holding in a congested districts county is (whether under this section or the Land Purchase Acts), liable to be sold, or has been purchased by the Land Commission, the Land Commission shall endeavour to sell the same to one of the occupiers of a neighbouring holdings with a view to the holdings being amalgamated.

(6.) The sale may be made upon such terms and conditions and at such price as the Land Commission fix, and the price may not be greater than the difference between the value of the two holdings after amalgamation, and the value of the purchaser's holding before amalgamation.

(7.) The purchase money may be advanced as if it were for a purchase under the Land Purchase Acts, save that the annuity shall be charged on the amalgamated holding, and not merely on the holding purchased, subject nevertheless to any prior charges on such portion of the holding as has not been purchased.

38.—(1.) On a holding amalgamated in pursuance of this Act, one house only shall be used as a dwelling-house, and if more than one house is so used, the Land Commission shall, except where that use is permitted as hereinafter mentioned, cause the holding to be sold as if for a breach of condition under Section thirty of the Land Law (Ireland) Act, 1881.

These restrictions with the necessary modifications might be continued as part of the general powers of supervision to be exercised by the Board (see especially paragraphs 230-1).

38.—*continued.*

(2.) Provided that the Congested Districts Board, if they think special reasons justify the course, may request the Land Commission to permit, and thereupon the Land Commission shall permit, the former occupier of another house on the amalgamated holding or a member of his family to become and be caretaker of such other house, and of any yard and garden attached thereto, not exceeding one-quarter of an acre, for such limited time and on such conditions as the Board approve.

(3.) Where a holding amalgamated in pursuance of this Act is of less value than the holdings out of which it was amalgamated, either because only one house can be used as a dwelling-house on an amalgamated holding, or otherwise by reason of the amalgamation, the Land Commission may, and on the request of the Congested Districts Board shall, certify the amount of the difference, and that amount shall be paid by the Board out of the moneys at their disposal to the person or department on whom loss has fallen, and if paid to the Land Commission shall be applied towards the discharge of the purchase annuity on the holding.

See note to Section 37 (1) (*b*).

(4.) The provisions of this Act respecting amalgamation of holdings shall, in cases where the Congested Districts Board think it expedient, apply to a part of a holding.

39.—(1.) The Congested Districts Board may take such steps as they think proper for—

(*a*) aiding migration or emigration from any electoral division, which either forms part of a congested districts county, or the total rateable value of which, when divided by the number of the population, gives a sum of less than one pound ten shillings for each individual, and settling any migrant or emigrant under favourable circumstances in the place to which he first migrates or emigrates; and

(*b*) providing suitable seed potatoes and seed oats for sale to occupiers in any such electoral division; and

Apparently the Board could under these sections aid emigration or migration from, or supply seed potatoes and seed oats to, occupiers in, not merely scheduled electoral divisions, but also electoral divisions under the 30*s.* limit in any county in Ireland, but no steps have ever been taken in this matter, and whilst, of course, the Board's powers of aiding migration must be maintained, it does not seem desirable to continue these nominal powers of operating outside the enlarged area specifically assigned to the Board.

39.—*continued.*

(*c*) aiding and developing agriculture, forestry, the breeding of live stock and poultry, weaving, spinning, fishing (including the construction of piers and harbours, and the supply of fishing boats and gear, and industries connected with and subservient to fishing) and any other suitable industries; *and for the purposes of Part II. of this Act the Land Commission may acquire (by purchase or taking on lease) and hold land, and may place such land under the control of the Congested Districts Board on such terms and conditions as they may deem expedient.*

As regards the construction of piers and harbours, the council of any county may, under section 18 of the Local Government Act, 1898, if they think fit, agree to take over from the Congested Districts Board any marine works constructed or acquired by such Board subject to payment of compensation to persons other than the Board.

The words in italics were repealed by the Congested Districts Board Act of 1893, sections 2 (4) *post.*

(2.) The said seed shall be sold for ready money, and, where such price can be obtained for the same, for not less than the cost of the seed (including all expenses incurred for carriage, storage, or otherwise) except so far as such cost may be defrayed out of gifts specially given to the Board for that purpose.

(3.) Any person nominated by the Board may, at all reasonable times, and after due notice to the occupier, enter any land occupied by an occupier to whom seed has been sold, and ascertain whether it has been properly sown.

(4.) The Board may proceed under this section directly or indirectly, and by the application of money at their disposal or otherwise, and may make gifts or loans to any persons upon and subject to such conditions as the Board consider expedient, and any moneys received in respect of the principal or interest of the loans may be applied as part of the money placed at the disposal of the Board.

Much of the work done by the Board is in virtue of the spending powers conferred by this section.

40.—(1.) *The Lord Lieutenant may direct the officers of the Land Commission to discharge such secretarial and other duties for the Board as he thinks proper, and for that purpose officers may be added to the permanent staff of the Land Commission, and if the Lord Lieutenant thinks those officers are insufficient, he may, with the sanction of the Treasury, authorise the Board to employ such officers as are required.*

This sub-section was repealed by the Congested Districts Board Act, 1894, section 3, *post.*

40.—*continued.*

(2.) Any member of the Board shall be eligible to act as an officer under this section for any temporary purpose, but so long as he is employed as such officer he shall not act as a member of the Board.

This sub-section will require modification in view of the proposal that there should be paid members of the Board, who would also act as officers of the Board.

(3.) The salaries or remuneration of the officers (if any) employed by the Board and the administrative expenses of the Board shall be fixed by the Treasury, and paid out of moneys provided by Parliament.

This sub-section has been inoperative in part since 1894, and entirely since 1899.

(4.) The Congested Districts Board may accept any gifts of property real or personal for all or any of the purposes for which money is provided under this part of this Act, and apply them according to the directions of the giver, if consistent in their opinion with the principles on which they apply the said money, and, subject to any such directions, may apply them in like manner as that money.

(5.) *Any property given to the Board, and any investments made by or securities given to the Board, may be held, and given to the Land Commission, and shall be held by the Land Commission in trust for the purposes of this part of this Act, or such of them as the circumstances of the case require.*

Repealed by Congested Districts Board Act, 1893, section 2 (4) *post.*

(6.) The Congested Districts Board shall submit to the Treasury annually and at any other time for any special purpose, in the form fixed by the Treasury, an estimate showing the amount proposed by the Board to be expended, and shall not expend any sums except in accordance with such estimate when approved by the Treasury, and shall not create any permanent charge on the Church Surplus Grant, except that they may, with the sanction of the Treasury, borrow out of the moneys available for local loans in Ireland on the security of the annual income of the Church Surplus Grant such sum as, having regard to the liabilities of such income for the purposes of the Guarantee Fund and the other moneys at the disposal of the Board, the Treasury consider can be properly borrowed without danger to the security given by the Guarantee Fund.

See also section 35 (3) *supra.*

(7.) The Board shall keep such accounts of their receipts and expenditure, and those accounts shall be audited in accordance with such regulations, as the Treasury direct, and be laid before Parliament.

41. The Congested Districts Board shall, once in every year, after the year one thousand eight hundred and ninety-one, make a report to the Lord Lieutenant on their proceedings under this Act, and every such report shall be presented to Parliament.

PUBLIC WORKS LOANS ACT, 1892 (Section 4).

4. Whereas by section thirty-five of the Purchase of Land (Ireland) Act, 1891, the Irish Reproductive Loan Fund and the Sea and Coast Fisheries Fund, including all monies due on foot of loans and for interest, dividends, and other annual income payable on foot of such funds, save as in that section mentioned, were placed at the disposal of the Congested Districts Board for Ireland for the purposes of that Act, and it is expedient to confer on that Board the powers and remedies for the recovery of the said monies possessed by the Commissioners of Public Works in Ireland; therefore the Congested Districts Board for Ireland shall have and may exercise for the recovery of any money due on foot of loans made by them out of the funds aforesaid or otherwise payable on foot thereof all such powers and remedies as are possessed in that behalf by the Commissioners of Public Works in Ireland, and a certificate under the hand of the Secretary to the said Board stating the amount due in respect of any such loan together with interest thereon, and any costs and charges in respect of any such loan or the recovery thereof shall have the same effect as a like certificate under the seal of the said Commissioners.

This section confers summary powers on the Board for recovery of monies due out of these funds, which they do not possess as regards other funds, and it would seem desirable to extend the powers to other debts due to the Board, and so enable the Board to proceed for their recovery at Petty Sessions instead of in the County Court, and to have the warrant placed in the hands of the local police for levying instead of with the sheriff.

CONGESTED DISTRICTS BOARD (IRELAND) ACT, 1893.

1. This Act may be cited as the Congested Districts Board (Ireland) Act, 1893, and shall be construed as one with Part Two of the Purchase of Land (Ireland) Act, 1891.

2.—(1.) The Congested Districts Board for Ireland may acquire land for the purposes of Part Two of the Purchase of Land (Ireland) Act, 1891, and of enlarging small holdings in a congested districts county, and shall

See notes on Sections 37, 38, & 39 of Act of 1891 (*supra*.)

2.—*continued.*

be landlords of all land so acquired within the meaning of the Land Purchase (Ireland) Acts, 1870 to 1891.

(2.) For the purpose of holding land so acquired, or any property given to or investments made by or securities given to the Board, the names of such two members of the Board, as the Board from time to time appoint, shall be enrolled in the High Court as "Trustees of the Congested Districts Board for Ireland"; and land, securities, and other property acquired by or given to the Board shall be held by such trustees under that name in trust for the Board, and notwithstanding any change in the persons who are trustees, shall, without any conveyance or assurance, vest in the trustees for the time being so enrolled, and shall be dealt with by them as the Congested Districts Board direct.

This provision would be unnecessary if the Board be created a corporate body as suggested.

(3.) All land heretofore acquired by the Land Commission on behalf of the Congested Districts Board shall, upon the enrolment of trustees under this Act, vest in those trustees by virtue of this Act without any conveyance, and shall be deemed to have been duly acquired by the Congested Districts Board for the purposes authorised by this Act.

(4.) So much of section thirty-nine of the Purchase of Land (Ireland) Act, 1891, as relates to the acquiring and holding of land by the Land Commission, and sub-section five of section forty of the said Act, are hereby repealed.

CONGESTED DISTRICTS BOARD.—(IRELAND) ACT, 1894.

1.—(1.) Where the Congested Districts Board sell land to a tenant, and the Land Commission make an advance for the purchase of such land, the said Board may give to the Land Commission both or either of the following guarantees:—

(*a*) That the Board will make good any default by the purchaser to the extent to which it might have been made good out of the guarantee deposit; and

(*b*) if by reason of the tenant purchasing an addition to his holding or for any other special reason it seems desirable, then that during eighteen years from the date of the

Guarantee deposits were abolished by section 11 of the Act of 1903.

1.—*continued.*

advance the Board guarantee the payment of all sums against which the purchaser's insurance money might otherwise have been set off by the Land Commission, and where the first of such guarantees is given the Land Commission shall not require or retain out of the advance the guarantee deposit, and where the second of such guarantees is given the annuity for the repayment of the advance shall be at the rate of four per cent. per annum on the advance.

Purchaser's insurance money (a special temporary addition made to the purchaser's annuity under the 8th section of the Act of 1891, where the annuity would otherwise be less than eighty per cent. of the annual value) was abolished by the 28th section of the Act of 1896.

The Board, under the 81st section of the Act of 1903 (*post*), continues to be liable for any default made by tenant-purchasers who have re-bought from the Board, where that body, in order to avoid a second inspection for value and delays, have given a certificate under the 80th section of the Act of 1903 that the holding is sufficient security for the repayment of the advance.

(2.) The sums payable by the Congested Districts Board under any such guarantee shall be paid out of the money at the disposal of the Board, and shall be applied in like manner as if they had been paid out of the guarantee deposit or set off against the purchaser's insurance money, as the case may be.

(3.) All sums so paid by the Board shall be debts from the purchaser to the Board, and be a charge on the holding purchased next after the purchase annuity.

(4.) The Congested Districts Board shall not give guarantees under this section to an amount exceeding in the aggregate such sum as the Treasury, having regard to the liabilities of the Congested Districts Board, may fix for the purpose of preventing any loss to the Exchequer.

2. For the purpose of the taking of land by the Congested Districts Board, the Lands Clauses Acts (except the provisions thereof with respect to the purchase and taking of land otherwise than by agreement) shall be incorporated with the Congested Districts Board (Ireland) Acts, and the enactments so incorporated shall be construed as if the Congested Districts Board were the promoters of the undertaking.

The larger powers now recommended for the Board in this respect would cover the powers conferred under this section.

3.—(1.) The Lord Lieutenant may, with the sanction of the Treasury as to number and remuneration, authorise the Congested Districts Board to appoint to the permanent staff of the Land Commission such officers as may be required for the purposes of the Board.

This section has been inoperative in consequence of the arrangement made by the Treasury when the Board received a nominal addition to their income of £25,000 per annum under the Act of 1899. See also note to Section 40 (3) of the Act of 1891.

3.—*continued.*

(2.) Every officer so appointed, not being the secretary or assistant secretary, shall be selected by open competition in accordance with regulations made by the Civil Service Commissioners and approved by the Lord Lieutenant.

(3.) The Lord Lieutenant may also, with the sanction of the Treasury as to number and as to remuneration payable out of moneys voted by Parliament, authorise the Board to employ temporarily such persons as the Board may require.

(4.) Sub-section one of section forty of the Purchase of Land (Ireland) Act, 1891, is hereby repealed.

4. (1.) This Act may be cited as the Congested Districts Board (Ireland) Act, 1894.

(2.) Part two of the Purchase of Land (Ireland) Act, 1891, section four of the Public Works Loan Act, 1892, the Congested Districts Board (Ireland) Act, 1893, and this Act, are referred to in this Act as the Congested Districts Board (Ireland) Acts, and together with this Act, may be cited collectively.

LAND LAW (IRELAND) ACT, 1896 (Section 43–5).

43.—(1.) *Where the Congested Districts Board have agreed to purchase land, whether in a congested districts county or elsewhere, the Land Commission, on a request from the Board stating the congested districts county for the benefit of which the land is purchased, and the amount of the purchase-money, shall, subject as in this section mentioned, advance the purchase-money to the Board in like manner as if the Board were a tenant purchasing his holding under the Land Purchase Acts, as amended by this Act.*

(2.) *The advance shall not be made, if it exceeds, or together with any previous advance on account of the county for the benefit of which the land is purchased not repaid or written off will exceed, twenty-five times the share of the county in the interest on the Church Surplus Grant (referred to in section thirty-five of the Purchase of Land (Ireland) Act, 1891), after deducting from that share any prior*

These sub-sections were repealed by section 103 of the Act of 1903, as the powers herein contained were extended by that Act. See Sect. 72 (*post.*)

43.—*continued.*

charges, whether under this section or otherwise, including such proportion of contingent charges under Part Two of the Purchase of Land (Ireland) Act, 1891, as the Treasury may fix.

(3.) *The advance shall be repaid by the Board by an annuity of the same amount, and involving the same interest and sum for repayment of capital, as if it were an annuity payable by a tenant purchasing his holding, and the amount of such annuity shall be deducted by the Land Commission from the interest on the Church Surplus Grant.*

(4.) *Where the Land Commission make an advance to a tenant for the purchase of his holding from the Congested Districts Board, the amount of the advance shall be written off the debt due from the Board for advances made to them on account of the congested districts county, for the benefit of which the Board purchased the land, in such manner as may be arranged between the Land Commission and the Board, and shall be treated as the redemption of a proportionate part of the annuities payable by the Board to the Land Commission.*

(5.) *Where land is purchased by the Congested Districts Board for the benefit of more than one congested districts county, the Board shall state in their request to the Land Commission the proportion of the purchase-money which is to be treated as being advanced for the benefit of each county.*

These sub-sections were repealed by section 103 of the Act of 1903, as the powers herein contained were extended by that Act. See sect. 72 (*post*).

(6.) *The Land Commission shall not make any advance in respect of any purchase by a tenant from the Board of a small holding, as defined in the Purchase of Land (Ireland) Act, 1891.*

This sub-section (see paragraph 29 in Report) was repealed by the Congested Districts Board Act, 1899, section 4 (*post*).

(7.) The Congested Districts Board shall not buy any land held under a lease for a term of years of which less than sixty are unexpired at the time of the sale, unless they hold or buy the reversion expectant upon the determination of such lease.

44. (1.) The Congested Districts Board may sell land to a tenant of a small holding for the price agreed upon, and credit the purchaser with the whole or any part of the purchase-money, and such purchase-money, shall be secured to the satisfaction of

44.—*continued.*

the Board, and be payable by such annuity payable half-yearly, and calculated at such rate of interest as may be agreed on.

(2.) For carrying such sale into effect the Trustees of the Congested Districts Board may convey the land to the purchaser charged with the said annuity; but the conveyance shall not operate to convert the interest of the purchaser in the holding into real estate.

(3.) The particulars of such conveyance may be communicated to the Land Commission and thereafter they shall issue half-yearly applications for payment of the half-yearly instalments of the annuity charged on the holding, and shall credit or pay to the Congested Districts Board all sums received by the Commission in respect thereof, and shall furnish to the Board particulars of all instalments for which they issue applications under this section, showing which have and which have not been paid.

(4.) The Trustees of the Congested Districts Board shall have for the recovery of any such instalments unpaid the same remedies as the Land Commission have for the recovery of unpaid instalments of an annuity under the Land Purchase Acts.

(5.) Holdings purchased under this section, while subject to any annuity for the payment of purchase-money, *shall not be subject to the provisions of the Local Registration of Title (Ireland) Act, 1891, but* shall be subject to all the provisions of the Land Purchase Acts respecting a holding subject to an annuity under those Acts; and the powers under those provisions to require a holding to be sold when sub-divided by reason of the death of the proprietor, may be exercised within twelve months after the sub-division becomes known to the Congested Districts Board, notwithstanding that it is more than twelve months after the death.

(6.) Whenever, upon the amalgamation of small holdings, part of the amalgamated holding is subject to an annuity under this section, and the amalgamated holding is not a small holding, the Congested Districts Board may agree with the occupier of such amalgamated holding for the purchase

These sub-sections have been rendered largely inoperative by the further powers conferred under the Act of 1903, but a modification of sub-section (4) may be of use to the Board for recovering instalments from the tenant-purchasers on Clare Island and the Leonard Estate, which were not sold under the Land Purchase Acts.

The words in italics were repealed by section 3 of the Act of 1899, *post.*

44.—*continued.*

by him of that holding under the Land Purchase Acts, and the Land Commission may sanction the agreement and make an advance as if such occupier was in occupation of the whole of such holding under a contract of tenancy.

(7.) On such last-mentioned advance being made by the Land Commission, the balance of the principal of the purchase-money payable by the annuity under this section shall be treated as repaid to the Board out of the advance, and the purchaser and the holding shall be discharged from all liability in respect of the said annuity.

CONGESTED DISTRICTS BOARD (IRELAND) ACT, 1899.

1. Where the Congested Districts Board make an offer to the Land Judge for the purchase of an estate, or part of an estate, for the purpose of re-selling the same to the tenants thereon, the provisions of section forty of the Land Law (Ireland) Act, 1896 (in this Act referred to as the principal Act), shall be suspended, and shall not have effect in the case of that estate, or part of an estate, unless and until the offer is refused by the Land Judge, or is withdrawn.

2.—(1.) Where the Land Commission have made an advance to the Congested Districts Board under subsection (1) of section forty-three of the principal Act, and the land purchased by the Board is subject to any superior interest, as defined by section thirty-one of the principal Act, or any incumbrance, as defined by section thirty-four of the Land Law (Ireland) Act, 1887, the Land Commission may, on the application of the Board, exercise any powers for the apportionment and redemption of superior interests conferred on them by the Land Purchase Acts, and may direct that a sum of guaranteed land stock equivalent at the price of the day to the redemption price of the superior interest, or the amount due in respect of such incumbrance, as the case may be, shall be advanced and disposed of in like manner as if the advance were made to a tenant for the purchase of his

This Section has been practically superseded by the powers conferred in the Act of 1903.

2.—*continued.*

holding, and the amount of such advance shall be repaid by the Board in the manner provided by sub-section (3) of the said section forty-three.

(2.) Rules for the purposes of this section may be made by the Land Commission, and shall be laid before Parliament.

3.—(1.) *Notwithstanding anything in sub-section* (1) *of section forty-three of the principal Act, the Land Commission shall not make an advance under that sub-section unless the ownership of the land is registered under the Local Registration of Title (Ireland) Act,* 1891.

(2.) *Where the ownership of any land has been registered under the said Act of* 1891, *after the date of an agreement for the sale thereof to the Congested Districts Board, no fee shall be payable to the Local Registration of Title Office on the transfer to the trustees of the Board of that land, and in no case shall any such fee be payable on any sale by that Board to a tenant of his holding upon any land the ownership of which is registered.*

(3.) *So much of sub-section* (5) *of section forty-four of the principal Act as exempts the holdings therein mentioned from the provisions of the said Act of* 1891 *is hereby repealed.*

(4.) *No stamp duty shall be payable on any purchase of land by the Board for the purpose of sales to tenants.*

Repealed by section 103 of the Act of 1903. (See also sections 49 and 50).

4.—(1.) *The limit provided by sub-section* (2) *of section forty-three of the principal Act in respect of advances which may be made by the Land Commission to the Congested Districts Board may, in exceptional cases, with the consent of the Treasury, be exceeded to such extent and for such periods as the Treasury may determine.*

Repealed by Purchase of Land (Ireland) Act, 1901, section 1 (3).

(2.) Sub-section (6) of the said section forty-three (which prohibits the Land Commission from making an advance in respect of the purchase of a small holding) is hereby repealed.

5. For the purposes of sub-section (3) of section forty of the Purchase of Land (Ireland) Act, 1891, and for other purposes of the Congested Districts Board (Ireland) Acts, there shall be paid, as from the first day of October, one thousand eight hundred and ninety-nine, to the Congested Districts Board, subject to such conditions as the Treasury may require, out of money provided by Parliament, an annual sum not exceeding twenty-five thousand pounds.

6.—(1.) This Act may be cited as the Congested Districts Board (Ireland) Act, 1899.

(2.) This Act shall be construed as one with the Congested Districts Board (Ireland) Acts, and together with those Acts may be cited collectively.

PURCHASE OF LAND (IRELAND) ACT, 1901.

1. —(1.) Where it appears to the Lord Lieutenant that it is expedient that the limit provided by sub-section (1) of section nine of the Purchase of Land (Ireland) Act, 1891, with respect to the advances which may be made in any county should be exceeded, he may certify to that effect to the Treasury, and the Treasury may authorise advances to be made in that county, to such increased amount as may be determined by them, not exceeding fifty times the share of the county in the guarantee fund, where they are of opinion that such advances can be made up to that increased amount without risk of loss to the Exchequer.

By the Act of 1903, section 40 (4), the limit was raised from fifty to sixty times the share of the county in the guarantee fund.

(2.) *The Lord Lieutenant may certify to the like effect with respect to the limit provided by sub-section* (2) *of section forty-three of the Land Law (Ireland) Act*, 1896, *and in such case the Treasury may authorise advances to be made under that section for the benefit of the county mentioned in such certificate to such increased amount as may be determined by them, not exceeding fifty times the share of the county in the interest on the church surplus grant, after making the deductions in the said sub-section mentioned, where they are of the same opinion as aforesaid.*

Repealed by the Act of 1903, section 103. See also sections 40 (4) and 73.

1.—*continued.*

(3.) *Sub-section* (1) *of section four of the Congested Districts Board* (*Ireland*) *Act*, 1899 (*which extends the limit under section forty-three of the Land Law* (*Ireland*) *Act*, 1896), *is hereby repealed.*

Repealed by the Act of 1903, section 103.

2. This Act may be cited as the Purchase of Land (Ireland) Act, 1901.

CONGESTED DISTRICTS BOARD (IRELAND) ACT, 1901.

1.—(1.) Where the Congested Districts Board have, whether before or after the passing of this Act, purchased an estate and the tenants of holdings thereon to the extent of not less than three-fourths in number and rateable value so request, the Board may serve a notice on any tenant thereon which shall have the effect of determining his tenancy in his holding as from the date mentioned in the notice, not being less than six months from the service thereof.

(2) Every such notice shall contain an undertaking by the Board that they will within the period mentioned in that behalf in the notice, or so soon thereafter as practicable, provide the tenant with a new holding on the same or an adjacent or neighbouring estate, subject to a rent not exceeding that payable by him for his original holding, and of not less value in respect of the land comprised in the new holding and the buildings and improvements thereon than the value of the land comprised in the former holding, and the buildings and improvements thereon respectively at the date of the purchase of the estate by the Board.

(3) If any such tenant is dissatisfied with his new holding, or refuses to enter into possession thereof, he may, within four months after he has been served with a notice stating that the Board are prepared forthwith to put him into possession thereof, apply to the county court within the jurisdiction of which the estate is situate, and that court may, subject to rules of court, hear and decide upon the application.

(4) If where the tenant is dissatisfied with the new holding the Court decides that the value thereof is, in

Section 82 (1) of the Act of 1903 empowered the Board to exercise the powers conferred by this section on a request made by not less than three-fourths in number and rateable value of the tenants of holdings situate on any town lands that would be affected by the exercise of these powers.

As has been mentioned in the Report, the Board have not found it possible to exercise these powers.

More extensive powers in this respect are proposed in the Report.

1.—*continued.*

respect of any of the matters aforesaid, less than the value of the former holding, the Court may, after taking into account in connection with such inferiority in value the rent payable for the new holding, and every circumstance which the Court considers material, order such compensation as it may deem fit to be paid by the Board to the tenant, and, in addition, or as an alternative, may order the Board to erect such buildings, or make such other improvements on the holdings, as the Court may think reasonable.

(5) Where a tenant refuses to enter into possession of the new holding, the Court may order the payment to him by the Board of such sum as, in the opinion of the Court, is equal to the value of his interest in his former holding.

(6.) The county court may, upon application, order that such charges, liabilities, and equities as affect the tenant's interest in his former holding shall either continue to affect that holding, or be transferred to his new holding.

As has been mentioned in the Report, the Board have not found it possible to exercise these powers.

More extensive powers in this respect are proposed in the Report.

(7.) Any decision of the county court under this section shall be final, and any notice under this section determing a tenancy may be enforced by a writ of possession of the county court, but no such writ shall be executed in pursuance of this section in the case of any tenant until the Board certify to the sheriff that they are prepared forthwith to put such tenant into possession of his new holding.

(8.) Where a matter requiring the cognizance of the Court under this section arises in respect of an estate situate within the jurisdiction of more than one county court, the county court, within the jurisdiction of which the greater part in rateable value of the estate is situate, shall take cognizance of the matter.

(9.) Every notice under this section shall be served on the tenant affected thereby, either personally, or by leaving the same at his residence, or by transmitting the same by registered letter to his last known address.

1.—*continued.*

(10.) The Court may award costs to or against any party to any proceedings under this section, and in addition to any other power, may, where of opinion that a reasonable offer for the payment of compensation, or the execution of any works has been made by the Board, order a tenant to pay any costs incurred by the Board after the date of the offer. Any costs ordered to be paid by a tenant under this section may be deducted from any compensation payable to him thereunder.

(11.) Rules of court may regulate the practice and procedure under this section.

(12.) In this section the expression "estate" includes part of an estate.

As has been mentioned in the Report, the Board have not found it possible to exercise these powers. More extensive powers in this respect are proposed in the Report.

2. The right to enter upon a holding during the continuance of a statutory term conferred on a landlord by sub-section (5) of section five of the Land Law (Ireland) Act, 1881, for the purposes therein specified, is hereby conferred on the Congested Districts Board and any person authorised by them in that behalf, in respect of any holding not subject to a statutory term which is situate upon land purchased by that Board; and for enforcing the right conferred by this section the Board shall have the like remedies as in the case of a holding subject to a statutory term.

3. Where the Congested Districts Board have, whether before or after the passing of this Act, purchased land elsewhere than in a congested districts county, the Lord Lieutenant may, if he thinks fit on the report of the Board by Order in Council, declare that for the purposes of this section the land shall be treated as part of such congested districts county as he may determine, and the Board shall thereupon have, with respect to that land, all the powers conferred on them by the Congested Districts Board (Ireland) Acts as amended by this Act.

This section would have no meaning under the power suggested in the Report, though somewhat analogous powers might be required where grass land outside the Board's area is placed at their disposal by the Land Commission.

4.—(1.) This Act may be cited as the Congested Districts Board (Ireland) Act, 1901.

(2.) This Act shall be construed and may be cited with the Congested Districts Board (Ireland) Acts.

IRISH LAND ACT, 1903.
PART II.
(SECTIONS 72–85).

72.—(1.) The sums required by the Congested Districts Board for advances for the purchase of land shall be paid to them out of advances made by the National Debt Commissioners to the Land Commission under this Act, and all payments so made shall be deemed to be advances made to the Land Commission for the purposes of the Land Purchase Acts, and shall be treated accordingly. .

(2.) Until the Congested Districts Board have disposed of the land so purchased by them to purchasers under the Land Purchase Acts, interest shall be paid by the Board to the Land Commission at the rate of two and three-quarters per cent. per annum on all sums so advanced, and for the time being outstanding, in such amounts and at such times as may be prescribed; provided that if after the expiration of five years any land so purchased has not been disposed of, payments on account of sinking fund, at the rate of ten shillings per cent. per annum, shall be made by the Board to the Commission. All such interest and sinking fund payments shall be a charge on and paid out of the annual income of the Board.

(3.) Regulations made by the Treasury may provide that where the Congested Districts Board have expended money on the improvement of an estate, and in consequence have sold parcels of that estate at an enhanced price to tenants or others, the National Debt Commissioners may advance to the Land Commission, for repayment to the Congested Districts Board, such sums as represent the increase of price consequent on the improvements.

73. For the purposes of the Guarantee Fund a congested districts county shall cease to be separated from the county in which it is geographically situate, and the local grants, under the accounts headed "Model Schools and National Schools," shall form part of the contingent portion of that fund throughout the whole administrative county, and the interest on the Church Surplus Grant shall cease to form part of that fund in any electoral division of the county.

74. There shall not be at any time vested in the trustees of the Congested Districts Board untenanted lands exceeding in the aggregate, according to the estimate of the Land Commission as approved by the Treasury, the capital value of thirty times the interest on the Church Surplus Grant.

75.—(1.) Where the Congested Districts Board purchase land for the benefit of a congested districts county, they may sell under the Land Purchase Acts any parcels thereof which are not required for tenants of holdings in that county, to any tenants or proprietors of holdings, not exceeding five pounds in rateable value, on an estate adjacent to or in the neighbourhood of that land, or to any sons of such tenants.

(2.) The provisions of this Act, with respect to the application of the Land Purchase Acts to parcels of land, shall apply in the case of the sale of any such parcel.

If the proposals contained in the Report be adopted, the Board will be free to sell any lands to tenants or proprietors of any holdings within their area, and any land that is not required for the enlargement of holdings to any sons of tenants, but as the Commission are of opinion that this power should be very sparingly exercised, it was recommended the Board should be under a statutory obligation to give full particulars in their Annual Reports, wherever they give a holding to a man, who, at the date of the creation of the new Board, was not a landholder.

76.—(1) Where a parcel of an estate purchased by the Congested Districts Board is resold to the vendor or to the trustees of a settlement, an advance under the Land Purchase Acts may be made to him, not exceeding in any case one-third of the purchase money of the estate, or twenty thousand pounds, whichever is the less.

(2) Sub-section four and sub-section six of section three of this Act shall apply in the case of any land in respect of which an advance is made in pursuance of this section.

The sub-sections referred to are as follows :—

3. (4.) Where any land is resold in pursuance of this section a Judicial Commissioner may, if he thinks it equitable, on the application within the prescribed time of any person who, at the date of the sale of the land to the Land Commission, was entitled to any estate in remainder or reversion in that land, order, upon such terms and conditions as he may think reasonable, that the land so resold shall devolve in accordance with the terms of the settlement which at the date of the sale to the Land Commission affected it.

(6.) Any land resold in pursuance of this section shall not be subject to the provisions of the Local Registration of Title (Ireland) Act, 1891, relating to the devolution of freehold registered land.

77.—(1) For the purpose of the purchase by the Congested Districts Board of an estate from the Land Judge, the provisions of this Act with respect to the powers and duties of the Land Judge in relation to an offer of the Land Commission, shall apply with the substitution of the Congested Districts Board for the Land Commission.

(2) An order of the Land Judge declaring the Congested Districts Board to be purchasers of any land shall have the effect of a conveyance made by him, and shall also vest in the Board the right to collect and recover any arrears of rent specified in the order, and a certified copy of the order shall be transmitted to the registering authority under the Local Registration of Title (Ireland) Act, 1891, and the trustees of the Board shall thereupon be registered under that Act as the absolute owners of the land.

78. The Congested Districts Board shall have, in the case of an estate purchased by them, all the powers with respect to regulations authorising the cutting or making of turf on holdings, conferred on the Land Commission by the provisions in that behalf of Part One of this Act, and those provisions shall apply accordingly with the substitution of the Congested Districts Board for the Land Commission.

79.—(1.) The Congested Districts Board may enter into agreements for the purchase of land from any person who may be certified by the Estates Commissioners to be a person who may be dealt with as the owner of the land in accordance with the provisions of Part One of this Act or otherwise, and those Commissioners shall, in such manner as may be prescribed by rules to be made by the Lord Lieutenant, prepare all such agreements and make orders consequential thereon vesting land in the trustees of the Congested Districts Board.

(2.) Where a vesting order is made in pursuance of this section the purchase money shall be distributed by the Land Commission in like manner as if it were the purchase money of land vested in the Commission, and all the provisions of Part One of this Act with respect to the distribution of the purchase money of land so vested shall apply accordingly.

80. Where an application is made to the Land Commission for an advance under the Land Purchase Acts to a person purchasing any land from the Congested Districts Board, and that Board certify that the land is in their opinion sufficient security for the repayment of the advance, the Land Commission shall sanction the advance.

81. If at any time the arrears of any purchase annuity payable in respect of an advance, sanctioned in pursuance of a certificate of the Congested Districts Board, are declared by the Land Commission to be irrecoverable, that Board shall pay, out of the interest on the Church Surplus Grant, to the Land Purchase Account, the amount of those arrears.

82.—(1) The Congested Districts Board may exercise the powers conferred on them by section one of the Congested Districts Board (Ireland) Act, 1901, on a request made by not less than three-fourths in number and rateable value of the tenants of holdings situate on any townlands which would be affected by the exercise of those powers in the event of the request being acceded to.

See p. 146.

(2) The provisions of the said section one as to an order of the county court respecting charges, liabilities, and equities affecting a tenant's interest in a holding shall apply where, with the consent of a tenant, the area of his holding is altered, or he is put into possession of a new holding, by the Congested Districts Board.

83. The resumption of a holding during the continuance of a statutory term by the Congested Districts Board may be authorised under sub-section six of section five of the Act of 1881 for the purposes of migration or the enlargements of holdings, in addition to the purposes specified in that sub-section.

84. The Under Secretary to the Lord Lieutenant shall be *ex-officio* a member of the Congested Districts Board in lieu of the member of the Land Commission nominated under sub-section one of section thirty-four of the Act of 1891.

See note to sect. 34 (1) of the Act of 1891.

85. Section eighteen of the Agriculture and Technical Instruction (Ireland) Act, 1899, which makes provision with respect to congested districts counties, is hereby repealed.

The Agriculture and Technical Instruction Act, 1899, section 18, prohibited the Department from expending any of its funds in, or in relation to a congested districts county.

NOTES BY COMMISSIONERS.

MINUTE OF DISSENT BY SIR A. P. MacDONNELL.

I have signed the Report because I agree with the greater part of it, and because I am in hearty sympathy with the spirit of humanity and benevolence towards the Western peasantry which pervades it. But I am regretfully compelled to dissent on many points of principle, organisation, and method, and therefore my signature of the Report must be taken as qualified by this Minute of Dissent.

The difference between the majority of my colleagues and myself is, I am consoled to know, not so much a difference of general sentiment or of ends to be attained, as a difference of means and method. We are unanimous in thinking that the condition of congestion prevailing in large regions of the West of Ireland calls urgently for remedy; we agree on the broad lines of the remedy; we disagree regarding certain principles and administrative methods which the application of the remedy involves. I am sorry that there should be disagreement, but its existence imposes on me the obligation of frankly re-stating my reasons for the opinions I hold.

I object more or less to sixteen out of the fifty-two "Conclusions and Recommendations" summarised in Section XLVI. of the Report; but instead of setting forth a bald catalogue of objections, I shall endeavour to present them in a connected form under the following heads:—

I. The necessity for a definition of "congestion."

II. The most suitable agency for the relief of congestion.

III. If a Congested Districts Board be retained—

(*a*) How it should be composed, and what powers it should exercise;

(*b*) In what area it should operate, and what should be its relations with the Estates Commissioners;

(*c*) How land should be acquired for it.

IV. The principles on which the price of land should be fixed.

V. A summary of the organic and other changes necessary for the better relief of congestion.

I shall follow the order of these heads, working into my argument the criticisms I have to offer on other points, and the proposals I have to make on the general subject.

Section I.—The Necessity for a Definition of "Congestion."

2. The Congested Districts Board for Ireland was established under the provisions of Section 34 of the Purchase of Land (Ireland) Act, 1891, which described "congestion" in the following terms:—

> "Where more than twenty per cent. of the population of a county live in electoral divisions of which the total rateable value, when divided by the number of the population, gives a sum of less than one pound ten shillings for each individual, those divisions shall (for the purposes of the Act) form a separate county, in the Act referred to as a congested districts county."

Thus "congestion" may be defined as a condition of poverty produced by the concentration, within a limited area or on inferior soil, of a relatively dense population. This conception of "congestion" has underlain all Parliamentary legislation on the subject, and all exercise of jurisdiction and executive action by the Congested Districts Board since its creation.

3. It is now proposed by the majority of the Commission (1) to dispense with any definition of "congestion" and to abolish the limitations imposed on the Board's activity by Section 36 of the Act of 1891; (2) to schedule the whole Province of Connaught, with the counties of Donegal, Clare, Kerry, and the four western Unions of Cork, as subject to the jurisdiction of a remodelled Congested Districts Board; and (3) to exclude the Estates

Commissioners from operating within the area so scheduled, except when specially permitted to do so by the new Congested Districts Board. With (2) and (3) of this proposal I will deal later on: here I restrict myself to (1).

4. I agree with my colleagues in regarding as unsatisfactory the description of congestion given in the Act of 1891, but I consider it very unwise to dispense altogether with the definition and to confer on the Congested Districts Board, or other Authority which Parliament may charge with the relief of congestion unqualified discretion to spend its funds where and how it likes, within the scheduled area. The cost of relieving congestion must be, in any case, very great, and the results of ill-directed expenditure may be very demoralizing to the people. For these reasons alone expenditure should follow well-considered lines, and should be restricted to defined or definable areas. I should hesitate to entrust the power here claimed to a Department of the State: still less am I disposed to entrust it to a Board working under no Parliamentary control and dealing with funds not its own. Therefore, I would retain a definition, but would state it in precise terms, and limit remedial action to those estates which comply with it.

5. As a description of congestion, Section 36 of the Act of 1891 seems to me at once too narrow and too wide. It is too narrow because the population test as applied by the section excludes thousands of estates which are badly congested and urgently need relief. It is too wide because it allows the Congested Districts Board to spend the funds allotted for the relief of congestion on estates where no congestion exists, provided they are within the scheduled area. In order to secure economy and efficiency of expenditure on the one hand, and on the other hand to extend relief to all localities really needing it, an improved definition of congestion is required.

6. The definition which I propose is a modification of that given in Section 6 (5) of the Irish Land Act of 1903. Abandoning the population test and substituting the estate for the electoral division as the territorial unit, I would define an estate as congested when

(*a*) not less than one-fourth of its area, excluding mountain and bog-land in the owner's occupation, consists of holdings of a rateable value not exceeding £10, or

(*b*) not less than one-fourth of its area excluding mountain and bog-land is held in rundale or intermixed plots;

provided that one or more townlands of an estate in which a numerical majority of the holdings are on the average under £10 valuation, or are held in rundale or intermixed plots, may be regarded as a separate estate and congested.

7. It will be noticed that this suggested definition differs from that given in the Act of 1903 in three particulars. First, it raises the limit of valuation for congested holdings from £5 to £10; next, it excludes mountain or bog land, the valuation being a better criterion; thirdly, it precludes, through the proviso, the existence on the estate of a "grass ranch" or other "enriching area" from affecting the qualifying valuation, while it gives the authority charged with relieving congestion the necessary discretion to deal with parts of an estate. Thus an interpretation is placed on the term "congestion" which, if from one point of view favourable to the tenant, is from another point of view prohibitive of unnecessary expenditure on estates not needing it. The result should make for efficiency and economy.

It is recommended that the amended definition of congestion be of general application, in other words, that it should govern the action both of the Estates Commissioners in non-scheduled areas and of the Congested Districts Board (if the Board be retained) in scheduled areas, and that no irrecoverable expenditure of public money be made on any estate whose circumstances do not comply with the definition. If this, or something like it, is not done, we shall have the authority charged with the relief of congestion interfering where interference is not wanted—to the indefinite prolongation of these relief operations, the waste of public money, the perpetuation of political and agrarian agitation, and the sapping of the self-reliant spirit of the people.

SECTION II.—THE MOST SUITABLE AGENCY FOR THE RELIEF OF CONGESTION.

8. The problem of congestion in the West as presented in the Report is of great magnitude. The estimates given in paragraphs 111-113 of the Report (which are probably as near the truth as any that can be made) state that within the area proposed to be scheduled as under the Congested Districts Board's exclusive jurisdiction there are some 80,000 holdings under £10 valuation which must be bought and improved, while several thousand holdings over £10 valuation will also need improvement before re-sale to the tenant-purchasers. It will take at least ten millions sterling to purchase those holdings (putting the price at 20 years' purchase of the valuation); and purchase is an indispensable preliminary to enlargement or improvement.

9. For the enlargement of those congested holdings the Report states that grass land of an annual valuation of £450,000 (which I estimate would cost 12½ millions sterling at 28 years' purchase of the valuation) will be needed. Therefore the price of the fee-simple of the 80,000 holdings which must be enlarged or improved, of the land needed for the enlargement of them, and of the holdings above £10 valuation which require improvement may be estimated at 22½ millions; while if allowance be made for the purchase of tenants' interests, &c. (which is an essential step in the process of improvement and migration) the price will probably not be less than 24 millions. This great sum represents the cost of the raw material which the Authority charged with the relief of congestion has to work up into the manufactured product of economic holdings.

In this process large losses must be incurred. The Report (par. 308) estimates these losses at not less than 13 per cent. on the price of the land or something over 3 millions sterling. To this must be added the cost of establishments and the expenditure disbursed through Parish Committees which are shown in the Report at about 2¼ millions, making a total of 5¼ millions. The sum of more than 29 millions is thus reached, and as the Report contemplates the improvement of the uneconomic holdings (and they are many) already sold under the Land Purchase Acts, the total may be put at not less that 30 millions. This expenditure is on land alone.

10. I take no exception to these estimates except on one point. Assuming that the Board's methods of dealing with the problem of congestion remain unchanged, the percentage of loss on the land purchase and improvement operations is, I fear, under-estimated in the discussion in Section XLIII. of the Report. In his paper, printed on page 42 of the Appendix to our 11th Report, the Board's Chief Land Inspector, Mr. Doran, satisfactorily shows, I think, that "migration cannot be safely carried out at a less loss than 30 per cent. on the price of the land," and also that the general average loss on the creation of new holdings and the improvement of the old ones cannot be safely taken at a lower rate than 15 per cent. on the price of the land. Indeed, my doubt is whether, on Mr. Doran's figures, 15 per cent. is not too low an average.

If this policy of migration is to be effectively carried out, new holdings must be found for *at least* 20,000 families out of the 80,000 who are congested. A loss of 30 per cent. on the price of 20,000 holdings carved out of grass lands (average valuation per holding £15, and average number of years' purchase 28 years) will be about 2½ millions sterling, or £125 per holding. An average loss of even 12 per cent. on the remaining 60,000 holdings, with the balance of untenanted land which has to be bought, will reach another 2 millions sterling, thus giving 4½ millions as the irrecoverable loss on the land improvement operations connected with the 80,000 congested holdings of under £10 valuation. But several thousand holdings above that valuation have also to be improved, the cost of which, together with the cost of Parish Committees, and of establishments for a period of 23 years (over which the Board's operations are to last, according to the general tenor of the Report) will reach at least 2½ millions sterling (see par. 295). Therefore, assuming that the procedure of the Board for relieving congestion

remains substantially unchanged, the total irrecoverable loss would be 7 millions sterling; and this I think a more accurate estimate than that which may be inferred from the tenor of the Report which, however, does not commit itself to any precise figure.

To this great work of relieving congestion the Report proposes to place under the Board's general control the work of transferring from proprietors to tenants, under the Land Purchase Acts, all non-congested estates in these nine western counties, with, of course, all non-congested holdings in congested estates (unless it allows the Estates Commissioners to effect the transfer of estates that call for no treatment); and it recommends that these enormous operations, involving an expenditure of between forty and fifty millions of money, should be entrusted to an independent Board of 20 members, 9 of whom are to be elected by the County Councils of the nine administrative counties now containing scheduled districts; 3 are to be stipendiary members charged respectively with the conduct of business in the Land, Fisheries, and Industries Departments of the Board; 4 are to be *ex-officio* members; and 4 are to be nominated by the Crown.

11. From this proposal I dissent for the following reasons :—

Wherever history records a peaceful transfer of land on a great scale from owner to occupier, financed by State funds, that transfer has been invariably effected by State agency. There is no instance on record, so far as I know, where such a task has been entrusted to a Body independent of State control. A voluntary Body may be most usefully employed on the philanthropic side of such an undertaking, but not in determining the conditions of the transfer. And if I am met with the statement that the Congested Districts Board has already negotiated for the purchase of nearly two millions worth of land, my answer is that the process has been tentative, the negotiations have been laborious and slow, while such measure of success as has attended them is largely due to the fact that the Board has been, in this connection, wisely responsive to official guidance. But who will prophesy similar responsiveness of a semi-elective independent Board?

12. The relief of congestion is, in my opinion, the most difficult administrative problem of the time in Ireland. A permanent and radical solution of that problem is only to be found in a policy of State aided emigration to the Colonies, or in a policy of migration, which means removing people from congested districts to new holdings carved out of untenanted land bought for the purpose, and distributing the holdings thus left vacant among their former neighbours.

The first alternative is a counsel of despair. In the second alternative only, according to the Report, is salvation for the congested districts to be found. I agree; but at the same time I point out that the policy of migration has received, and will no doubt continue to receive, the strenuous opposition of the sons of tenant farmers and other landless men living in the neighbourhood of the untenanted land which it is proposed that migrants shall occupy. The Government must, I submit, decide *in limine* on the answer to this crucial question, whether in the general interests of the country it is better to reserve for migrants from congested districts those portions of the grass lands of Connaught which are not wanted for the enlargement of congested holdings in the immediate neighbourhood of these grass lands, or whether it is better to distribute that surplus among the local landless men.

The Government may of course abstain from coming to a definite decision upon this question. It may trust to the tact and adroitness of its agents in reconciling opposing claims and may wait upon events. For a waiting policy of this kind a good deal might, no doubt, be said if we could take our own time and choose our opportunities, but no permanent relief of congestion—indeed I venture to say no substantial temporary relief in a vast number of cases—is to be found in temporizing measures. If therefore the problem of congestion is to be dealt with in earnest an immediate decision must be come to on the question above stated.

It is not by fostering Cottage Industries or by increasing the productiveness of small holdings, or by improving the dwellings of the people, beneficial though all these be, that we shall remove the permanent causes of impoverish-

ment in congested districts; for Cottage Industries are beaten out of the field by foreign competition; intensive cultivation finds its limit in the inexorable law of diminishing returns; and improvements in the home are not maintained, or continued in an atmosphere of poverty. The causes of congestion lie deeper than these palliatives can reach; they lie in the prevalence of holdings on which a family cannot live—"uneconomic holdings" as they are called; in the right of sub-division which tenants practice; in the freedom with which they mortgage their holdings; in the defective character of Primary Education; and in the *inertia* and moral languor which these closely allied causes produce.

13. While the best hopes of relieving congestion lie in the policy of migration it is certain that the execution of the policy is beset with difficulties. The people living near the grass lands claim them as their and their children's patrimony, and resent the intrusion of strangers; the people to be migrated are suspicious and hard to move; the process of settlement calls for very deliberate action* regarding the choice of the land to be brought under tillage, the selection of migrants, and the conditions of their settlement in their new homes; finally, the policy should be pursued firmly and persistently with due and even preferential regard for the claims of the tenants occupying uneconomic holdings near the grass lands. I cannot agree with my colleagues in thinking it in the least likely that such an undertaking can be carried to a successful end with expedition and economy by an independent semi-elective Board composed of heterogeneous elements and subject to political and local pressure of all kinds.

If migration be the real remedy for congestion, and if there be, as there certainly is, an acute conflict between the claims for land of local "landless" men and of "congests" to be migrated from a distance, it follows as a necessary consequence that it is not a popular Board which should be entrusted with the work. For local feeling will be in favour of the local "landless" men, and the elected members of the Board must necessarily reflect the feelings and opinions of their constituents.† In these circumstances the policy which the Report recommends could only be carried out by the nominated members disregarding the opinion of the elected members, and thereby coming into collision with popular opinion in every district in which migrants were being settled. The advantages claimed by the Report for a Board with an elective element would then disappear, while the Board would remain bereft of the authority attaching to a Government Department.

I agree with the Report in thinking that the larger the area over which migration is practised the more effective it will be. The Province of Connaught is a better area to operate in than the districts now scheduled, and all Ireland is better than Connaught. Therefore the body which can migrate "congests" to any part of Ireland is better suited for the work than the Body with more limited scope of action. Last March the Estates Commissioners settled a very threatening agrarian disturbance in County Galway by quickly arranging to migrate some large tenants to Leinster, thereby making their Galway farms available for the enlargement of small holdings there. If the district had been under the present or proposed Congested Districts Board, the operation, if possible at all, could not have been done without numberless embarrassments and delays. For these reasons I submit that the Estates Commissioners are alone competent to treat migration on broad lines; they alone are capable of drawing on all Ireland for the untenanted land needed to redress the balance of the West. Moreover it is by entrusting the work to

* The Report (page 113) recommends that "on an average it would be necessary for the Board to hold an estate for two years." The inference from Section 72 (2) of the Act of 1903 is that the Board may not keep an estate before re-sale for more than five years. I would leave five years as the maximum limit and look for a three years' average. In new holdings a four years' average might be better.

† The chairman of the Roscommon County Council, speaking at Elphin on 9th April in prophecy of the character of our Report, is stated to have used the following significant words:—"This Body (the new C. D. Board) will have on it one member elected by each County Council, who will know how to look after the people of his own county . . . There is no need of saying that the people of one parish must get all the land in that parish." How conducive to impartial and effective administration it would be to have a Board, with all but half its members animated by these sentiments!

them that we shall best avoid that "fining down" of tenancies (which the Report recommends), to a valuation of £100, whereby the "strong farmer" class, to whom their smaller neighbours should look up for lessons in progressive agriculture and the amenities of life, would suffer, the market for labour would be diminished, the greed of land stimulated beyond measure, and the countryside reduced to one dead level of small occupants, selfish and ignorant.

I am in favour of acquiring, for the relief of congestion, so much of the "ranches" and grazing farms, no matter by whom held, as is not "fattening" land; I would not exempt nominal farmers whose real livelihood comes from other sources than the land; but I am very doubtful about the expediency of "fining down" true agricultural tenancies. To the "fining down" of "residential" farms, no matter of what size, I am opposed; while I regard the "fining down" of holdings bought under the Land Purchase Acts as destructive of confidence in Government, and calculated to demoralize the people, not only of the congested districts but of all Ireland.

14. Whatever agency we employ for the relief of congestion must, if the work is to be done with expedition, be invested with much larger powers than the law at present confers on the Congested Districts Board. The power of compulsorily purchasing congested estates, and the grass lands required for the relief of congestion in them—I do not go beyond this—is essential not only in the Western Counties, to which the Report would limit the power, but wherever throughout Ireland congestion is to be found. As between two bodies, both engaged on the relief of congestion, it is, in my opinion, truly illogical and unreasonable to propose, as the Report does, to grant the power of compulsorily acquiring land to the Congested Districts Board which is independent of Parliamentary control, and to refuse it to the Estates Commissioners, a great State Department completely subject to such control. The Report (par. 320) says that the evidence given has not satisfied the Commissioners that compulsory powers, while necessary for the Congested Districts Board, are wanted to enable the Estates Commissioners to relieve congestion. But as a matter of fact two of the Estates Commissioners have told us that they did require such powers for the relief of congestion, and I can find on the record no evidence to the contrary. Moreover, it is the fact that generally throughout Ulster, wherever congestion exists, the untenanted land is so scant that without compulsory powers it would be impossible to relieve congestion there. This conclusion is confirmed by the experience of the Estates Commissioners in working the Evicted Tenants Act.

15. When congested property is bought it is essential that full power to re-arrange the holdings, to improve them, and to transfer tenants from old buildings to new ones shall be conferred upon the appointed agency. These powers involve interference in a far-reaching way with private rights and legal relations. On which of the two agencies—the Estates Commissioners or this large semi-elective independent Board—is it expedient to confer them? It would be a new departure in constitutional government, as well as a leap in the dark administratively, to confer them on the Board; but the Estates Commissioners, whom experience has shown to be capable of administering such powers with prudence and success, may be properly, and, according to precedent, invested with them.

But these are not the only powers which would have to be conferred on the Board if effect were given to the scheme of the Report. It would also be necessary to confer on it the judicial and executive powers which the Estates Commissioners now possess in connection with the purchase of Estates, re-sale of holdings, and decisions on all questions of law and fact that daily arise during that operation. No one, however, will contend that such powers could be entrusted to an independent semi-elective Board not sitting continuously but with considerable intervals. And if it be contended that the exercise of the powers might be delegated to one or more of the members of the Board I point out that by such a delegation these members, as exercising judicial functions, would become independent of the Board which itself is to be independent of Parliamentary control. In fact, we should arrive at a dictatorship of a more pronounced type than the most autocratic Government Department.

16. For reasons which I shall state in due place, I hold that a nominated Board of moderate size is a far more efficient agent for relieving congestion than the large semi-elective Board proposed in the Report. But here I wish to consider what inferences may be drawn from our experience of the working of the existing Board. One of the reasons why this Commission was appointed is the insignificant impression hitherto made on the problem of congestion by the operations of the Congested Districts Board which have extended over 17 years. These operations may be classified under five heads :— Agriculture, Industries, Public Works, Fisheries and Land Improvement. Under Agriculture some good work has been done in improving the breed of cattle, but in no other direction is any permanent good result to be traced. Under Industries a few factories have been subsidised, like those at Foxford and Annagry, and the support given to Cottage Industries has increased the family receipts to some extent. But Foxford excepted, I doubt if any of these undertakings possess the stamp of permanency, and even Foxford is doubtful. The sum spent on piers and roads has been well spent, and excellent work of a permanent kind has been done under the head of Fisheries and its subsidiary industries of boat-building, barrel-making, net-mending, and fish-curing. The pity is that more money could not have been devoted to this branch of work, and a more courageous policy pursued. The Land, however, has, at all events for the last ten years, been the chief object of the Board's solicitude, and what the Board has here to show is some excellent work of a sanitary kind done by the Board itself and by Parish Committees (the latter spending £52,000) and 6,965 holdings (bought for £667,716) re-sold to tenants after improvement. The results of the Parish Committees' work will be permanent or not according as the holdings on which it has been done provide their owners with the means of decent living. But by far the larger number of the holdings that have been re-sold to tenants remain uneconomic, and there is disillusionment in the reflexion that this perpetuation of congestion destroys the hope of ultimate permanent improvement.

I admit in the fullest way that the Board has been a benefactor to thousands of poor tenants whose small holdings it has improved, if it has not enlarged them ; whose homes it has made brighter and more sanitary, and whose incomes it has increased through Cottage Industries. But it is not by these means, beneficent though they be in their degrees, that the congestion of the West is to be permanently relieved. When all is said that can be, and should be, said in praise, the stubborn fact remains that (to quote the words of the Board's Chief Land Inspector, Mr. Doran) "the Board has only kept on toying with the problem."

17. The truth is that up to the purchase of the Dillon Estate in 1899, the work of the Board was that of the pioneer and the philanthropist. That purchase began a new chapter in the Board's record, and for the next few years its energies were directed to improving that sadly neglected property, The Board did not proceed by migration (although one of its early resolutions showed its appreciation of that remedy), but by improving holdings without, as a rule, enlarging them. To Mr. Wyndham must be given the credit of clearly enunciating the truer principle when, on introducing the Bill which became the Act of 1903, he asked for a credit for the purchase of untenanted land : "That", he said, "will add to the working capital of the Congested Districts Board who abandoning a policy of buying a few estates here and there and trying to sell them as quickly as possible, will adopt a policy whereby a number of estates will be bought, the tenants being expected to do something to work out their own salvation."

This principle of purchasing untenanted land, as the true basis for relieving congestion, has since then been kept steadily in view by the Board. But it soon became apparent that the pursuance of that policy—the only sane policy if congestion is not to be perpetuated—postulated the grant to the Board of much larger funds for expenditure in improvement and migration than it controlled. So far back as 1905, attention was called to the matter, and the Government was warned that the Board could not fulfil the expectations created by the Irish Land Act of 1903, if larger funds were not provided for it. These warnings combined with the public appreciation of the smallness of the results which the Board had achieved compared with the magnitude of its task, led to the appointment of this

Royal Commission, and the Board's present condition of impecuniosity is due to the fact that the Commission was unable to report a year earlier than it has done.

With larger funds, better organization, and more efficient establishments, the Board can do a higher quality of work and can greatly improve on the past rate of progress. But knowing as I do the strength and weaknesses of the Board (points which, I venture to say, are not adequately disclosed in the evidence or in the Report) I feel certain that without altogether changing its character and bringing it nearer the type of a Government Department, the Board cannot be made capable of increasing its past out-turn of work much more than three-fold. But even with such a great advance in efficiency, the Board would still take more than a generation to solve the problem of congestion within the larger area proposed to be scheduled.

18. If then the solution of the problem is not to be expected within any shorter period, even from a fully efficient Board, the question arises—can the Estates Commissioners working alone or reinforced be trusted to effect the desired solution more speedily. My answer is that they can. Consider what work the Estates Commissioners have done under the Act of 1903. Excluding from notice direct sales between landlords and tenants (whereby the ownership of 15½ millions worth of property, held by 34,465 tenants, has been transferred), the Estates Commissioners have within four years bought (under Sections 6, 7, and 8 of the Act), 300,276 acres of land at a gross cost of £2,914,321. Within the same period they have re-sold to the tenants (and vested in them) 203,781 acres of that land valued at £2,224,413, having spent £69,696 on improvements. During these operations they have created 644 new holdings and enlarged 2,822 old ones.

19. The Congested Districts Board, since 1896 when it was empowered to buy land, has bought 460,702 acres of land, for which it has paid or agreed to pay £1,947,621. During the same period it has re-sold to the tenants (but not vested in all) 171,452 acres for £766,403, having spent £183,000 on improving them. During the process of improvement, 448 new holdings were created and 1,473 old holdings were enlarged.

This comparison, on its face, is unfavourable to the Congested Districts Board, the out-turn of work (under Sections 6–8 of the Act of 1903) by the Estates Commissioners in four years being much greater than that of the Congested Districts Board in more than double the time. But I agree with paragraph 99 of the Report that the work of the two bodies does not admit of close comparison, because the Board had to deal with a much poorer population and much worse land. Still the comparison is useful as pointing to an essential difference between the principles and methods of working adopted by each body.

I admit that the congested districts require special treatment, but nevertheless I think the Congested Districts Board's methods of relieving congestion are of a slower, more laborious, more minute and more eleemosynary character than seem really necessary in an undertaking of this great magnitude. Having seen the work of the Estates Commissioners and of the Congested Districts Board, I have formed the impression that the tenants on the Board's estates have not been made to "work out their own salvation" to the extent that was good for them; and that the Estates Commissioners, while giving the people all the assistance they really required, have been more successful in inspiring a spirit of self-reliance and of self-help. We have it on the authority of trustworthy and competent witnesses, who have seen the two bodies operating in the same neighbourhood, that they prefer the methods of the Estates Commissioners to those of the Congested Districts Board, though the evidence, especially the clerical evidence (mostly from districts in which the Estates Commissioners have not operated) is generally in favour of the Board. But the problem of relieving congestion is so enormous, its cost so great, and the necessity of building up self-reliance of character in these congested districts is so imperative, that it seems to me the better course not to do so much for the "congested" tenant as the Board does, but to rough-hew the holding for him and to leave to him and his family, with some money-help, the task of shaping it to their own ends. Spoon-feeding can be carried too far.

For all these reasons I maintain that, to carry through this great policy of Land Improvement and Migration with success, expedition, and economy, it is not a semi-elective independent Board that is wanted, but a thoroughly efficient State Department; and, in my opinion, such a Department is ready to our hands in the Estates Commissioners.

In view of what is said in paragraph 100 of the Report, who can doubt that if the Irish Councils Bill had become law this conclusion would have been adopted by my colleagues? I am loath to think that the ill-starred rejection of that measure may have one more unfortunate result in the postponement for years of the final relief of congestion in the West.

20. The preceding considerations lead me to the following conclusions:—

First: It is essential that the solution of the problem of congestion should be attained as soon as possible.

Second: If a Board be retained, the solution of the problem will be postponed for a lengthened period—at least a generation. The delay will be all the greater if the Board be large and elective, because of the comparative inefficiency of a larger Board.

Third: The Estates Commissioners are already doing the kind of work required in the congested districts with marked success, expedition, and economy: If they were substituted for the Congested Districts Board they would finish the work in much less time than the Board would be likely to take.

21. The Estates Commissioners have now acquired an experience in purchasing land, arranging holdings, migrating tenants, and disposing of all questions arising in connection therewith which makes them peculiarly fitted for this great work of the resettlement of the congested districts. It might be necessary to create in their Department a section devoted to the relief of congestion alone, the staff and funds now controlled by the Congested Districts Board being transferred to it.

The Estates Commissioners' organization for this work would probably cost much less than the organization of the remodelled Board. The cost of the Land Staff of the Congested Districts Board is about £25,000 a year at present; under the proposed Board it would become £66,000 (see par. 295 of the Report.) The cost of the entire out-door staff of the Estates Commissioners employed on estates purchased under Sections 6, 7 and 8 of the Act of 1903 averages £10,750 per annum since 1903. In truth the ultimate cost of the whole policy of relieving congestion in the West will depend largely on the agency employed. The cost will be less if the agency be that of the Estates Commissioners, and more if it be that of a Board.

Section III. (*a*).—If a Board is to be Retained, its Composition and Powers.

22. If Parliament is not prepared to abolish the Congested Districts Board at once and to transfer its functions and establishments to the Estates Commissioners, then the question arises—should the Board be maintained on its present lines, or should the very differently constituted Board proposed by the Report be established? To that question, I reply unhesitatingly that the Board should be maintained on the present lines, a Stipendiary Member, whose whole time should be given to the Board's work being substituted for one of the present members; that it should be no larger than it now is (eleven members); and that it should be composed, as at present, of *ex-officio* and nominated members. I agree with my colleagues in thinking that the present members should vacate their seats and that the Board should be recruited anew.

In selecting members of the Board, the aim should be to secure the services of men of business habits, sympathetic temperament, and prudent judgment, *who would look on the problem of congestion as a whole, and whose impartiality would be proof against mere local considerations or local pressure.* I am not insensible to the advantages of having on the Board gentlemen possessed of local experience. There are on the existing Board no more useful members than the Most Rev. the Bishop of Raphoe, and the Rev. Denis O'Hara, whose local experience and influence have been invaluable.

But it will be as easy in the future as in the past to nominate to the Board members who reside in the congested districts, and combine local knowledge and experience with the essential qualifications I have described above—qualifications which would, I venture to say, be possessed by elected members only in very exceptional cases.

23. Local knowledge and experience are of two kinds—general and particular. It is the former kind that is wanted on the Board. Information regarding particular localities and individuals is best supplied by the Board's own officials and by associating with the Board the Local Government agencies which already exist, and may be expanded.

I consider it most important that the County Committees under the Agriculture and Technical Instruction Act, 1899, should be brought into closer touch and co-operation with the Congested Districts Board. On this point I am in entire agreement with the various witnesses who have recommended the creation of advisory sub-committees in the congested counties, and I think that the Agriculture and Technical Instruction Act, 1899, should be amended so as to permit of the establishment of such sub-committees in rural districts or even smaller areas for general administrative purposes, such as the relief of congestion, the management of woods, and the control of turbary, and sporting rights, under the Land Purchase Acts; not to mention other branches of the Administration not cognate to the present enquiry. If these sub-committees were created we should have in the county organisations the fullest means of securing to the Congested Districts Board not only information as to facts and local feeling, but also co-operation in the execution of its plans and in the control of the expenditure of its funds on local improvements. *I am strongly in favour of developing existing constitutional agencies to meet fresh local needs, and strongly against the creation of special agencies ad hoc to meet such needs.*

24. In determining the size of the Board, exclusive attention should be paid to the business-like and systematic transaction of work. A board of moderate size is a far more efficient agency for work than a large board. When a board is of such a size that business can no longer be conducted by conversation but must be carried on by debate, it ceases to be an effective instrument for executive action, because debate causes friction, waste of time, and divisions on party lines, not to mention the introduction of controversial topics.

I shall not be truthfully accused of repugnance to the introduction of the elective principle in its proper place, or of mistrusting the County Councils as an electorate. I am entirely in favour of associating the representatives of the people with the Government in directing and controlling the administration of Irish business; and I believe that the Government of Ireland will remain as unpopular and inefficient, as I know it to be, until this most salutary reform is introduced and the Irish people come gradually to learn how to administer their own affairs. But in the constitution of the Congested Districts Board, created as it has been to remedy a most pressing hardship, the elective principle would be entirely out of place, because it would increase the Board to an unwieldy size, and thereby make it inefficient; would convert it from being an executive into a political and debating body, and would expose it to local pressure of all kinds, not only as regards its policy but as regards its practice and the distribution of funds and patronage. Moreover, in a Board so constituted the elective members would naturally favour the tenant's point of view, and this would lead to pressure being put on the Government to use its power of nomination to establish an equilibrium of opinion. In the result, the Board would become a partizan Board, cease to command confidence, and sink into an arena of acrimonious discussions.

25. The recommendation to create a semi-elective Board is supported on the ground that the Board would thereby be made more effective and its policy more acceptable to the people generally. But to men of sense and shrewdness, as my countrymen are when their heads are not filled with wind, the popularity and effectiveness of the Board will be best guaranteed by the method which secures prudence, impartiality, and detachment from local prejudices at Head Quarters, and close association in the districts with the

various bodies concerned with the work of local government. Such a method is surely far preferable to a plan which creates at Head Quarters a Board of conflicting opinions and divergent interests, and relies for the acceptance of its policy in each district on the uncertain advocacy of one man who may cease to be "popular" when he exhibits moderation, or when the Party which elected him ceases to be dominant. There is, in my judgment, no comparison between the great benefits which the Board can reap from the co-operation of the local constitutional bodies properly expanded for the purpose, and the precarious results likely to be secured by the advocacy of an elected member.

26. I recommend that the Board, if retained, remain as at present composed of 11 *ex-officio* and nominated members. The *ex-officio* members, at present three in number (the Chief Secretary, the Under Secretary, and the Vice-President of the Department of Agriculture and Technical Instruction), should be raised to four by the addition of an Estates' Commissioner. The reason is the necessity, admitted by all, of having the Estates Commissioners represented on the Board as the Land Commission was before the passing of Sec. 84 of the Act of 1903. Of the seven nominated members, I think four should be gentlemen usually resident in the congested counties (say, one from Donegal, one from Kerry or Cork, and two from Connaught). Of the other three members, one should be a paid member of the Board chosen, because of his administrative ability. The most striking defect in the Board's organisation at present is the want of driving power and the absence of co-ordination and control over the various branches of its activity in the intervals between the meetings. There is, it is true, provision for the assembling of special meetings, and no Under Secretary to the Lord Lieutenant has ever grudged working overtime daily for the Board. But these arrangements which may have sufficed, when the Board was in its experimental stage are quite inadequate now, and a glance at one of the agenda papers will show what a vast number of small matters are, on each occasion, kept over for the Board's orders. The necessity of dealing with these minor matters at the Board's meetings, diverts attention from more important work and leads to waste of time. The supervision of a paid member would be of infinite benefit in stimulating activity, maintaining efficiency, and co-ordinating activities in the various branches of the work. If a Board is to be retained the Commissioners are agreed as to the essential importance of this improvement. The chief difference is as to whether there should be one paid member, who would correspond to the managing director of a commercial company, or whether there should be three, one for each branch of the Board's work—Land, Fisheries, and Industries.

27. There should, I think, be only one paid member, because one member is sufficient for discharging the functions of direction and control in the intervals of the meetings, and because I am opposed to the continuance, under the Board, of any work except the relief of agricultural congestion. In my opinion the Board should, in future, have nothing to do with industries or fisheries except by arrangement with the Department of Agriculture and Technical Instruction in special cases such as the establishment of fishing villages mentioned in Paragraph 268. It was quite right that the Congested Districts Board should have concerned itself with industries and fisheries while as yet no Department of Agriculture and Technical Instruction had been called into being. But the time has come when the Congested Districts Board should divest itself of functions for the due discharge of which a special Department has been recently created by Parliament. That Department has now passed its novitiate. It has agencies specially designed to deal with these branches of work in the country generally, or agencies which, if not at the present moment completely adapted to the needs of the congested areas, can be readily adjusted to their requirements. To any such adjustment the suggestion to create Sub-Committees under the Agriculture and Technical Instruction Act in rural districts or smaller divisions will powerfully contribute. I think it is bad policy to maintain two agencies for doing the same work. The division of labour provided for in the Act of 1899 should now be carried into practice, and over-lapping of functions should be stopped. The presence on the Congested Districts Board of both the President and Vice-President of the Department of Agriculture will afford ample security

that the interests of the congested counties as regards industries and fisheries will be duly provided for. I may add that, even if it be decided to maintain the Board's control over industries and fisheries within its jurisdiction, I should be still of the opinion that there should be only one stipendiary member for the control and direction of these branches of the Board's work as well as of the business of Land Purchase. The success of the whole plan greatly depends on the choice of the stipendiary member. He should be a man of proved administrative ability, firmness, tact, information, and well experienced in official business.

28. It has been suggested above that additional powers must be conferred on the Congested Districts Board if it is to be retained. For the reasons to be stated presently, *I would give the Board no powers whatsoever of purchasing land* unless in the case of tenants' interests incidental to land improvement and migration, when these interests can be acquired by voluntary negotiations. These transactions are petty transactions involving comparatively small sums. But its power to execute improvements and to re-arrange congested holdings should be increased. At present the powers of the Congested Districts Board to re-arrange and improve congested estates are practically contained in the Congested Districts Board Act of 1901, and long experience has proved how futile they are in practice. If the work of the Board is not to be indefinitely protracted we must run some risk and invest the Board with power to do what it thinks best for the occupants of congested holdings. But as the necessary powers involve radical interference with private rights they ought not to be conferred on the Board without strict safeguards. One safeguard must, as now, take the form of liberty to the tenant to appeal to a Judicial Court against the Board's action, and to receive monetary compensation if his appeal is allowed. Another safeguard might be the retention in some shape or other, and possibly on the application of the parties, of power to Government to supervise the Board's action in this branch of its work.

Section III. (*b*).—In what Area should the Congested Districts Board Operate, and what should be its Relations with the Estates Commissioners.

29. The recommendation made in the Report on this head is that the whole of Connaught, and the counties of Donegal, Clare, Kerry, and the four western Unions of Cork should be scheduled as under the exclusive control of the Congested Districts Board. This recommendation, if accepted, *will bring one-third of Ireland* under the exclusive jurisdiction of the Congested Districts Board; will vastly increase the Board's duties and responsibilities; will widen enormously its opportunities for spending public money; and by converting it into the Authority, under the Act of 1903, for the purchase and transfer of land on a great scale, will radically change its character, and confer upon it powers which no Board of the kind has, so far as I know, ever been entrusted with.

The area within which the Congested Districts Board operates at present (*i.e.*, the congested or scheduled districts) contains 2,986,681 acres, comprised in 84,954 holdings, and having a valuation of £523,188. The valuation per holding, therefore, is about £6 3*s.* 2*d.*

The "additional" area (*i.e.*, the new area which the Report (par. 107) proposes to schedule) contains 3,797,045 acres, comprised in 95,366 holdings, and having a valuation of £1,650,858. The valuation per holding, therefore, is £17 6*s.* 2*d.*

30. These figures demonstrate that while "congestion" is the characteristic mark of the existing scheduled areas, freedom from "congestion" is the characteristic mark of the "additional" areas which it is now proposed to schedule. And this statement, true of the whole "additional" area, is, with the exception of one county, Leitrim, not less true of its constituent parts. The average valuation per holding of the "additional area" in Co. Donegal is £18 (round figures); in Galway, £18; in Mayo, £15; in Roscommon, £18; in Sligo, £17; in Kerry, £17; in Clare, £19; in Cork, £16. Only in Leitrim, where the average valuation of the additional area is £12, is the limit of congestion approached.

31. The reasoning of the majority of my colleagues in support of the proposal to schedule this great area, covering one-third of Ireland, seems to me reducible to the following statement. The greater part of the area in question is either congested or consists of untenanted land needed for the relief of congestion. Therefore the scheme of scheduling an entire province or county as subject to the Board's jurisdiction affords a convenient way of dealing with the problem of congestion as a whole in the West of Ireland—(1) because it brings within the Board's jurisdiction congested estates with which it cannot at present deal; (2) because it is a simple way of defining the area within which the power of compulsorily acquiring land must be exercised; (3) because it extends to the area from which congestion may be relieved the powers which are exercised over the congested estates themselves; and (4) because it facilitates migration by establishing a uniform control throughout the entire scheduled area.

These reasons are more specious than real. In the first place it is manifest that nearly half of the "additional" area is not congested at all. Out of the 95,000 holdings which it contains, only 57,000 are shown as under £10 valuation. Some of these have been, it would seem, already dealt with, and nothing is easier, should Parliament so desire, than by simple enumeration to bring the congested estates in those non-scheduled tracts within the Board's control while excluding estates which are not congested. In the next place the definition of the area within which land should be compulsorily acquired in no way necessitates the scheduling of that area as under the Board's jurisdiction, nor does it facilitate the Board's acquisition of it. The land when acquired passes under the Board's jurisdiction by the operation of the existing law so that scheduling beforehand does not help the subsequent treatment of the land. The third reason would be certainly effective in enabling the Board to spend more money where it cannot do so now; but that is an argument against giving the power. In other respects the proposal would give the Board no powers which it does not at present possess. The fourth reason might have plausibility if the considerations urged in paragraph 13 above did not predominate.

In short, I am unable to accept the proposal because its effect would be to overwhelm the Board with work which it could not discharge; to bring under the Board's control, and make lawful objects of public expenditure thousands of estates which are not congested; to exclude the Estates Commissioners from co-operation in the work of relieving congestion in the West which they are highly competent to execute; and to give to an independent semi-elective body what really amounts to a controlling voice over the administration of the Land Purchase Acts over one-third of Ireland, involving functions which it is entirely unfitted to discharge.

I object to making the misery of the western peasant the occasion for a semi-political experiment which will indefinitely delay his relief.

32. In the area now scheduled under the Act of 1891 there are, we learn, from Mr. Doran, 50,000 congested holdings still untouched by the Congested Districts Board, which must be bought and improved, while some 280,000 acres of untenanted land must be purchased for their betterment. At a rate of progress three times greater than that of the past 10 years, it would take the Congested Districts Board, when brought up to the highest pitch of efficiency on existing lines, some 23 years to remove congestion from these 50,000 holdings. It seems to me that this is a task sufficient to tax the powers of any Board and I would, therefore, keep the Board to the great task of relieving congestion in the area already scheduled as congested under the Act of 1891, or in such additional areas as the Lord Lieutenant for facility of administration may add irrespective of the population test.

33. If from the 80,000 congested holdings stated by the Report to exist in the larger area we deduct the 50,000 congested holdings which according to Mr. Doran are contained in the area already scheduled we find that in the "additional" area which the Report proposes to schedule there exist some 30,000 congested holdings, some exhibiting congestion of a bad type. It is evident that if the relief of this congestion be superimposed upon the task the Board is now engaged on, the completion of that task would be indefinitely delayed. In such circumstances, it would be administrative

folly to reject the co-operation of the Estates Commissioners, and to refuse to employ them in relieving this congestion existing in the "additional" area now proposed to be scheduled. I am the more convinced of the unwisdom of such a refusal when experience has proved that the Estates Commissioners are a very expeditious and effective agency for the relief of congestion.

The real question then for decision is how shall the co-operation of the Estates Commissioners be secured without creating competition or friction with the Congested Districts Board (if it is to be retained) working within its own jurisdiction. It ought not to be beyond the reach of administrative ability to provide rules which will prevent this competition, and secure the necessary co-ordination of effort.

34. I suggest the following rules to that end :—

1. Limitation of the Congested Districts Board's activities to the areas now scheduled as congested under the Act of 1891, or which may hereafter be, or remain, scheduled under powers to be now taken.
2. No estate within the areas so scheduled to be bought or sold under the Land Purchase Acts except for the purposes of or with the consent of the Congested Districts Board. But if the Board delay or refuse its consent in case of a non-congested estate, an appeal to lie to the Lord Lieutenant, whose order shall be final.
3. The Estates Commissioners to be the sole purchasing authority, both within and without the scheduled areas.
4. The Estates Commissioners to buy for the Congested Districts Board, on requisition from them, any estate or land within the scheduled area, or any untenanted land outside the scheduled area needed for the relief of congestion, and to make over the estate or land, when bought, to the Congested Districts Board for subsequent treatment.*
5. The Estates Commissioners to hold for or make over to the Congested Districts Board any untenanted land acquired by the Commissioners in any administrative county containing scheduled districts which is not needed for the relief of congestion in estates purchased by the Commissioners.
6. The functions of the Congested Districts Board to be restricted to the improvement of estates bought on its requisition and their re-sale to the tenants, and to matters ancillary to such improvement.

35. The determining principles of this scheme are :—

(*a*) The necessity of solving this problem of congestion in the West at the earliest possible date.

(*b*) The fact that the relief of congestion in the areas now scheduled is in itself a vast task, and as great as should be imposed upon any board which can be created.

(*c*) The efficiency of the Estates Commissioners as an agency for the purchase of land and for the relief of congestion; and the importance of employing them in this work under conditions which shall preclude overlapping and friction with the Congested Districts Board.

36. In paragraph 17 above I have stated my opinion that, without bringing the Board nearer the type of a Government Department, it cannot be made capable of increasing its out-turn of work more than three-fold or at the very outside four-fold. A thoroughly efficient Board organized on the lines I have indicated, should be capable of holding at one time two millions' worth of land, and of annually re-selling one-fourth or more of it after the necessary improvements and migration of tenants had been effected.

The Board's income from public funds is at present £86,250. Its expenditure on fisheries and industries—branches which should now pass over to the Department of Agriculture—has averaged about £16,000 per annum.† As that

* See proviso to paragraph 49 (iii.) below.

† This is the figure furnished me by the Congested District Board. It has not passed under the criticism of the Commission but its strict accuracy is not material to the argument which here is concerned with procedure only.

sum should be transferred, with the branches of work, to the Department, the Board would be left with £70,250 fixed income. To enable it to deal annually with £500,000 worth of land, in connection with which large migration work must be carried out, a loss of about £75,000 would have to be incurred, to which the Board's present income can only contribute about £11,000. Therefore an addition of £64,000 per annum is required; and as increased establishments will be needed and some provision made for the excellent work now done by Parish Committees, the addition should be fixed at £90,000, or, say, a total of £160,000 per annum. The Board's power of borrowing for improvements from the Board of Works should extend to £150,000 instead of £100,000 as at present, and should be free of the condition now imposed of having to supply from its own funds one-third of the sum it desires to raise on loan.

With the funds thus provided, supplemented by the surplus rents and profits of purchased estates remaining over after the payment of interest on purchase advances, the Board's task *within the districts now scheduled* would be probably completed in 25 years. If the Board showed itself thoroughly efficient, and able to deal with more land in the year, then the scope of its activity might be widened.

The loss to the State would be about four millions sterling on these operations.

If a Board is to be retained, this is the scheme I recommend for adoption.

It would remain for the Estates Commissioners to deal with the 30,000 congested holdings and the holdings which, though not under £10 valuation, yet need improvement in the non-scheduled areas of the West. My recommendation is that a special section should be created in the Estates' Commissioners' office for this purpose, and that a sum of £500,000 should be annually allocated from the Land Purchase fund for the purchase (by compulsion if necessary) of these congested estates. Power to borrow from the Board of Works to the extent of £150,000 should also be granted.

On the *data* given in paragraphs 9–10 above the value of the lands to be dealt with would be under ten millions sterling, and the total irrecoverable loss, including costs of establishments and expenditure on such improvements as Parish Committees deal with, would, under the system followed by the Estates Commissioners, probably be less than two millions sterling.

Section III. (*c*).—How Land should be acquired for the Congested Districts Board.

37. I now pass to the subject of the purchase of land, upon which also I regret to differ from the majority of my colleagues. The difference of opinion affects two parts of the subject, namely, the authority which is to purchase, and the principle on which the price is to be fixed. The majority of the Commission maintain that the Congested Districts Board should be the purchasing authority. I hold that there should be only one agency—the Land Commission—for the purchase of land in Ireland under the Land Purchase Acts. The majority of the Commission maintain that the price of the land to be acquired should be regulated exclusively by the principle of *net income*. I take a different view, holding that the *actual valuation* should be deemed a factor in the price as well as the net income. I shall here deal with the question of agency, reserving the question of price for subsequent treatment.

38. But before dealing with the question of agency, I wish to state my opinion, that in future no congested estate (*i.e.* congested within the meaning of the definition in para. 6 above), should be sold direct by the owner to his tenants. At present congested estates may pass like any other estates under the provisions of Section I. of the Land Purchase Act, 1903. The result is that Congestion is perpetuated. An amendment of the Land Purchase Act is necessary in this connection whereby no congested estate could be sold otherwise than under Sec. 6 of the Act, *i.e.* to the Estates Commissioners.

39. Returning to the question of agency, I recommend that the whole work of Land Purchase for relief of congestion (as well as for transfer of non-congested property from landlord to tenant) should be done by

the Estates Commissioners, and that the Congested Districts Board, if retained, should be confined to the improvement of congested estates when so purchased, and their re-sale to the tenants. The only plausible argument advanced in the Report against this division of labour is that the Authority which improves and re-sells the property should also purchase, otherwise (it is said) such Authority cannot be responsible for the price fixed on re-sale. If this line of argument is to be carried to its logical conclusion, it is not the Congested Districts Board which should purchase or re-sell, but that Branch of the Land Commission which is responsible for collecting the annuities. However that may be, I point out that the argument has no force unless it be contended that the Congested Districts Board could buy land more cheaply than the Estates Commissioners, and that the Board would be embarrassed by the excessive price paid for land by the Estates Commissioners. But the reverse is the fact. It is the Estates Commissioners that buy more cheaply. As a competent witness puts it:—"The landlords prefer to deal with the Congested Districts Board, and the tenants with the Estates Commissioners." The fact of such preference is of itself a conclusive condemnation of the dual system of purchase, and the creation of two standards of value for land of the same quality—each financed by the State—is a patent scandal. The abolition of this dual system of land purchase will at once render possible a very effective and simple method of land purchase throughout the congested districts.

40. The method will be this:—The Congested Districts Board would requisition the Estates Commissioners to purchase certain congested estates situated within the scheduled districts, or untenanted lands within or without them, and on receipt of that requisition the Estates Commissioners would, if the funds allocated to the Congested Districts Board permit, proceed without question to purchase such estates or lands by amicable negotiations with the landlords where possible, and where not possible, by compulsion. The estates bought for the Congested Districts Board shall be placed on a separate roster from those sold under the other provisions of the Land Purchase Acts, and dealt with by the Estates Commissioners and the Land Commission in their order on that roster.

Having bought the estate by amicable negotiation, or if their offer be not accepted, having referred the question of price to the Court of Appeal provided in that behalf, the Estates Commissioners will transfer the property to the Congested Districts Board, which would then proceed to carry out all the operations necessary for improvement before re-sale, and having done so would deposit the sale agreements with the Land Commission for vesting their holdings in the tenants.

Thus a simple procedure for the purchase of land would be established, the changes in the existing law being only such as would give the Estates Commissioners (1) the power to transfer to the Congested Districts Board the property bought for them; and (2) the power compulsorily to acquire land which cannot be purchased by negotiations.

I may add that this procedure would solve the difficulties which my colleagues feel (Report Section XXX.) as to the treatment of agreements to sell and purchase already deposited with the Estates Commissioners in connection with estates situated in the congested districts. In such cases the Estates Commissioners would complete the purchase, and having done so would make over the estate, if congested, or the untenanted land, as the case may be, to the Congested Districts Board for necessary improvement and re-sale to the tenants. If the estate were not congested the Estates Commissioners would finally deal with it themselves, but untenanted land bought by the Estates Commissioners in administrative counties containing scheduled districts and not required by them for the relief of congestion there would be transferred to the Board. In case of direct sales the same procedure would apply with a slight modification of the law enabling the Estates Commissioners before their holdings are vested in the tenants, to make over the estate with agreements to the Congested Districts Board for improvement. The Congested Districts Board before improvement would record the agreement of the tenants to such enhancements of price or alterations of holdings, as the improvements might necessitate.

41. Compare this simple and practical procedure with the complicated and laborious one proposed in the Report. The latter maintains for the purchase of land two distinct bodies, operating under different procedures, worked by different Courts, creating different standards of value and involving fundamental changes in the existing law touching the rights of landlords and tenants, and yet not exclusive even as regards local jurisdiction. The complexity of the proposal stands confessed in the treatment of non-congested estates which the Report suggests. According to that suggestion no landlord of a non-congested estate situated within the Board's jurisdiction is to sell land to his tenants, and no tenant is to agree to buy his holding from his landlord without the previous consent of the Congested Districts Board, which might conceivably make the consent conditional on acceptance by the landlord of the price it thought right to fix. Apparently the same disability is to apply to the Land Judge and even to the Court of Chancery itself. In fine, both landlords and tenants in the scheduled areas, and all public authorities holding or managing land therein, are to be dependent for the exercise of statutory rights on the discretion of the Board, which itself would be independent of Parliament.

42. The majority of my colleagues recommend that when the Board wishes to acquire an estate by amicable agreement with the owner it should base its offer to him on two factors—the assessment as for second term rents, and the owner's "net income." Recognizing that the Board's staff could not, without great expense, be organized to ascertain the first of these factors on a large scale, and wishing, no doubt, to avoid the appearance of the dual standard of valuation which would be created if both the Board and the Land Commission were buying land independently of each other, the Report proposes that, before an offer is made, the second term rents of all holdings in the estate should be estimated by the rent-fixing Department of the Land Commission.

Now, the rent-fixing Department of the Land Commission does not assess the annual value of land except as part of a judicial proceeding for fixing fair rents, and it would be an entirely new departure to make the procedure for fixing fair rents subservient to the purposes of the Congested Districts Board. Without doing so, however, the Land Commission could not be made responsible for the accuracy of the assessments, or rather the estimates, of second term rents which its subordinates might furnish to the Congested Districts Board.

Assuming, however, for the sake of argument that the Land Commission could be properly called upon to undertake the estimating of second term rents for the Congested Districts Board, I point out that it would take the whole of the rent-fixing staff of the Land Commission (25 officers), working for the Board for half the year (as proposed) at their present rate of work (260 cases per annum), to assess second term rents on the land which the Board proposes to deal with in the year. Of the million pounds worth of land with which the Board is to deal in the year we may take the value of the tenanted land at £500,000. The average valuation of the tenanted holdings is about £5 (see Paragraph 113) and if the price is 20 years' purchase of the valuation we find that the £500,000 represents 5,000 holdings. If we assume that fair rents have already been assessed on two-fifths of these there will remain 3,000 holdings on which fair rents have to be fixed. This would take about 23 Assistant Commissioners at the above rate and would leave only 2 Assistant Commissioners to fix fair rents on the untenanted land which would have to be bought. No doubt under the procedure proposed the Assistant Commissioners would be able to proceed more rapidly and fix more fair rents than at present, but even allowing for this it may be doubted whether the whole staff could estimate fair rents within the half-year for the Board's requirements.

Moreover, the Land Commission could not spare the whole of its staff for half the year in the way proposed, and the new men who would have to be appointed and shared with the Board would lack the experience of rent-fixing which the Board's scheme postulates as necessary for the work. The plan could not be carried out without disorganising the work of the Land Commission or frustrating the expectations of the Board. It seems clear to me

that the Board, if maintained as a Purchasing Authority, would have to make its own arrangements for the valuation of the land which it desires to buy.

In my opinion, the creation of two standards of price cannot be avoided so long as the Estates Commissioners are not declared the sole Purchasing Authority.

And it is not only in regard to the first factor—the assessment of rents—that difficulties lie in the way. The second factor, namely, the net income of the vendor, remains to be procured. Many vendors are unable to supply this factor—the Board's recent experience shows that few are able to supply it; others may be unwilling to supply it; and in these cases the scheme makes no provision for procuring it, or, if procured, for testing its accuracy by such a judicial inquiry as the Estates Commissioners are empowered to institute in such cases. It would follow that the Board might have to base its offer of purchase on insufficient or inaccurate data.

43. On the subject of the compulsory acquisition of land the Report proposes that the Court of first instance established for the purpose should base the price on what the Report calls the vendor's "net profit income" as contra-distinguished from "net income." We find from paragraph 167 of the Report that "net profit income" is very different from "net income," *and must be less*; so that the price based on "net profit income" must be less than a price based on "net income." On the principles adopted by the Report, and on the assumption that the price is to be such in the case of voluntary sales as to furnish the vendor with his net income at a certain rate of interest, and in the case of compulsory sales to furnish him only with his net profit income at the same rate of interest, the strange consequences would emerge that the price resulting from compulsory purchase would be less than a price supplied by voluntary sales, and that while a *bonus* would be paid on the higher price resulting from voluntary sale, no bonus would be given on the lower price resulting from compulsory purchase. Two standards of price would, therefore, be established by the divergent results of voluntary and compulsory purchase by the Board, and a third standard of price might be created within the same area if the Board were to permit the Estates Commissioners to co-operate in Land Purchase within the scheduled area. A system involving such conflicting possibilities stands self-condemned.

44. The Report proposes to create for compulsory acquisition of land two Courts, one of First Instance, and one of Appellate Jurisdiction. The Court of First Instance is to be the Legal Assistant Commissioner's Court under the rent-fixing provisions of the Land Acts, assisted by the two assessors. The Appellate Court is to be the Judicial Commissioner's Court.

To the latter Court I should personally have no objection, though I should be prepared to defer to owners' wishes, if expressed, for a numerically stronger Court. But as regards the Court of First Instance, it would, I submit, be preposterous to set aside the Estates Commissioners, who have now (for Ireland) unrivalled experience in the purchase of land, and have been specially charged by the Evicted Tenants Act with its compulsory acquisition, and to impose the duty on an inferior Court which has had no such experience at all.

It seems to me highly probable that the Court of first instance proposed by the Report would please no party, being a mixed tribunal susceptible of criticism from one side as against the Judge and from the other side as against the Assessors.

The only explanation I can give for this anomalous proposal is the strange jealousy of the Estates Commissioners which pervades the atmosphere of the Congested Districts Board. It is, in my opinion, an unreasonable jealousy. The Estates Commissioners appear to me (and no one has had better opportunities of judging their work) to hold the balance between the parties and the taxpayer with scrupulous fairness, and to have done their work with remarkable success.

For reasons of principle and expediency I am opposed to the plan of the Report on this point. I believe it would lead to waste of money, delay, confusion, and inefficiency.

SECTION IV.—PRINCIPLES ON WHICH THE PRICE OF LAND SHOULD BE FIXED.

45. The majority of the Commission recommend that the price of land compulsorily acquired shall be fixed exclusively on the basis of "net profit income" when that can be proved, and when it cannot be proved that the Court adjudicating in cases of compulsory purchase shall have an unfettered and undirected discretion in fixing the price. The effect of this recommendation would be to increase the price to be paid for unencumbered land beyond its present pitch, to lower the price of encumbered estates, and to give more to those who have and less to those who have not.

I submit that while "net income" is an important factor in determining the price which should be paid for land it is only one factor. An equally important factor is the actual value of the land at the time of its acquisition. What the owner is entitled to receive is the full value of his property at the time it is bought, but that value cannot be determined with reference to the past alone and without regard to the present and the future. The stability or precariousness of the net income and the prospects of future rise or fall in value as indicated by existing economic conditions are matters which should be taken into account. When the case is one of acquiring tenanted land no difficulty usually arises. The second term rents or their equivalent indicate the true valuation at the time, and the vendor's receipts and outgoings indicate the net income. The difficulty arises in connection with untenanted land and with the landlord's claim that the net income therefrom in the recent past (excluding times of agrarian disturbance) shall be the basis of price. But the evidence establishes the fact that these grazing rents do not afford *per se* a suitable basis for price, and that it would be unfair to the taxpayer and to the purchasing tenant to accept them as such to the exclusion of other evidence of value. In this case it will be essential to estimate what the fair second term rent of the land would be if let to a solvent tenant, and to make the valuation on that basis a factor in the determination of the price.

Following this principle I suggest that the Court, in fixing the price to be paid either for tenanted land or untenanted land on compulsory acquisition should be directed to fix it with regard to the following considerations:—

1. What the fair rent actually is, or would be, if the land were let to an agricultural tenant.
2. What the landlord's gross income is from the land.
3. Outgoings of all sorts on account of the land.
4. Average rent paid for ten years.
5. Additional allowance (if any) in consideration of the land being in the owner's hands.
6. Compensation (if any) for sporting rights.
7. Price at which land of similar quality in the neighbourhood has been sold voluntarily or by agreement under the Land Purchase Acts.
8. The stable or unstable character of the landlord's income from the land and any other considerations which appear to the Court relevant.

Provided that, in considering points 2, 3, 4, and 8, any period during which the owner's income or outgoings have been substantially prejudiced by illegitimate interference with his land or tenants, should be excluded.

46. If net income be not taken as the exclusive basis for price, the ingenious procedure set out in Section XXV. of the Report will, to some extent, fail of its purpose. But I hope that the part of it indicated in paragraph 194 will be adopted independently of the particular object for which it was devised. It is worthy of adoption on its own merits, because it will produce an income which may be utilized for the general purposes of the Land Purchase Acts, and because it will be a boon to vendors anxious to invest sale proceeds in "gilt-edged" securities with the minimum of expense.

47. My colleagues' preference for "net profit income" as an exclusive basis of price leads them to results which are at once novel, and, I think, unfair to embarrassed landlords. Let me illustrate my meaning by a concrete example:—

A and B are owners of two properties exactly similar in every respect, each property yielding £1,000 a year net income. A's property is unencum-

bered, but B's property is mortgaged for £15,000 at 5 per cent. interest, B thus having a net income of £250 per annum.

The Congested Districts Board desires to purchase both properties, and offers for each twenty-five years' purchase of the net income. A accepts the offer; B refuses it. The Board buys A's property, paying him £28,000 (including the bonus of 12 per cent.), and deciding to acquire B's property compulsorily, refers the case to the tribunal created for that purpose. The tribunal decrees a price which shall—

(*a*) redeem the mortgages; and

(*b*) when invested at 3½ per cent. secure to B an annual income of £250;

in other words, B's property is acquired for £22,500, or £5,500 less than A's property of precisely equal value.

It is true that the tribunal is enabled to give B compensation for his "equity of redemption," but obviously small importance is attached to this power.

This novel procedure is to apply only to owners whose properties are bought by compulsory process; owners who sell under the voluntary provisions of the law are to be exempt from it. But if the procedure be justifiable in the one case, why not apply it in the other? There would be no practical difficulty in applying it to encumbered estates sold by voluntary agreement. Why then differentiate against the man whose need is greatest? The effect of differentiation must be to neutralise *pro tanto* the value of the appeal to the judicial tribunal, and to compel embarrassed owners to accept an inadequate price from the Board rather than incur the risk of greater loss.

Section V.—Summary of Organic Changes Recommended for the Better Relief of Congestion.

48. For the reasons set forth in the preceding paragraphs I recommend that the following changes be made in the law and procedure with a view to the better and more expeditious relief of congestion:—

I. (i.) That the Congested Districts Board be abolished and its functions be transferred—

(*a*) to the Estates Commissioners so far as concerns the purchase, improvement, and re-sale of lands to tenants;

(*b*) to the Department of Agriculture so far as concerns the development of Fisheries and the promotion of Industries, including Technical Instruction. Agricultural business has already been transferred to that Department.

(ii.) That a special section be created under the Estates Commissioners for dealing with the problem of congestion; that the endowments and funds at present controlled by the Congested Districts Board be transferred to such section; and that the staff of the Congested Districts Board be placed under its control.

(iii.) That £1,250,000 of the sum annually raised for Land Purchase in Ireland be ear-marked for the purchase of "congested" estates in the Province of Connaught and the Counties of Donegal, Kerry and the western Unions of County Cork, and of untenanted land needed for the enlargement of congested holdings therein.

(iv.) That out of the endowment of £86,250 at present controlled by the Congested Districts Board the sum of £16,000, which is the average expenditure on Fisheries and Industries, be transferred to the Department of Agriculture; that the balance of £70,250 be increased to £220,000 per annum of which not more than £30,000 to be expended in costs of administration. Also that power to borrow from the Board of Works up to a limit of £250,000 annually for Land Improvement be allowed.

The total irrecoverable expenditure for relief of congestion in the West of Ireland, if entrusted to the Estates Commissioners, would thus, in round figures, be about 4½ millions The time the operation would last would be about 20 years, allowing estates to be kept on hand for an average period of three years.

(v.) That the endowment of the Department of Agriculture and Technical Instruction be increased by a sum of £40,000 per annum for Agricultural, Industrial, and Fishery improvement in the congested counties of the West. Of this amount, £16,000 would be supplied by the existing Congested Districts Board Endowment (par. 36).

(vi.) That Congested estates be saleable only under the provisions of Section 6 of the Land Purchase Act of 1903; and that power of compulsorily purchasing congested estates and untenanted land needed for the relief of congestion in such estates be conferred on the Estates Commissioners.

(vii.) That power to improve congested estates, re-arrange holdings therein, migrate tenants therefrom, and execute such works, whether in or outside congested estates, as may be deemed by them necessary for the improvement of congested estates, be conferred on the Estates Commissioners subject to the tenant's right to appeal to the Civil Bill Court for compensation for injury which is provided in Section 1 (3) (4) and (5) of the Congested Districts Board Act of 1901.

(viii.) That untenanted land situated in the West of Ireland be bought and applied primarily for the relief of congestion. If the grass lands of Connaught are not saved from passing to local landless men, and are not primarily used for the enlargement of local uneconomic holdings and the provision of new holdings for congests, all hope of permanently relieving congestion may be abandoned.

49. II.—If my proposal to abolish the Congested Districts Board be not accepted, then as an alternative course I recommend :—

(i.) That a new Congested Districts Board be created, composed of—

(*a*) Four official members (the Chief Secretary, the Under Secretary, the Vice-President of the Department of Agriculture, and an Estates Commissioner taken in rotation).

(*b*) A Paid Member to be appointed by the Crown, with power to conduct and control the business, as ordered by the Board, in its various branches during the intervals between its meetings, and with full authority, subject to the Board's confirmation, over the Board's establishments. The Paid Member to hold office during the pleasure of the Board.

(*c*) Six members to be appointed by the Crown, of whom a suitable proportion shall have knowledge and experience of one or more of the congested districts. The appointed members to hold office for four years (as the temporary members do now), but to be eligible for re-appointment for another term of four years or any shorter time.

(ii.) That the functions of the Congested Districts Board be restricted to the areas scheduled under the Purchase of Land (Ireland) Act, 1891, and to such further areas as may be scheduled by the Lord Lieutenant under power to be now taken; also to untenanted land bought for them outside such areas; that power be taken to unschedule areas which have been adequately dealt with; and that no estate and no untenanted land within these areas, shall be bought or sold under the Land Purchase Acts except on the requisition or with the consent of the Congested Districts Board. Should the Congested Districts Board unreasonably withhold its consent in respect of a non-congested estate, an appeal shall lie to the Lord Lieutenant, whose order shall be final.

(iii.) That the Congested Districts Board shall not be a purchasing authority under the Land Purchase Acts except in regard of tenants' interests when these are not acquired compulsorily; that all purchases of the fee-simple of land for the Congested Districts Board, whether tenanted or untenanted, and whether by voluntary or compulsory procedure, and all acquisition of tenants' interests by compulsory procedure, shall be made by the Estates Commissioners on the requisition of the Board; and that the land shall, when bought, be vested in the Congested Districts Board for subsequent treatment and re-sale to the tenants. Provided that if any uneconomic holdings exist in the immediate neighbourhood of untenanted land bought

by the Estates Commissioners for the Board outside the scheduled districts, the Estates Commissioners shall retain so much land as is necessary to raise them to the economic standard, and make over the balance to the Board.

(iv.) That the Estates Commissioners shall make over to the Congested Districts Board, for its purposes, any untenanted land acquired by them, otherwise than on requisition of the Board, in the Province of Connaught outside the scheduled districts, which is not needed for the relief of congestion in holdings situated in the immediate neighbourhood of such untenanted land or in congested estates bought by the Estates Commissioners.

(v.) That the functions at present exercised by the Congested Districts Board in regard to Fisheries and Industries be transferred to the Department of Agriculture and Technical Instruction whose endowment should be increased on this account by £40,000 per annum, including £16,000 transferred from the Board's present endowment.

(vi.) That out of the Land Purchase Fund a sum of £500,000 per annum be ear-marked for the purchase of congested estates and untenanted land for the Board; that the Board be empowered to hold land worth £2,000,000 at one time; that the Board's present endowment of £86,250 (less by £16,000 mentioned in the preceding paragraph) be increased to £160,000, of which not more than £40,000 shall be expended on establishments of all kinds; and that the Board be declared competent to borrow £150,000 annually from the Board of Works for the improvement of congested estates purchased by them, provided that no more than £500,000 be outstanding at any time.

On this basis the Congested Districts Board, organised as I propose, might be expected to complete the work within the existing scheduled areas in about 25 years at an irrecoverable expenditure of about four millions sterling.

(vii.) That in substitution for the provisions of the Congested Districts Board (Ireland) Act, 1901, full power be conferred on the Congested Districts Board to alter and re-arrange holdings, to transfer tenants from one holding to another, and to void all intermediate interests on payment of compensation when this is necessary for the relief of congestion. The provisions of Section 1 (3) (4) and (5) of the Act of 1901, giving tenants and others affected by and discontented with the Board's action the right to appeal to the Civil Bill Courts, should be preserved; and the Lord Lieutenant should have the power, on an application by the parties, to assure himself that these powers were being exercised properly by the Board, and to instruct the Board accordingly.

(viii.) That the relief of congestion outside the scheduled districts be effected by the Estates Commissioners who should create in their Department a section for the purpose of dealing with such congestion. That the powers of compulsory purchase and compulsory intervention provided by clause 1 (vi.), (vii.) and (viii.) of paragraph 48 above, be conferred on the Estates Commissioners in regard to congested estates and untenanted land needed for the relief of congestion; and that the obligation to relieve local congestion before migrating "congests" from a distance, and of providing adequately for the latter, before disposing of untenanted land otherwise, be imposed on them. In this connection, my remarks under Clause viii. of the preceding paragraph are strictly applicable.

If in this case also £500,000 out of the Land Purchase Fund in each year were ear-marked for the purchase of congested estates and the untenanted land needed for enlarging holdings and migration, if 15 per cent on the price were allowed for loss, and £20,000 per annum for Establishments and expenditure on such work as Parish Committees do, and if power to borrow for land improvement up to £150,000 annually were granted, with a limit as in paragraph vi. above, the Estates Commissioners may be trusted to complete the work in the non-scheduled areas of the West in less than 20 years. If more money is given for land purchase, the work can be completed sooner. In this case the gross irrecoverable expenditure may be estimated at about 2 millions sterling.

A. P. MacDONNELL.

MEMORANDUM BY SIR JOHN COLOMB.

I have signed the Report because I am in general agreement with its conclusions, but there are three points on which I feel bound to define my position, and, as regards one of them, my inability to agree with my colleagues. The three points in question are

I. The economic effect of breaking up and redistributing grass lands unless such action is strictly limited to the congested area which it is proposed to place under the administration of the Congested Districts Board. Section XX.

II. The nature and constitution of the Courts which it is proposed to create for the settlement of all questions, including price, connected with the compulsory acquisition of land within the congested area. Section XXVI.

III. The nature and extent of the system of Primary Education best calculated to fit the children of the agricultural class for the work which lies before them. Section XXXV., par. 296.

I.—Economic Effects of Breaking up and Redistributing Grass Lands.

The general trend of the evidence and my own personal observations during the tours of the Commission have convinced me that the conditions of some districts visited demand treatment more drastic, and upon a larger scale than any heretofore attempted. In such districts substantial mitigation of evils, there present in acute form, can be accomplished only by judicious alterations in the sizes and arrangements of existing holdings, or, where that is impossible, by the redistribution of their inhabitants over larger areas. Hence, I concur with the recommendation to apply these principles within the limits of the congested districts, and I agree with the necessity of giving the Congested Districts Board adequate powers to obtain land for these particular purposes—*e.g.*, enlarging old holdings and creating new ones for the accommodation of "congests" transplanted. Untenanted lands, naturally, are more suitable for these purposes, because their appropriation would least disturb the rest of the rural population. Such lands, from economic and other causes, are mainly in permanent pasture, and used for maturing or fattening cattle—according to nature of soil—or as sheep farms. The contemplation of acute congestion in places bordering on these considerable tracts has produced a popular sentiment hostile to big pastures and to those who own or graze them : this sentiment in turn prompts a demand for breaking up all such lands into small farms to provide "homes for the people." Unfortunately there has been no official inquiry as to the probable effect upon the general welfare and prosperity of Ireland if such desires were promoted or assisted, on any appreciable scale, by the action of the State.

In the absence of such an authoritative guide, the difficulty of dealing with the questions is great, and the evidence given before us has failed to convince me that, in a purely agricultural country, with a preponderance of small farms, large blocks of pasture may not be an economic necessity. For this reason I desire to dissociate myself from any inference which may be drawn from the terms of Section XX. of this Report, adverse to the existing grazing system generally throughout Ireland, nor could I support, as a State policy, the alteration of breaking up the pasture lands into small holdings—unless such action were strictly limited to the area which is recognised as Congested, and which is subject to conditions quite peculiar to itself.

Where no other method of mitigating acute congestion is possible, the adoption of such a policy is necessary, but the extent to which it can be applied must be determined by reference to the interests of the general

agricultural community. Hence the extreme importance of examining the place of these grazing lands in the economic necessities of Ireland as a whole. Holdings which do not exceed £10 valuation number 275,344, of which 131,316 are in the proposed area of the Congested Districts Board, and 144,028 are scattered through the rest of the country. The total figures represent 56·1 per cent. or more than half the total number of holdings in Ireland.

Thus the question of breaking up the grass lands of Ireland into small holdings has two main aspects :—

1. The probable effect of such a policy upon the interests of the occupiers of small holdings existing whose position in other respects must remain untouched ?

2. What are the prospects of additional new occupiers settled in small holdings on these lands ?

They will be confronted by new conditions consequent upon the disappearance of grazing lands and graziers, and the point at issue really is, how will their interests be affected by the change. It must be noticed that the suggested policy contemplates a state of things without precedent in the chequered economic history of Ireland.

Referring to the conditions prevailing in Ireland under the Brehon Laws, Walpole observes :—" The principal source of wealth and the measure of value . . . . was cattle. The fines were calculated in cows. The cow was the unit of value." Sir W. Petty, some 250 years ago, computed that there were only some 500,000 acres of land under tillage, while some 7,000,000 acres were in pasture. Lecky, referring to the passing of laws (1665-80) prohibiting cattle, sheep and swine, and even butter and cheese to come into England, observes :—" In this way the chief source of Irish prosperity was annihilated at a single blow." Arthur Young, in his " Tour in Ireland, 1776," states :—" A great part of Roscommon, particularly from Athlone to Boyle, thirty miles long and ten broad, is sheep-walk, and lets on an average of 12*s.* an acre. It is generally walk, with only patches of potato and corn for the workmen . . . They have much other cattle with them, such as yearlings, two years old, three years old, &c., selling them four years old to such as want them for fattening." This exactly describes the district as the Commissioners saw it.

The correspondence of Mr. (afterwards Sir Robert) Peel, when Chief Secretary, in the early years of the last century, shows that it was only when corn duties were very high, tenants resorted to tillage, but when lower duties prevailed the graziers were in occupation.

The above references show how continuous has been the history of the Cattle Trade in Ireland in the past. As regards its place to-day in the economic situation of Ireland the late Chancellor of the Exchequer (now Prime Minister) recently described the Cattle Trade " as one of Ireland's most prosperous and necessary industries." This authoritative pronouncement suggests the inquiry why, under existing conditions, the Cattle Trade is necessary to Ireland ? In what way is its prosperity connected with that of the country at large ?

Before examining these questions as affecting the interests of the occupiers of small holdings, the general facts—illustrated by the following tables—need careful study.

The (A) group includes all holdings under £30, but as £10 has been assumed in the evidence and Report to be the dividing line between economic and uneconomic holdings, those under £10 and those between £10 and £30 are distinguished from each other. The next Group, (B) embraces holdings above £30 and not exceeding £100 as fairly representative of economic holdings, while the third (C) accounts for all above £100 valuation, and possibly includes most of the great grass tracts operated by graziers

Outside, ...	46·2	69·4	84·3	85·5
	100·0	100·0	100·0	100·0

The significance of these figures is great, and they may for present purposes be thus summarised.

No. of Holdings.

Nearly half the holdings in Ireland Sub-group A (*a*) are in the proposed area of the Board, while 84 per cent. of the holdings Group C are outside it.

Acreage.

The proposed area of the Board represents one-third of the area of Ireland, about 64 per cent. of the acreage in Sub-group A (*a*) lies within the special area, but only 22 per cent. in Group C lies within it.

Valuation.

Nearly half the valuation of Ireland of holdings Sub-group A (*a*) belongs to the special area, and here again not 16 per cent. of the total aggregate valuation of Irish land of Group C is represented within it.

Population.

Of the total agricultural population occupying holdings in Sub-group A (*a*) 53·8 per cent. is located within the proposed area of the Board, while not 15 per cent. of Group C is located within it. From the above it will be seen how special are the conditions prevailing within the area proposed to assign to the operation of the Board as compared with the rest of Ireland which is about double in extent.

In relation to the question of the danger to the economic equilibrium of any substantial reduction in the amount of pasture land, it may be noticed that the amount of land Group C within the area of the Board is less than one-quarter of the whole. It must also be remembered the land grouped under C and situated within the Board's area probably includes nearly all land described in Section XVIII., paragraph 120, as either unsuitable or necessarily to be exempted from being interfered with by any action of the Board. There are also other physical causes tending to reduce the appropriation of grass lands for purposes of dividing into small holdings, such as distribution of water supplies, and absence of turbary within reasonable distance. It is, therefore, evident that were the full powers of the Board applied in respect of breaking up grass lands within their area, the result could not, to an appreciable extent, affect the Cattle Trade or the grazing system of Ireland. The result would be chiefly local, the probable consequences being prejudicial to the material interests of certain classes of agriculturists in the West, especially the small occupier, for the automatic enhancement of price of grazing, consequent upon the diminution of the amount would increase the value of pastures remaining untouched.

Having now indicated the general features of the economic situation of Ireland, it remains to examine the main features of agricultural operations as far as they can be expressed by figures. The real issue is, the relation of the business of the ordinary farmer to that of the Grazier, and reference to mixed farming is therefore unavoidable. Special information as to cattle and crops, on all agricultural holdings of from five acres upwards, were collected at the request of the Commission, Midsummer, 1907. The facts appear in Tables in Appendix IV. to Eleventh Report grouped in various ways. In order to shorten explanation I have prepared two Diagrams, one relating to cattle, the other to crops.* The figures are taken from the Return referred to, but are grouped as follows :—

See XI., pp. 55-87.

A	Group	(5 to 30	acres)	—	Average	14·3	acre per holding.
B	„	(30 to 100	„)	—	„	47·2	„ „ „
C	„	(above 100	„)	—	„	178·2	„ „ „

The two Diagrams express in form, colour, and to scale, all the information supplied in masses of figures (in Tables in App. IV. Eleventh Report). They show the numbers by classes of cattle and the average appropriated by different classes of crops, &c., in each of the three groups, *i.e.* A, B, and C. The squares represent—according to scale—the proportionate acreage occupied by each group and within each square the figures of cattle and crops appertaining to each Group respectively are shown.

It will be noticed that groups A, B, and C being classified according to acreage, are not comparable with groups A, B, and C (classified by valuation) given earlier in this memorandum. It would be interesting were it possible to compare the two sets of groups, but as the Agricultural Statistics take no account of valuation, and as the statistics classified by valuation take no account of the different crops or classes of cattle, comparison is impossible. The average valuation is about eleven shillings per acre, but the variations in the valuation of different classes of land is too great for it to be safe to make the average valuation a basis of comparison.

Group A, whilst the smallest in area, contains the greatest number of holdings, and the extreme importance of this group in the economic equilibrium of Ireland is plain. It is equally clear that in considering any policy affecting the agricultural interests of this great community, these interests demand primary attention. Any artificial action adopted by the State, or otherwise, which might adversely affect the agricultural prospect of the small farmers in Group A ought to be certainly not encouraged.

Now the striking features of No. 1 diagram are these :—Group A. The great number of cows kept both in proportion to the area on which they are and to the total of all classes of cattle in this group. The number in this group is more than double that on the much larger area C, and on the still greater area covered by B only 6·5 per cent. more of the cows of Ireland are kept than on A. It is not, therefore, surprising that cattle under one year old (calves) are distributed between the three groups in much the same proportions. Of cattle from 1 to 2 years old, the number on A is only about 10 per cent. of the total number in Ireland short of this class to be found on B, and a little more than that on C. In the case of cattle above 2 years old, the facts are most striking. On Group A in comparison with either of the other classes in this group the number is insignificant, being only 14·4 per cent. of the total of this class in Ireland; in Group B about 32·8 per cent., while in C 52·8 per cent. more than half the total number of this class in Ireland.

* See diagrams facing page 186.

The general conclusions to be drawn are, I submit, as follows:—If the area of C were broken up into holdings corresponding to those on A the distribution of number and classes of cattle would not differ much from that on A. The number, of course, would be greater in proportion to relative area, *e.g.*, 36·1 C to 25·3 A. On this basis of computation the accommodation for grazing the 531,067 cattle 2 years old and upwards on C would be reduced, as per proportion of their class on A, to about 200,000. The net total result would be that accommodation for about 330,000 two year olds and upwards would disappear. The evidence of witnesses who advocated the breaking up of the grazing lands of Ireland was, in effect, that in time the system of "intense agriculture" on small holdings would counter-balance loss of grazing. Until, however, the development of a system of "intense agriculture" on farms not exceeding 30 acres entirely changes the position of A and B disclosed by the Diagram, the danger of enforcing or promoting any such policy cannot be ignored.* It is hardly necessary to examine in detail the effects of such a policy on the different classes of cattle in Groups A and B. Special observations are, however, necessary with reference to cows, as affected by crops and tillage, the distribution of which, for 1907, is illustrated in No. 2 Diagram.

The key to the whole problem of the Cattle Trade is the cow. Upon her depends the material prosperity of the occupiers of small holdings. In the classification, the cow and in-calf heifers, are necessarily taken together.

The temperate and humid climate of Ireland favours yield of milk while it promotes the growth of succulent grasses. In this respect Ireland has a conspicuous advantage over Great Britain for dairy business. The adaptation of agricultural operations to natural conditions is the essential condition of their success, and dairying involves the production of calves to the greatest extent possible. It is also the most suitable and profitable form of agriculture applicable to small farms. Unhappily, though agricultural returns give information as to produce of different crops, and also the prices of cattle prevailing in each year, no information is available as to the quantity and value of butter produced in Ireland in the year. It is, however, clear that the output of butter in Groups A, B and C ought, if the milk is not otherwise utilised, to be in proportions to the number of cows in each Group, and, therefore, that the production of butter on farms that do not exceed 30 acres (Group A) may be taken at about 37·7 per cent. of the total output of Ireland.

I have shown that the average size of a holding in this group works out at 14·3 per acre, but for purposes of illustration take it at 15 acres. Now the valuation of Ireland as pointed out in our Report stands to-day at the figures originally fixed by Sir Richard Griffith in 1853. It was a scientific survey and computation of the value of all the land of Ireland at prices then prevailing. The value was determined by the application of formulæ for ascertaining, on a uniform basis, the nature and productivity of the soil, the yield, cost of outgoings necessary for working, &c., &c. The formula for ascertaining the net annual value of a farm of 15 acres of "Dairy Pasture," was given. The estimated gross annual produce was fixed at £58 14*s.* 0*d.*† Expenses of working to be deducted were estimated at

* The late Professor Baldwin, to whom agriculture in Ireland owes much, in evidence before the Richmond Commission said, "My colleague and I went over hundreds of these farms, and during the last fourteen years I have been over thousands of them. Taking a typical case, there is a plot of potatoes, a plot of indifferent oats, and the rest in indifferent pasture or herbage. The herbage often contains more weeds than grass. There is no rotation of crops, and no principle of cropping observed at all."

† N.B.—*Vide* instructions to the Valuers and Surveyors appointed under the 15 and 16 Vic. c. 63, dated 30th July, 1853.

£24, and £34 was left as the net annual produce of 15 statute acres of dairy pasture. The standard of stock on such a farm was taken at six cows, three calves when reared, and three pigs. It was laid down that "the average quantity of butter which a good cow would produce in a year may be taken at $3\frac{1}{4}$ firkins, or allowing nine quarts to the pound of butter the milk will be 1,960 quarts."* By the formula given six cows were estimated to produce in the year 11 cwt. 2 qrs. 19 lbs., besides providing milk for families estimated at £2. The standard price for butter being taken at 6·6*d.* per lb.† Thus the total value of a year's produce per cow in butter and milk was taken at £6 13*s.* 8*d.* The fixation of value of the calves was £9, or £3 per calf, being at the rate of 30*s.* per cow, making the total average estimated gross value of produce per cow £8 3*s.* 8*d.* These standard values only applied to farms of good "Dairy Pasture" and so could not be fairly applied to the average farms of Group A. The annual gross value of the entire produce per cow works out—on Griffith's standard—for Group A as follows :—

Butter (6·6*d.* per lb. and milk for family), .	£3,717,314
Calves, ...	271,222
	£3,988,536

For reasons given above this is probably excessive as really applicable to Group A. On the other hand, the increase of price, even of "congest" butter (1907 as compared with standard butter 1853), is a set-off, representing a total gross annual value of about £735,844. It is noteworthy that the estimated gross produce of cows (in 1906) for A was about equal to the entire valuation of its area. The sum consequent upon the rise of price is equivalent to about one-seventh of that valuation, which was made fifty-five years ago, and not since been altered. By the foregoing method the gross value of young calves works out at about 7 per cent. of the total gross produce from cows.

The above figures taken together show that upon dairy business depends the material prosperity of the people of Group A. Dairying involves a certain amount and quality of tillage, and the more developed and efficient dairy farming becomes, the greater will be the number, and the better the class of calves produced. Obviously a small farm worked as a dairy farm cannot also rear and feed dry stock for long, and so the necessity for a market for that sort of stock must increase. Were the grazing lands of Ireland all divided up into small dairy farms, best adapted to climatic conditions, the market for young dry stock would vanish.

Taking the average prices in 1906, as officially stated,‡ of store cattle one year old at £6 14*s.*, two-year-olds at £9, the value of cattle not exceeding two years old on A may be approximately estimated at £7,681,815, and the value of the dry stock two years old and upwards may be estimated at £1,918,879.

* Note.—The equivalent of 1,960 quarts being 490 gallons it is noticeable that the Secretary of the Irish Agricultural Organisation Society estimated the produce of milk per cow at only 400 gallons. (Q. 21433.)

The late Professor Baldwin's opinion was that an ordinary cow properly treated "produces 600 gallons of milk in the year."

† Note.—The Secretary of the Irish Agricultural Organisation Society stated in evidence that the price of what he called Congest butter was 8*d.*, but informed the Commission that the Creamery at Carndonagh (County Donegal) had obtained at wholesale price 11½*d.* per lb.

‡ *Vide* Return of Prices (Agricultural), Ireland, 1907.

Putting these figures concerning dry stock together, the value and the percentage proportion of value of each class is as follows :—

—	Value.	Per Cent.
	£	
Up to 2 year olds, ...	7,681,815	80·0
Above 2 years, ...	1,918,878	20·0
	9,600,693	100·0

It follows that the average holder of a farm, not exceeding 30 acres, on A must sell dry stock generally under two years old. His only markets are furnished by occupiers of B or C, but as the indications on the diagram show, the power of absorption is infinitely greater in C than in B; moreover C offers the only outlet for the same class of cattle on, and coming on, B. Serious diminution of the power of absorbing cattle now possessed by C must therefore injure the market for A and B. It should be pointed out the occupiers of B are of a different class to those of A, and represent a more advanced agricultural community better able, as a rule, to defend its position as such. With reference to A group it only remains to examine the facts disclosed by No. 2 Diagram in relation to the general assertions made by witnesses, that by "intense agriculture" on holdings not exceeding 30 acres (A) dry stock could be kept on until fit for the butcher, and thus compensate for the disappearance of the great grass lands and the graziers. It is hardly practical to speak of "intense agriculture" on a multitude of farms, chiefly on hill-sides and bog, among the mountains of Kerry and Donegal and other mountainous parts of Ireland, where only spade labour among rocks is possible on their small portions of arable land. On such holdings living and thriving is only possible by sale of butter and of yearlings pushed out by the succeeding calves. It is upon the great grass lands and upon the graziers that these occupiers do, and must, depend. The owners and users of the lands of C as they now exist, are the saviours of the economic interests of A, and in a lesser degree of B. What figures represent the proportions of such hill farms to the whole of those in A we do not know, but the area of the Board includes the larger part of the mountainous districts of Ireland. I, therefore, submit, that any rash treatment of the grazing lands in the plains of Ireland would be specially disastrous to the occupiers in Group A, and to even the "economic holdings" of £10 valuation. Doubtless a very considerable proportion of the holdings on A are farms of good arable land; such farms as the late Mr. Parnell contemplated as suitable for creations of new holdings.* On such a holding "intense cultivation" *if adapted to climatic conditions* is not only possible but extremely desirable. Under such conditions and on such farms, a small proportion of calves born could, and ought to, remain upon them until walked off fat to the butcher? But this would only diminish, not altogether remove, the necessity for an outlet and remunerative market for that larger number of young dry stock which must be parted with unless the calves coming on behind them are killed off.

Expert agricultural witnesses have dwelt upon the economic advantages of "intense agriculture" on small holdings as compared with present dependence upon the grazing tracts and graziers. The loose talk in support of this by others who are not practical farmers, is a remarkable feature of recorded evidence. But the policy of killing calves as opposed to rearing

* Evidence taken by Select Committee (1890) "On Colonization," Q. 5562–5 "land that would be worth £1 an acre as rent" . . . I suppose we should have to give twenty years' purchase of this land under compulsory expropriation. Therefore each holding for land alone would cost £400."

them needs special remark; the question whether the killing of calves for family consumption, or selling them to the butcher for veal—which would glut the veal markets and reduce the price of calves is a good policy, must largely depend on climatic conditions. Where winters are long and severe, housing and in-feeding is imperative, as in countries such as Denmark, the necessity of reducing stock is the death warrant of the younger (except the most promising) animals. But in Ireland with open and mild winters in which young and old dry stock can and do live and thrive outside on the land, the case is wholly different. A policy of killing the calf may be described as killing the goose that lays the Irish small farmer's golden egg, and needs but little labour or cost to keep.

The advantage of "stall feeding" in contradistinction to feeding on grass was pressed upon our attention to illustrate this theory, as applicable to Ireland. I will assume that a holding is carved out of "Superior Finishing Land," that it is broken up and subjected to "intense agriculture," to fatten by stall feeding in preference, as regards profit, to fattening on grass. The cost and labour of this process must be great. Now, it was laid down in the instruction of Sir Richard Griffith to the valuators, that in Ireland "Cattle in good condition will fatten more quickly on this description of land during the early months than under a system of stall feeding." This is a special advantage secured to Ireland by climatic conditions. Is it to be supposed that the occupier of this new farm created for him—with soil of that nature—will, in the early months of the year, prefer to incur the cost and labour of stall feeding rather than to produce the same result without either? It is unhappily the case that agriculture, in the ordinary sense, is not generally understood, and that the land is really misused in parts of Ireland. It is equally true that in other parts the farming is quite exceptionally good. On this subject there has recently been made public the Report of a Commission of Scottish farmers. As the opinion of an independent body of practical men, it may be regarded as impartial. The particular part of the Report is headed "General Farming," and thus runs* :—

> "Ireland is basin-shaped. The mountains round the coast are the rim. The inside is the flat of the basin. It is a large plain, so level that it has been said a stream rising in the centre of the plain might run either to the Irish Channel or the Atlantic Ocean. Within this basin there are really two Irelands. There is the Ireland of the North, where the land is, comparatively speaking, poor land and the climate cold, where the farmers are shrewd, intelligent men, who have made the most of their circumstances. The farm steadings are trim and well kept. The land is well tilled. There is an air of prosperity about the country. There is the Ireland of the South, where the land is better and the climate milder, and the people, possibly to some extent because nature has done so much for them, are less energetic; where the steadings are ill-kept and the land badly tilled, and waste and neglect are much in evidence. The difference between these two Irelands is so great that when the section of the Scottish Agricultural Commission which went North met the section which went South, they had formed entirely different conceptions of farming in Ireland. The Northern section was inclined to compare Irish farming, as they had seen it, to Danish farming. There seemed to be the same intelligence applied to agriculture as in Denmark. There seemed to be the same economy and thrift practised on the farms. There seemed to be something approaching to the same comfort. The Southern section, on the other hand, were disappointed. They saw good land in a good climate going to waste for want of energy on the part of the farmers. They saw bad and badly kept farm buildings. They saw an Ireland where to the outside observer the policy of the Department of Agriculture would, if followed, produce the earliest and most fruitful results, and yet that policy was making comparatively little headway."

* *Vide* Revival of Agriculture in Ireland, as seen by the Scottish Agriculture Commission, 1906.

With reference to the statement that in the North the land is comparatively "poor land, whereas in the South, land is better," it is worthy of observation that the Board of Valuation of Land under Act Rate, 1642—over 250 years ago—for "settling adventures" fixed the value of the land of Ireland by Provinces as follows :—

Leinster,	12	shillings	per	acre.
Munster,	8	„	„	„
Connaught,	6	„	„	„
Ulster,	4	„	„	„

I regret that in the passage quoted, counties on the east coast and further south, such as Louth and Wexford, are omitted from the tribute of that praise of the Commissioners which they equally deserve.

Next in order to stall feeding comes the question of mixed farming. No. 2 Diagram illustrates material facts as to the distribution by acreage of the crops in each area A, B, and C, respectively. As the percentages thereon are by group areas, it is important to examine what proportion they bear, not merely to each other, but to the whole acreage under crops in Ireland.

The following Table should be considered in relation to those given in the diagram which, however, excludes mountain grazing.

PERCENTAGE DISTRIBUTION.—CROPS, Etc., IN IRELAND.

Group.	Corn.	Green Crops.	Potatoes.	Grass.		Hay, Rotation Grazing, and Permanent Pasture.
				Hay and Rotation.	Permanent Pasture.	
A,	36·9	29·6	51·6	34·4	21·7	25·5
B,	44·8	47·3	38·2	43·7	39·0	40·3
C,	18·3	23·1	10·2	21·9	39·3	34·2
All Ireland, ...	100·0	100·0	100·0	100·0	100·0	100·0

In view of what I have already pointed out as to the dependence of A upon cows and dairying, the small proportion of acreage appropriated to green crops bears striking testimony to the extraordinary advantage of climate and quality of the grass of Ireland. When this last Table of percentages of crops is examined in connection with No. 1 Diagram, the remarkable and inherent suitability of the soil and climate of Ireland to the production and rearing of cattle becomes most evident. With only 2·9 per cent. of its total area appropriated to green crops on A, the cattle of all classes, reared and maintained, number 1,428,367.

It will be noticed by No. 1 Diagram that more than half the bulls of Ireland are on B.; and that the bulls on B. and C. represent 87 per cent of the total number in Ireland. Figures, however, are of less importance than quality. The small occupiers are not able to keep bulls of the quality which larger holders, in order to succeed, must do. Small farmers have thus opportunities for the service of a class of bull they themselves cannot keep, owing to big neighbouring holdings.

Though the Agricultural Returns, specially collected for the Commission, exclude grazing animals, other than cattle, these must be referred to, though they cannot be grouped or shown on the Diagrams. The numbers for all Ireland are as follows :—

Horses, all ages, . . .	604,413
Mules, Jennets, and Asses, . .	262,636
Sheep, ...	3,714,832

As regards sheep it may be here pointed out that the number of sheep in Galway and Roscommon represent 65·9 per cent, of the total number in Connaught; while the number of sheep in Connaught is not far short of the total number in Munster and Ulster together; the sheep in the Province of Connaught being 30 per cent. of the total number in Ireland. Though small occupiers in Group A. may rear and mature horses to a limited extent, sheep farming on any scale on such holdings is, in a general sense, not possible. The obliteration, or even a substantial deduction from the agricultural map of Ireland, of the great grazing tracts would seriously affect if not destroy, those two great and prosperous branches of agriculture concerned with horses and sheep.

To inculcate better agricultural knowledge and more activity by occupiers of Group A, for the production of green crops—so essential to early forwarding of beasts towards the fattening stage—offers more certainty to the prosperity of Ireland than heroic but dangerous experiments in breaking up the great grass lands and banishing graziers from Group B and C; the result of which policy I have here endeavoured to examine.

In conclusion I desire to call attention to what is happening in Great Britain—labouring under climatic disadvantage as compared with Ireland—as a cattle producing country.

Returns for the United Kingdom, for 1867 and 1906 show, viz., that the percentage of total agricultural areas appropriated to permanent grass has in—

England increased by 14·6 per cent.
Wales „ „ 12·5 per cent.
Scotland „ „ 5·0 per cent.
While in Ireland the figure is but 3 per cent.

These facts are noteworthy, but the causes of such changes do not affect the purpose which has compelled me to state my reasons for disassociating myself from much that appears in Section XX. of the Report. I take this step because the general tenor of the section seems to me more favourable than not, to proposals for breaking up the grass land and abolishing the grazing system as now carried on throughout Ireland. I dissent from arguments favouring these proposals founded upon theories and probabilities, and, failing to recognise sufficiently the economic value of these great grazing tracts to the host of small holders whose position in this regard I have endeavoured here to explain. Apart from their interest in this matter there is involved in such proposals a danger which concerns the people of the whole United Kingdom. By a great act of State policy these occupiers are being converted into owners—subject to the payment of annuities to the State for a very long period of time. If by the action of the State the conditions under which they agreed to become annuitants are changed in a manner adverse to the interests of the overwhelming majority of these purchasers, their claims for a diminution of their annuities would become in equity irresistible. On these grounds I record my disagreement with the general character and tendency of Section XX. of the Report.

II.—The Constitution of the Courts and Matters incidental thereto.

Security of Property is the essential condition, not merely of commercial prosperity, but of social order and economic stability. On the other hand, the State does, and must, in the public interest, exercise its right to interfere with, or take the private property of any individual, or body of individuals. In the exercise of that power the security of property, in its widest and most important sense, is shaken, unless two fundamental conditions are observed and enforced. These are :— Sec. XXV Para. 197.

1. That where compulsory power is applied, any individual or individuals whose property is taken, or interfered with, shall receive full measure of compensation for any and every loss sustained by the action of the State.

2. That the Court or authority set up to inquire into and assess the value of the loss sustained by expropriation shall be impartial; and independent alike of administrative influence or spontaneous popular pressure.

I venture to submit that the future of Ireland is more deeply concerned just now with the strictest enforcement of these conditions than any other community in Christendom. The history of Ireland down to to-day is but a dismal record of causes producing a chronic insecurity of property. As in the early history of all countries so in Ireland, there were ages of internecine strife, where possession had no security but the despotism of physical force wielded by numerous rival chiefs engaged in robbing each other. Next came a succession of centuries in which—as referred to in paragraph 17—properties in Ireland were the stakes with which alternating English authorities gambled. This period of successive violent disturbance of property was followed by conditions of quiescence. Things were left to take their course and economic laws free to operate. In the result "Tenure at Will" became the rule of occupation over three-quarters of the whole country. In Ulster, a custom grew up which recognized that improvements made by the occupier were an asset of occupation. So the men of Ulster, who farmed land, came "to be protected in the enjoyment of what had been created by their own industry and laid up by their self-denial." In the other three Provinces no such custom was evolved and this custom, tending toward security for the occupier, had no existence; over the greater portion of Ireland, security of tenure was but a personal or family tie. So long as the tenant fairly paid his rent, he remained in the peaceable enjoyment of what was merely a sentimental security. The holdings being small and numerous and their occupiers multitudinous—and very prolific—provision by the landlord of buildings and offices, as in England and Scotland, was a practical impossibility. So the people on the land increased and multiplied exceedingly while the whole social fabric and economic structure rested upon the potato. Implicit reliance on this single succulent root thus became, both for occupiers and owners, an article of economic faith,* to be shattered when men, women and children on these small holdings perished by the thousand, leaving famished survivors hopeless, and a host of landlords irretrievably ruined.

The great famine was nature's remorseless punishment of disregard of her laws, a warning for all time. As a consequence of this overwhelming disaster a new departure was taken in Irish agrarian policy, drastic in character

* Sir William Petty, in 1672, evidently resenting opinions that laziness was an Irish characteristic, wrote :—"Their lazing seems to me to proceed rather from want of employment and encouragement to work, than from the natural abundance of phlegm in their bowels and blood; for why need they do work who can content themselves with potatoes, whereof the labor of one man can feed forty; and with milk whereof one cow will, in summer time, give meat and drink enough for three men, when they can everywhere gather cockles, oysters, mussels, crabs, etc., with boats, nets, angles, or the art of fishing."

and momentous in effects. Its aim was to rid the country of ruined landlords, and to supplant them by new men and so bring more money into Ireland; its object being to establish land transactions, as between owner and occupier, on a purely commercial free trade basis. At that time the landowners of Ireland were mostly representative of historic connections, and held in traditional regard by their tenantry. With such links occupiers believed their tenure to be secure, subject to payment of a rent almost hereditary in character and sometimes in amount. This Incumbered Estates Act was successful in ridding Ireland, for a time, of a great number of ruined landlords and in promoting speculation, on a large scale, in Irish estates. It also tempted a multitude of Irish professional men, merchants, and even small traders to invest money in land, as the Incumbered Estates Court, acting as promoter and auctioneer, divided up many estates into many small and convenient lots all over the country. A new and smaller class of landlords was thus created by the act of the State, and competition to acquire the status of a landowner being keen, various classes of Irish citizens, without quite sufficient capital to buy land, borrowed the required balance on mortgages.

In those days confidence was general in the honour and faith of Parliaments, and in their power to enforce the obligations of both. Purchasers, therefore, felt their security would not be tampered with, that their savings invested in land, in the country of their birth and business, would be safe. They expected, and rightly expected, "to be protected in the enjoyment of what had been created by their own industry and laid up by their self-denial." But the chief consequence of the working of the Incumbered Estates Act was that security of tenure, based upon traditional association, found no place when properties were transferred by the Court, from the representatives of a romantic past to the protagonists of a remorseless commercial doctrine then enforced by the Manchester school of thought. Eleven years later the result took such painful form and effect that Parliament inaugurated that long series of Acts (from 1860 and continuing to the close of the century), to try and adjust relationship between owners in a minority, and occupiers in an overpowering majority, so as to secure agrarian peace for Ireland. The nineteenth century ended with little prospect of fulfilment. The economic position then may be thus epitomised. Those who had bought tenanted land on the Incumbered Estates, and suffered injury and loss by subsequent legislation, could not re-sell it in that Court. There were, practically, no buyers, except the occupiers on the land. Occupiers had a free, open and brisk market and prices obtained for their occupation interests were, and still are, great, often enormous. The crowning economic absurdity was that a judicial leasehold of a farm was more saleable for ready money than the freehold. To extricate Ireland from so false an economic situation, the Act of 1903 was passed, which, by the use of public credit, provided for the wholesale transfer of all the tenanted land of Ireland from owners to occupiers. Owing to that successful Act, this great organic change is progressing rapidly towards complete accomplishment.

The general character of the process (which commenced in 1849 and with an ever-increasing disturbance of property, continued down to 1903) was to depreciate the value of ownership in fee; to prevent landlords not only from interfering with their tenants, but to deter improving landlords with capital from locking up any more money in land on tenanted portions of their estates. Beyond obtaining rent, fixed by the instrumentality of the State, owners of property in Ireland were compelled to abstain from the discharge of the function of ownership appertaining to that position in all other countries. This forty years' course of legislation, actuated with the best intentions, produced economic chaos. The underlying principle of all these Acts was, by the artificial appreciation of occupation value, carved out of the value of ownership, to endeavour to settle Ireland and bring her peace. Loss of confidence in the recognition by the State of its obligation to defend rights of property, acquired and held under terms of its own making, and practical proofs of its neglect to defend them, cannot long confine results either to a particular form of property or to a particular class. The Act of 1881, passed

to bring peace to Ireland, by a drastic change of relationship between occupiers and owners in the manner referred to above, produced evil consequences to classes other than landlords. A comparison of the figures of the Census of 1881 with those of 1891 shows how great was the exodus of the artisan and industrial classes from the three provinces, which are practically wholly agricultural, and without, as in Ulster, great centres of industrial employment.

It would seem that the particular purge applied to owners—who, however, might perhaps remain in the country—harshly operated upon the industrial class, by diminishing opportunities of employment. Numbers could not continue in their homes, and so they disappeared altogether from Ireland. This present century opened with a general recognition that the social and economic situation in Ireland was intolerable, and that means of escape from the network of confusion, due to legislation, must be found. The only possible door of retreat was by a courageous and wholesale conversion of tenants into owners by the use of State credit, and on a sufficient scale to encourage landlords to part with their properties. The principle of facilitating purchase by State aid had already been applied to a limited extent. Under previous Purchase Acts the bankrupt and impoverished landlords, without any substantial margin of income, had already been forced to sell, almost on any terms. The owners of estates remaining were mostly well-to-do, and therefore had naturally to be offered inducement to sell voluntarily. Their properties had, in very many cases, been in their families for generations, and the force of sentiment made it hard to part with them.

Thus at the present moment the tenants are in process of conversion into owners, subject to payment of annuities to the State over a long period of time. For a couple of generations, occupiers of agricultural holdings in Ireland will be tenants of the State subject to the payment of annuities, but with secured reversion to them of ownership in fee of their holdings when the purchase money, advanced by the State, has been repaid. But that great and salutary change cannot of itself attract capital, nor keep it localised in Ireland, unless financial confidence be restored, and a belief in assured security of property in Ireland be finally re-established. In the absence of these things it is not likely capital sums paid by the State, in the form of purchase money, will remain in the country. In the interests of the economic welfare of Ireland—including those of the purchasing tenants—it is most desirable it should. The "*magic*" of ownership—of which this Commission has heard so much—will not long abide in a land from which capital has been frightened and fled. Those who have capital in the liquid form of money cannot be restrained from investing it where they choose, and following it if they like, while the peasant proprietor, whose all is the land, has no door of escape from economic disaster, due to the absence of national capital and depreciation of national credit.

It is notorious that the great volume of opinion of the propertied classes of Ireland tends much more to distrust than to confidence in the security of property in that country. This is a by-product of antecedent legislation. Under these circumstances the method and procedure to be adopted for carrying into effect compulsory expropriation is one of grave moment, even though it is only within a limited area the principle of compulsion is to apply. It is from the point of view of the general interest of the whole community—Professional, Industrial, Commercial, as well as Agrarian, that the probable effect of the State's action must be considered. If the terms and conditions for the compulsory expropriation of owners, tenant-purchasers, tenants, and other representatives of landed interests in whatever form, are to be settled by Courts, too much care cannot be taken in the nature and character of such Courts. If confidence in Parliamentary honour and faith is not wholly to disappear, and if belief in the security of property in Ireland is to be re-established, the constitution of the Courts must be regarded as the paramount consideration in carrying out the operations of compulsory expropriation.

Now, the proposal of Paragraph 197, is to set up two Courts :—A Court of First Instance and a Court of Appeal. The question as to whether there should be one or two Courts ; or whether the ordinary principle of arbitration is or is not applicable, are subordinate questions as compared with the nature, the structure and the *personnel* of the body or bodies to be set up. The main function of such Courts must be to re-establish in Ireland that confidence which is essential to economic stability ; to uphold principles of equity and justice, by which property is alone secured, against administrative influence exercised by the State to get properties cheap, or popular pressure to extinguish a propertied class on the quickest and easiest terms. In effect the courts must act as the executors of the honour and faith of Parliaments of the past. In the interests of the economic future of Ireland, the Court, or body, set up to perform such high duties, should command general confidence not only in Ireland, but outside it, and exemplify in highest form the cold impartiality of the judicial spirit. I cannot agree with the assumption, so obvious in the proposals of Paragraph 197, that the Department of the Land Commission is the true reservoir from which can be drawn all the elements required to constitute such Court, or body, possessing those necessary characteristics I have attempted to describe, which I am convinced are essential to induce capital, not in the form of fixtures, to remain in Ireland.

Such being my contention, it remains for me to support it by reference to facts and circumstances.

Before stating the case as it presents itself to me, I feel that in order to avoid being misunderstood, it is necessary to make one general observation. Cool impartial judgment is not so remarkable a characteristic of an imaginative people as violence of partizanship and bitterness of class prejudices. The stream of tendency of popular thought is much more influenced by persons than by principles. The personal element—so peculiarly and indigenously ephemeral—counts for so much while principles are not very acceptable unless very elastic. I desire, therefore, to say, I entirely repudiate participation or sympathy with those who cast reflections upon persons who have in the past served the Department of the Land Commission, or who are now serving the State in that, or the Estates Commission branch of the public services.

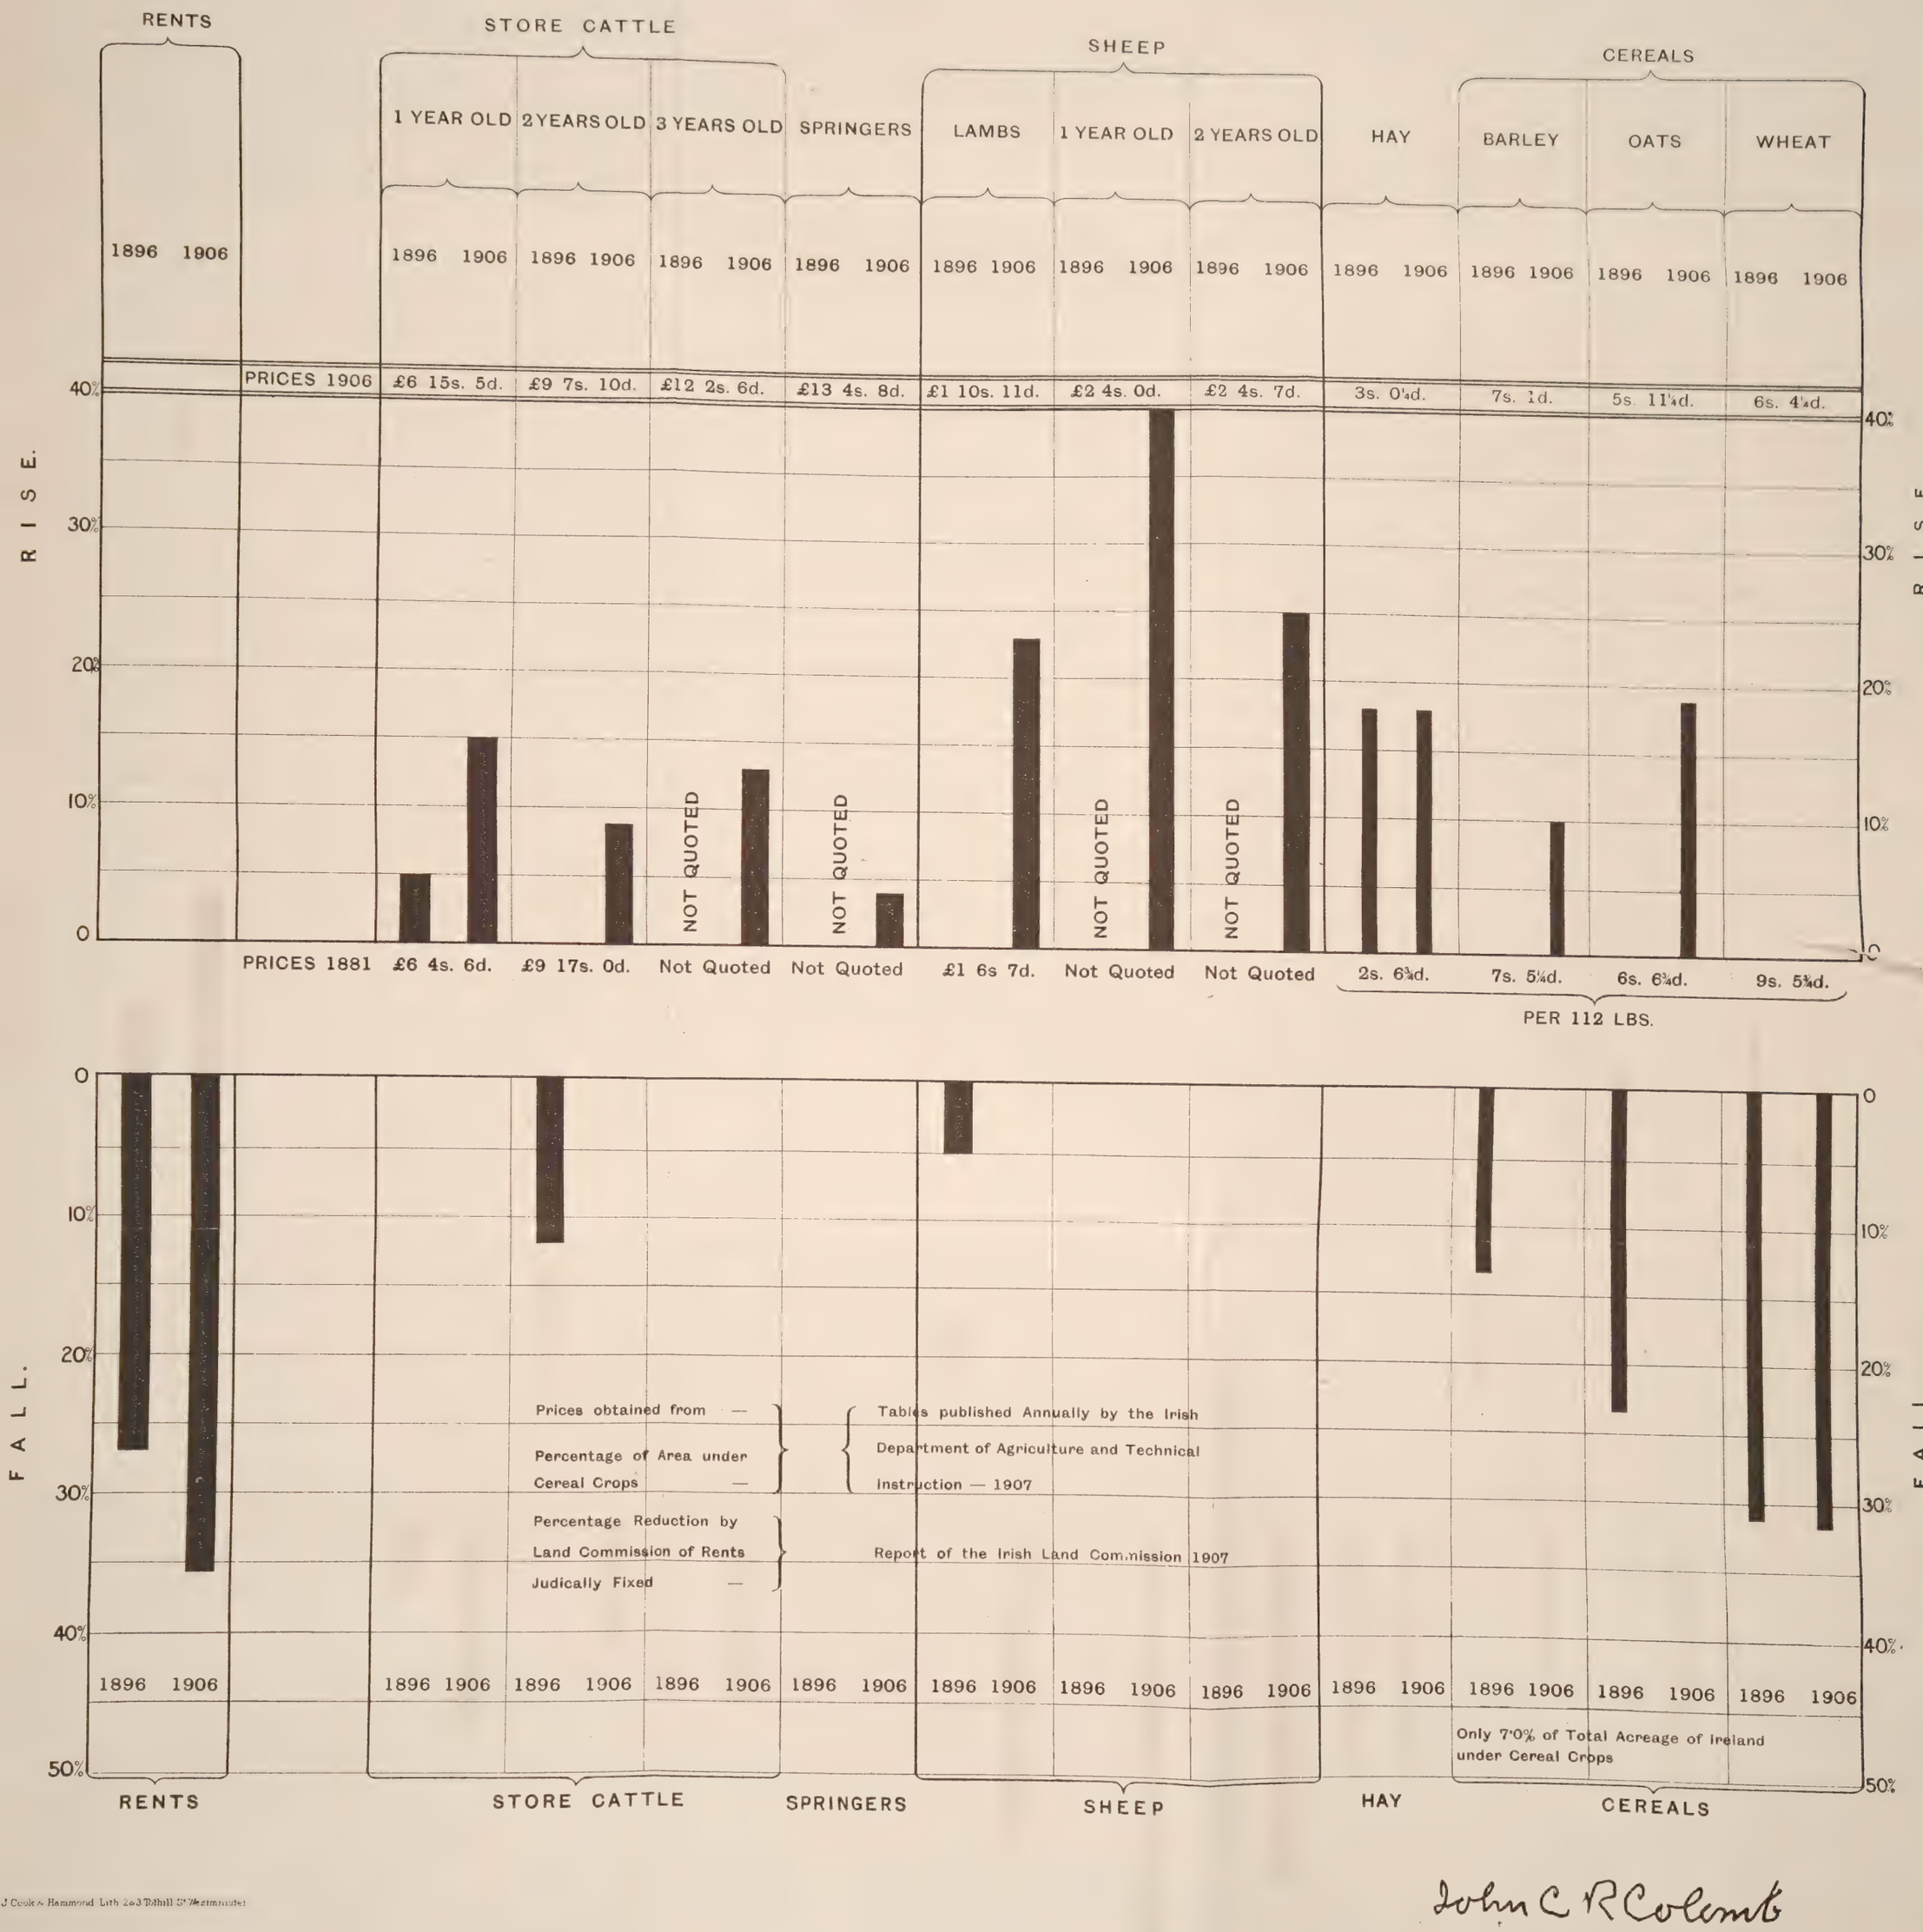
The Court of the Land Commission was by the Act of 1881 set up and consisted of one judicial and two lay Commissioners. The first holders of these offices being named in the Act (Sec. 41). They were all distinguished men, one of the lay Commissioners being not only a landed proprietor himself, but by profession one of the largest, if not the largest, Land Agents in Ireland at that time. Power was conferred upon the Lord Lieutenant to appoint and to remove Assistant Commissioners with "prescribed"* qualification to held office for the "prescribed"* time. Provision was made for the delegation of the power of the Court (except as to appeals) to Sub-Commissioners ; and immediately after the passing of the Act the operations of the Court commenced and have continued to the present time. The power conferred upon this Court really embraced the supervision and control of all matters concerning the mutual relation of owners and occupiers. For present purposes only reference to proceedings concerning the fixation of rents is necessary, and, as already explained, the question of tenure and tenants' improvements were the prime factors determining the principles of policy which legislations expressed. The question of rent was but incidental to the general character of that policy.

As regards the Act of 1881, I point to the fact that the Ministers who framed and passed the Bill never appeared to contemplate a general and sweeping reduction of rents all over the country. It is still more remarkable that Mr. Parnell himself and many prominent Irish landowners then in the House, repudiated the notion that such a thing would happen. In support of this I append a memorandum (A) of extracts from Hansard.

* The term "prescribed" meant prescribed by Rules made in pursuance of the Act.

Diagram

ILLUSTRATING THE REDUCTION OF RENTS JUDICIALLY FIXED BY THE LAND COMMISSION FROM YEAR OF ESTABLISHMENT, 1881, TO 31st MARCH, 1906, AND SHEWING DURING THE SAME PERIOD THE CONSIDERABLE RISE OF PRICES IN MOST OF THE AGRICULTURAL PRODUCTS OF IRELAND.



J Cook & Hammond Lith 263 Tothill St Westminster

John C R Colomb

In studying the debates during the passage of the Bill through Parliament, the reflection is unavoidable that, had the consequences been foreseen of setting up a Court with powers of delegation to subordinate assistants to deal with rents as they thought fit, and uncontrolled by principles or precedent, the provision of the Act of 1881 would have been widely different. However this may be, reference to the accompanying diagram I attach to this memorandum can hardly fail to illustrate the anomalous curiosities and economic confusions which are the product of twenty-seven years of unceasing labour by the administrative machinery set up in 1881 to settle the Irish land question. For salaries, offices, and incidental expenses, this machinery has cost the general taxpayers of the United Kingdom hundreds of thousands of pounds. This is not all. A huge amount has been transferred from the pockets of both occupiers and owners into those of solicitors. Perhaps this accounts for the curious fact that, though during the twenty years preceding 1881 the ratio of number of solicitors per head of population was steadily decreasing, it has during the twenty years following the Act most markedly increased. Besides, when Courts assemble the public-houses do a roaring business during their sittings, so the proceedings of the Land Commission may perhaps in part account for another fact, viz. :—that between 1881 and 1891, the number of "On Spirit Licences" per number of inhabitants was greatly augmented. The money spent on lawyers and the money and time wasted in public-houses, and so diverted from the land, was also a wastage of national resources in full swing during the last twenty-seven years.

The Diagram I attach is designed to illustrate to the eye the result of the Land Commission's operations. It shows at a glance that this "Court" has apparently inflicted upon Ireland a new law in economics, wholly unknown in any other country of the world, viz. :—that fair agricultural rents should be fixed in inverse ratio to the price of the chief agricultural products.

Undoubtedly much of this result and the defeat of the anticipation of the framers and supporters of the Act of 1881, may be traced to the following administrative causes :—

1. The too free use of powers of delegation.

2. The fact that the field of choice of persons qualified to perform the functions of Assistant Commissioners was very limited, and so adequate tests of fitness were difficult to enforce, especially under the pressure of political patronage so exacting in Ireland.

3. That no rules or principles to govern the judgment and action of fixing rents by Sub-Commission Courts were made.

In support of this view I append Memorandum B, which gives extracts from the Reports of Committees, and a Royal Commission, which, from time to time, have inquired into the working of the Act of 1881. It is also necessary to call attention to evidence given to this Commission by those especially qualified to express opinions upon this subject.

As pointed out in Paragraph 159 of the Report, "Mr. Commissioner Bailey, who was himself engaged for sixteen years in the administration of the Act, spoke of the dissatisfaction expressed both by landlords and by tenants as to the fixations of rents." This is not surprising in view of his answer to Q. 16285—". . . . my own view is that the Land Commission did not work perhaps as satisfactorily as it ought to have worked from the fact that it never has faced the question of laying down principles for the valuation of holdings. It has always left these matters to the opinion of the particular valuer, and the result is that there are no settled principles for the valuation of land for the last twenty-five years, which will enable you to find on what basis it is done."

Mr. Commissioner Finucane gave it as his opinion that "the system of fixing rents is demoralising to the people, apart from any other considerations," Q. 16181. ". . . It would not be safe to base a revision of rents

here on the rents previously fixed." Q. 16184. Again he epitomised the process of fixing fair rents and valuing tenants' improvements, in these words, "The tenant reasonably, or unreasonably, will say—'The Assistant Commissioner is coming round next year, and if he finds the land in good condition the rent will be raised.' He will not, therefore, go in for improvements. On the other hand, in regard to such improvements as he claims, it is well known that some are occasionally pretended improvements. He sticks in a drain at the end of a field leading into a ditch, as I have seen for myself. The Assistant Commissioner comes along to look at the improvements that have been made, and he will see the end of the drain. This is not done to any extent, but it is sometimes done, and the drain is claimed as an improvement. The result of that is, that the system leads to deterioration of the land, and the discouragement of improvements, and to perjury in the Courts, and demoralisation of the worst character" (Q. 16165). A curious practical illustration of methods of dealing with tenants' improvements for abatements of the landlord's rent was given by Mr. W. H. Boyd. In the position of a quasi-trustee and under advice of Counsel he applied to have a judicial rent fixed. The old rent since 1869 had been £18 9*s.* per annum. Mr. Boyd gave evidence and conducted his own case. He stated to the Court that he had received for the use of the land for each year from 1869 to 1899 £35, and since 1899 to the date of the proceedings, £28. He told the Court that the land was always grazed or in hay, and that he had not done any improvements. Nevertheless, the "Judicial Rent" payable to the landlord for the next fifteen years was reduced from £18 9*s.* to £9 3*s.*, more than 50 per cent. reduction (Q. 25189).

The above sufficiently indicate the grounds of my contention, that experience and facts do not justify a proposal to establish, out of the existing Land Commission Department, Courts for settling the terms under which owners of land are to be compulsorily expropriated.

The Estates Commission having been mainly recruited from that Department naturally presents the same characteristic.* The opinion expressed to this Commission by the Estates Commissioners themselves has impressed me with the conviction that there exists in both Departments a very strong tendency to "bear" the price of land in owners' hands and to "bull" the value of tenant's occupation interest. After all, this is not surprising, they are honourable men and, as public servants, intent upon doing their duty to the public according to their lights. They occupy the position of Government brokers. It is their business to buy as cheap as they can, and they have at their back the whole volume of popular favour generated by the desire of all occupiers wanting the land. Now, they may be very excellent brokers, but if my view be correct, that does not qualify them for judicial functions.

Having now reviewed the broad features of the general question on which I take issue, I pass to the proposed method of dealing with land where net income returns are not available, mainly untenanted, and liable to the exercise of compulsory powers within the Board's area. From what I have already said it will be understood I strongly object to the suggestion that, as a preliminary to assessing the value, a fair rent on such land should be fixed by the Land Commission. It is proper here to point out that "untenanted" differs from "tenanted" land in this, that land "untenanted" is outside the purview of the Act of 1881, and by that Act the owner was left the enjoyment of an open market. The owner can do what he likes as regards letting, or otherwise, and fix his own terms when granting temporary use of untenanted land for any period of time he may choose. What a "Fair Rent" really means no one knows, no attempts have been made to give the term a statutory definition. "Fair Rents," in the practice of the Land Commission, have been fixed according to the view of particular men at a particular

* Note.—The experienced Solicitor of the Board, Mr. J. O'Connor, informed us that the Land Commission and the Estates Commission were "one and the same." [Q. 13150.]

time—and how much the actual amount so fixed may be affected by the state of digestion of an individual, at the particular moment, no one knows. But such fixation is only applicable to tenanted land and only for 180 months, whereas if applied to untenanted land, and accepted *as a true basis for computing capital value* for compulsory expropriation of its owner—it is for all time. These reflections appear to me to be fatal to the proposal contained in paragraph 197, unless rudimentary principles of justice are to be abandoned. In that case, of course, restoration of confidence in security of any sort of property in Ireland cannot be regarded as within the reasonable expectation of the present generation. I therefore approach consideration of the methods and the assessment of true value of untenanted land from the point of view that there is no parallel between the case of tenanted land and untenanted land in relation to purchase price; except where the net income derived from untenanted land is ascertainable. I go further and claim that where, from one cause or another, the net income from untenanted land cannot be exactly ascertained, the same treatment as by law and custom safeguards all properties elsewhere when subjected to compulsory acquisition in pursuance of public policy, should apply. I can see no reason why, because the land is in Ireland, its owner should suffer any disabilities from which ownership of land in England, Scotland, or Wales is exempt. If the State takes land away from an owner in Ireland it should, as regards price, and conditions, be subject to the decisions of a Court of Arbitrators as qualified, and commanding as much public confidence for impartiality and freedom from administrative influence, as in Great Britain. If, in carrying out a careful and wise policy of relieving congestion involving compulsory expropriation, loss is incurred, that loss should fall upon the British Exchequer, and not, through the instrumentality of questionable tribunals, be imposed upon the private resources of private individuals whose property so taken happens to be situated within a prescribed area in Ireland. I now turn to examine some reasons offered to the Commission in support of a programme of "crying down the credit" of owners of untenanted land in Ireland and of a theory as to the depreciation in value of grazing lands.

Alleged Grounds for Reduction of Value of Grass Lands.

Mr. Commissioner Bailey explained to us that certain people on mountain or bog plots "had become vocal, and made it plain that in their opinion the system (*e.g.*, the grazing system) that deprived them of the chance of acquiring the land was objectionable and contrary to the good of the community," and that as a consequence "graziers became unpopular and owners found that difficulties were put in their way." "The result," he said, "is that, in some localities, especially mid-Galway, and in parts of Mayo, after a period of agitation, stress, and discussion, owners became inclined to sell their untenanted land for the purpose of distribution among small tenants." I do not dwell upon side issues of such a statement from a high official in a Government Department, but content myself with observing, that a wish to obtain land is not peculiar to Ireland, and has nothing whatever to do with value, except that the better the land the stronger will be the desire to get it. He then proceeded to explain the policy inflicted upon owners of untenanted land—when confronted with these difficulties—by the Estates Commissioners. "Some owners," he said, "finding that the existing system of letting grass lands on the eleven months' system was becoming difficult, attempted a procedure of breaking up their grass lands into suitably-sized holdings, and getting and obtaining fines for the tenant-right in such newly-created holdings, either by public auction, or more generally by private agreement." I point to this official confirmation of the readiness with which grass lands can be sold in that free market, which law and custom assumes still to exist for them, just as occupation interests can be disposed of by tenants in their open markets. But according to Mr. Commissioner Bailey "this method of dealing with grass lands is objectionable. It encourages the land-hungry people to bid prices, frequently out of all proportion to their value. The effort to raise the purchase-money

frequently led to borrowing and indebtedness, that kept the people in poverty and misery, and lessened the security for the repayment of advances of public money." With reference to this, it must be observed that there is no embargo upon purchasing tenants, judicial tenants, or non-judicial tenants buying and selling holdings to any extent or at any price they like. There is no evidence whatever before us that the Estates Commissioners have even hesitated to accept tenants as purchasers of their holdings on estates they have purchased, on the ground that they or their predecessors in title had paid fines for occupation.

We have had before us, and upon our records appear much evidence and many Tables setting forth the freedom with which tenants' interest is bought and sold, and we have ample testimony of the enormous amounts paid for it (see, for example, Appendix to our Second Report, p. 244). But it now appears there is to be one system for owners and another for occupiers in the matter of a free and open market. What law and custom assumes the owner of untenanted land in Ireland still to possess, the Estates Commissioners regard as "objectionable," and use their vast powers to deny him its advantage, for, Mr. Bailey added, "The system of creating holdings by the payment of fines is accordingly discouraged by the Estates Commissioners, who refuse to declare land so dealt with as 'Estates' for the purpose of the Land Acts" (Q. 16,805). In other words, no public advance can be obtained by an owner of grass lands who, driven by the stress of popular agitation making things difficult for him, presumes to divide his land up into lots to suit purchasers. Besides, the reasons given above for this action of the Estates Commissioners, for the protection of the land-hungry people who have agitated, Mr. Commissioner Bailey made the following remarkable statement:—"Where this was not the case the system resulted in the land getting into wrong hands. It enabled the sons of wealthier farmers and graziers to acquire the grass lands, and took away all hope of bettering their position from the smaller and poorer people who most needed relief." (*Ibid.*) In other countries it is not a usual public policy to discourage sons of wealthy farmers and graziers from putting their capital and labour into the land. There is, however, *another* aspect of the question, and it is this—*the double pressure exercised upon the owner to sell his land to the State—cheap.* On the one hand the exercise of his lawful rights and the security of his property are deliberately impaired by the irresponsible pressure of "land-hungry people;" and when he seeks to save himself and his property by breaking up this land into "suitably-sized holdings," and selling the occupation interest to the sons of well-to-do farmer graziers, not only he himself, but tenants so established on his property are, by the Estates Commissioners, debarred from advantages of sale and purchase under the Land Acts. A stroke of the pen of a Department thus aids outside influence in destroying the market value of untenanted grass lands, and so secure for the State, as an expectant purchaser, bargains at knock-down prices.

Alleged General Deterioration of Grass Lands.

Mr. W. L. Micks, of the Local Government Board for Ireland, informed us that "the best lands were in the original grants. I believe," he said, "in the Plantation Grants, but in addition to that a great deal of land was taken up during the Famine by landlords. Then the lands undoubtedly became better handled by men with capital." (Qs. 314 and 316). It was strongly alleged by many witnesses that untenanted land, being mostly grazing land, ought to be bought cheap, because it had deteriorated. Experienced and competent witnesses firmly deny that proposition as capable of general application, but of course admit that there are cases where, through neglect, the land had gone back. Mr. Patrick Flynn, Chairman, Carrick-on-Shannon Rural District Council—an intelligent farmer who employed labour and capital on his farm—gave interesting and instructive information as the results of his own practical experience. Questioned as to the eleven months' system of grazing, he was emphatic in his opinion "that with cattle grazing on the land it is not deteriorating" (Q. 33236).

Alleged General Fall in Grazing Rents.

It was also asserted, as a reason for knocking down the purchase price of grazing lands, "that grazing rents were falling." Much weighty evidence was given to the contrary effect, by those who ought to know best, such as Mr. J. Irwin (Q. 58,683–8). Colonel W. A. G. Saunders Knox Gore (Q. 47488), Mr. F. Shaw Taylor (Q. 56789), [O'Connor Don (Q. 41706–17)], and very many others who were either themselves in receipt, or as managers of properties were collectors, of grazing rents. It may, however, be desirable to quote a wholly independent witness—the Rev. J. P. Callanan. He said, "Rents for smaller grazing tracts have been kept up because of the greater competition, but in the case of the large grazing tracts I believe they have gone down." This is conclusive as to the demand for grazing, and where the market is free and lettings unfettered by artificially and arbitrarily produced causes, there is no depreciation of value—at all events for small tracts—of untenanted grazing land.

Alleged likelihood of future Fall in Value of Untenanted Grazing Lands.

Those who realise that present facts do not sustain contention for arbitrary reduction of price—on the plea of general deterioration, or fall in grazing rents—turn to the unknown future for justification of the demand for compulsory reduction of price to be given for grass lands.

For example, the probable effects of removal of restrictions in Importation of Store Cattle is urged. The interesting Memorandum on this subject (Appendix to our Third Report, p. 345), shows that opinion as to probable effects of such removal is not unanimous. Removal of existing restrictions will be a voluntary act of the State. The County of Wexford presents a good example of advanced and prosperous "mixed farming" carried on by small occupiers. In that Memorandum is a quotation from a communication received from that county—saying the farmers in that county, who have bought out, "depend mainly on the sale of store cattle to pay their instalments, and if the Government see fit to alter the economic conditions, which prevailed at the time the tenants undertook to pay these instalments, they will only consider it fair and just that a corresponding alteration be made in the method of payment." This question in relation to price to be given for grass lands in owners' possession, may be dismissed with these observations. The removal of present restrictions would affect all agricultural lands, though doubtless in different degrees. [O'Conor Don, Q. 41706–8.] If, therefore, in anticipation of a problematical alteration of existing law, purchase value of land is to be reduced, such reductions should be enforced against all description of land. I may also remark that it would seem likely that the smaller holdings which produce the cattle would suffer far more by the removal of existing restrictions than the owners of grazing tracts upon which cattle are matured and fattened. The graziers would find compensation for having to sell cheaper, in buying cheaper from those who must sell because they cannot live unless they sell young stock which generally they cannot keep. As other arguments, prejudicial to present purchase value of this class of property, have, in various forms, been advanced in evidence, it is desirable to affirm that speculation upon the future has its other side.

There are those who honestly and sincerely believe that if certain great organic constitutional changes were accomplished, Ireland would become a paradise of prosperity. It may be asked why is an owner of untenanted grass lands, who so believes, and is confident of the fulfilment of such hope, to be turned out of his property for less than its present and without regard to its future value to him? He will naturally say—"The probable enhancement of property in Ireland will increase the value of my land. I desire to hold on, and if turned out justice requires that I should receive full compensation for prospects as well as present loss."

Again, in view of the public expenditure and effort, through the agency of the Department of Agriculture and Technical Instruction, all classes in Ireland are entitled to believe that agricultural knowledge, industry and habits are in process of development and improvement. The result of all this must be to increase agricultural prosperity and so as a result the value of all sorts of agricultural land must correspondingly rise.

It is undoubtedly the case that there is now in Ireland a "rattling of the dry bones" of personal effort and industrial self-reliance long buried under disbelief in strenuous self-help, a disbelief—I may remark—largely attributable to former insecurity of property in tenants' improvements, and uncertainty of tenure.

In this prospect lies justification for reasonable hope of increased agricultural prosperity and augmentation of value of agricultural land. The advantages accruing therefrom are by law secured to the whole mass of tenant purchasers and tenants of all descriptions. It may, therefore, be asked why should these practical considerations be wholly ignored in fixing terms of expropriation?

Existing laws enforce payment of compensation to non-judicial tenants for disturbance. This, as an established principle in relation to tenants, cannot be overlooked in considering the question of compulsory disturbance of owners.

Other arguments presented to us may be classed as—

Sentimental and Speculative Claims for Reduction of Price of Untenanted Grazing Lands by the Action of the State.

In view of the amount of evidence tendered partaking of this character, I feel bound to make some brief remarks upon a subject I should much prefer to avoid. Broadly speaking those most insistent upon the expropriation of owners of untenanted land seem wholly unable to realize that the value of any commodity cannot be measured by the antecedents, the character, the popularity, or unpopularity, of its possessor.

Public feeling, whether it be ethically right or wrong, cannot successfully, or for long, defeat the working of the ordinary law of supply and demand, but it can produce economic chaos in which the whole community suffers—perhaps for unlimited time.

The questions of the constitution and character of the Court to deal with compulsory expropriation is therefore of paramount importance to the whole community of Irishmen in Ireland. Doubtless the difficulties presented by the problem are not inconsiderable.

As regards fixation of value, the witnesses appearing before us on behalf of the landowners suggested a method of assessing the annual value of untenanted land, which would obviate some of the difficulties to which I refer. They were unanimously of opinion that the State should accept the valuation fixed by its authority for purposes of Imperial taxation, as the basis of purchase price in compulsory sales to the State. If in designing the framework of legislation to carry out the recommendations of this Report, that unanimous suggestion is rejected, the gravity of the question of the constitution and character of the Court will be greatly emphasised.

Incidentally, will arise considerations concerning the appointment of members of such Court, or Courts, and I therefore draw attention to some precedents.

1. I have already mentioned that the Land Commissioners first appointed were named in the Bill (1881), the appointments being thus approved and ratified by Parliament before the Bill became Law. It is important to note that future appointments were vested in the Irish Executive.

2. That in the last great Act of compulsory expropriation for transferring the property of certain Companies to a Public Board (The Metropolis Water Act, 1902), not only were the members of the Court of Arbitration named in the Bill, but provision was made that vacancies occurring should be filled on the nomination—not of the Executive Government—but by the Lord Chief Justice of England (Sec. 23).

3. Still more recently arose—in relation to the settlement by Arbitration of Railway Strikes—questions of the character and composition of a Board of Arbitration, as between Railway Companies representing private capital on the one hand and Railway Employees, whose capital is largely their labour, on the other. The constitution of the Boards of Conciliation and Arbitration was determined by mutual agreement of the two bodies concerned. It was provided that in the event of Conciliation Boards being unable to arrive at agreement a single Arbitrator was to be appointed by agreement, or, "in default of agreement to be appointed by the Speaker of the House of Commons and the Master of the Rolls." Following the general character of the Land Clauses Act (1845), by which the settlement of terms and conditions are determined in an atmosphere free from any external influences, the above precedents are of importance. Their importance lies in the fact that the Irish Land Act (1881) and the Metropolis Water Act (1902) were framed to interfere with private property, and before these measures became Acts, Parliament approved the names of the first members of the tribunals charged with carrying out their provisions. Unhappily similarity ends there. In the case of the English Act—as I have already pointed out—it was provided that vacancies occurring were to be filled by the nomination of the Lord Chief Justice, while under the Irish Act the filling up of vacancies was left to the Lord Lieutenant, who changes with the rise and fall of political parties, and who is, rightly and properly, the fountain of political patronage in Ireland,

I have referred to the Railway Settlement as showing how in Great Britain both employers and employed in the vast Railway business, appreciate the grave importance of obtaining the exercise of a wholly independent judgment in the appointment of members of such tribunals.

To provide for non-agreement by their representatives, as to selection of an Arbitrator, they turned for his selection to the two great functionaries who are utterly removed, by their position and authority, from party interests, class prejudices, or the every varying gusts of popular favour.

It is because I look and hope for a new Ireland in which such a spirit may arise and prevail, and because without the security of property confidence can find no abiding place, that I have ventured to place on record the views I have so feebly and inadequately expressed.

If I seem to have unduly occupied space, I have done so because I hold fast to what seems to me to be an undeniable truth eloquently expressed by a master hand in the following words :—

> "It is not necessary for me in this place to go through the arguments which prove beyond dispute that on the security of property civilisation depends ; that where property is insecure, no climate, however delicious, no soil, however fertile, no convenience for trade and navigation, no natural endowment of body or mind, can prevent a nation from sinking into barbarism ; that where, on the other hand, men are protected in the enjoyment of what has been created by their own industry and laid up by their self-denial, society will advance in arts and wealth notwithstanding sterility of the earth and inclemency of the air, notwithstanding heavy taxes and destructive wars."

NOTE A.

RENT-FIXING ACTS—THEIR EFFECT ON IRISH RENTALS.

Extracts from Parliamentary Debates.

(1.) *Mr. W. E. Forster.* (*April* 25, 1881 ; *Hansard, p.* 1162).—We have no expectation that the low-rented tenants would venture into Court. They would rather leave well alone.

(2.) *Mr. C. S. Parnell.* (*June* 17, 1881 ; *Hansard, p.* 803).—He believed that the result of the working of the Act would be that, instead of the total rent-roll of Irish landlords being lessened they would have it considerably increased. Certainly he did not believe that a penny would be taken off the rental of the Irish estates.

(3.) *Mr.* (*afterwards Judicial Commissioner*) *Litton.* (*June* 20, 1881 ; *Hansard, p.* 889).—The tenants constantly urge that they at all events had the impression that at the end of the fifteen years there would come probably an increase of rent.

(4.) *Mr. C. S. Parnell.* (*July* 1, 1881 ; *Hansard, p.* 1838).—The Bill would undoubtedly reduce many rents which were extreme rackrents ; but he thought that on the other hand it would raise many rents which were at present moderate, and that, as regarded the class of rents which were too high but which could not come under the denomination of rackrents, it would leave them untouched. The net result would be that the total amount of rent paid to the landlords in Ireland would be increased rather than diminished.

(5.) *Lord Carlingford.* (*August* 1, 1881; *Hansard, p.* 252.).—I maintain that the provisions of this Bill will cause the landlords no money loss whatever. I believe that it will inflict upon them no loss of income, except in those cases in which a certain number of landlords may have imposed upon their tenants excessive and inequitable rents, which they are probably vainly trying to recover.

(6.) *Lord Monck.* (*August* 2, 1881 ; *Hansard, p.* 476.)—The advantage which the tenants would gain by the Bill was this—that it would give them security for their tenure and for their rent, and the landlord would not lose in a pecuniary sense were his lands only fairly let.

(7.) *Mr. Gladstone.* (*July* 22, 1881; *Hansard, p.* 1697.)—Without presuming to attempt to determine the future relations of the judicial rents to the present rents, I will only say that I for one shall be bitterly disappointed with the operation of the Act if the property of the landlords in Ireland does not come to be worth more than twenty years' purchase on the judicial rent.

(8.) *Right Hon. John Bright.* (*May* 9, 1881 ; *Hansard*, p. 103).—The rents of Ireland will for the most part in nine cases out of ten be fixed very much as they are now.

(9.) *Mr. W. E. Forster.* (*July* 22, 1881 ; *Hansard, p.* 1685).—I think this Bill will be justified by what will happen, and I think the final result of the measure within a few years will be that the landowners of Ireland, small and large, will be better off than they are at this moment.

(10.) *Mr. W. E. Forster.* (*April* 25, 1881; *Hansard, p.* 1166).—I, therefore, am not surprised to hear a claim made for compensation. But the English law in the matter depends upon whether damage can be proved, and my firm belief is that no damage can be proved; on the other hand that, if the landlord were compensated, you would compensate him for conferring on him a benefit.

(11.) *Lord Chancellor Selbourne.* (*August* 2, 1881; *Hansard, pp.* 532, 533).—And now I pass to the subject of Free Sale. With regard to it, I deny that, under the provisions of this Bill, there is any ground whatever for saying that the tenant is enabled to sell, either in Ulster or in places where no Ulster Custom prevails, what is the landlord's, or is taken from the landlord. *I deny that it will diminish, in any degree whatever, the rights of the landlord or the value of the interest he possesses.* I should never agree to such a proposal. I adhere to what I said in 1870, that, to extend the Ulster Custom, or to do anything else in such a way as to take the landlord's interest from him and give it to the tenant would, in my opinion, require compensation. But nothing of the kind appears to me to be either contemplated or done by the permission to sell in this Bill. And if the rights of the landlord are not really diminished by this permission of free sale, I do not see how it can be a subject for compensation. *What does the tenant sell?* He sells his own interest in his own improvements, those which were not made by the landlord, and over and above that he sells the good-will of his tenancy as a going agricultural concern. That goodwill, in the actual circumstances of Ireland, is a most real element in the value of the interest which the tenant sells, for if a new tenant entered without the goodwill in the literal sense of the old, there is no question that his holding might be most insecure and even dangerous. There is also another sense of the word goodwill in which it also represents that which belongs to the tenant, but which the landlord would never, in any way, realise. I mean that fluctuating difference of value between the rent for the time being and what a person would give to succeed to the position of tenant, under all its actual conditions, a person desirous of land as a means of living in Ireland. Now both these—the goodwill of the holding, and the value of the improvements—are things which in no sense belong to the landlord.

(12.) *Lord O'Hagan.* (*August* 11, 1881; *Hansard, p.* 272).—Another objection entertained by opponents of the Bill was that it would subject the landlords to certain losses. But he believed that if it were administered conscientiously and honestly no material injury would be done to the landlord.

(13.) *Mr. Gladstone.* (*May* 31, 1881; *Hansard, p.* 1828).—The landlord's rights will not in my opinion be infringed.

(14.) *Mr. Law* (*afterwards Lord Chancellor*). (*April* 28, 1881; *Hansard, p.* 1401). Could anyone suppose that the tenant would rush into Court for such a sum as a pound? He would be a very bold tenant who would do so, at the risk of having to pay the cost of the proceedings.

(15.) *Right Hon. John Bright.* (*May* 9, 1881; *Hansard, p.* 103).—It will be the interest of neither of them (landlords or tenants) to go into the Court, and I believe they will almost universally, without going to the Court, make agreements with which reasonable landlords and tenants alike will be perfectly satisfied.

(16.) *Mr. Law* (*afterwards Lord Chancellor*). (*May* 26, 1881; *Hansard, p.* 1378).—All that would probably happen would be that a certain number of rack-rented tenants would get their rents reduced, and have a limited fixity of tenure.

NOTE B.

Land Commission Valuations.

1. The unreliable character of Land Commission Valuations has been the subject of unfavourable comment by every Parliamentary Committee or Royal Commission which has inquired into the subject since 1881, and also by witnesses who must be considered as having been in the best position for forming clear opinions about it.

2. The Select Committee of the House of Lords who inquired into the working of the Act of 1881 in 1882 and 1883, in their First Report (H. L. Paper No. 37 of 1882, page III., par. 3) referred to the "great uncertainty as to the principles on which the tribunals proceed."

3. In the Evidence appended to that Report (Qs. 1845–1848 ; 1873–1876, and 1883) remarkable evidence as to the difficulties of making correct valuations by valuers or other so-called experts was given by Mr. Morrough O'Brien, who was afterwards one of the Irish Land Commissioners.

4. In the Evidence appended to their Third Report (H. L. Paper No. 37 of 1883, Qs. 1012-1037) very strong comments on the want of any system or instructions for the guidance of Sub-Commissioners were made by Professor Thomas Baldwin, who was then himself a Sub-Commissioner, and was also generally recognised as one of the highest living authorities on Irish agricultural questions.

5. Finally, in their Fourth (and last) Report (H. C. Paper No. 139 of 1893, pars. 9-29), the Lords' Committee comment strongly on the unsatisfactory results arising from the want of definite instructions or principles, or any system or procedure which might produce uniformity or avoid injustice.

6. Some years afterwards, in 1894, a Select Committee of the House of Commons, presided over by Mr. John Morley, reported on the working of the Irish Land Acts up to that time, and arrived at the conclusion (H. C. Paper, No. 310 of 1894, page VII.) that, in fixing judicial rents, "each individual administrator acts absolutely according to his own opinion of what may have been intended" (by Parliament), "and there is neither a common understanding of the law nor anything approaching to uniformity in practice."

7. Later on, in 1897, a Royal Commission, with Sir Edward Fry as Chairman, was appointed to inquire into these and cognate questions. In their Report (C. -8734) they refer to the above passage in the Report of Mr. Morley's Select Committee, and they say of it (page 13) "our experience convinces us that what was true in 1894 is true now."

8. In the next paragraph on same page of their Report the Fry Commission refer to the whole of the rent-fixing procedure of the Land Commission in the following scathing terms :—"In such fashion is the solution attempted of one of the most arduous problems of distributive justice which has ever been raised.

9. The Fry Commission, moreover, found that the County Court Judges had failed quite as signally as the Land Commission to devise any trustworthy method of fixing fair rents. They say of their procedure (Report, page 9), "Some of the judges endeavour to form an independent opinion as the sum proper to be fixed, but the majority of them feel themselves incapable of so doing, and (in the absence of evident mistake) do nothing but adopt and register the finding of their valuer."

10. As to the principal officials who undertake to make these valuations, the Fry Commission say (Report, page 12):—"We believe that, as a whole, the Assistant Commissioners and the Court Valuers have striven honestly and to the best of their ability to discharge the difficult duties cast upon them," but the worthlessness of these good intentions and honest efforts as a means of securing trustworthy valuations becomes painfully evident later on, for the Commission say (Report, page 13) that "there is great diversity of opinion and of practice amongst the large class of Assistant Commissioners." Again, "It is remarkable that in many cases Assistant Commissioners and Court Valuers have been found to agree in their results, though differing in the process and principles by which the results have been arrived at." The Commission then refer to "several remarkable illustrations of this fact," and they record their opinion that "such agreement on the part of the valuers is, if possible, more strange than their differences."

11. This "strange agreement" between classes of valuers supposed to be independent of each other is more or less—but of course not satisfactorily—accounted for later on, for the Commission say (Report, page 17):—"The investigation of the Court Valuer, as hitherto carried on, cannot be considered an independent one. He generally considered himself bound by the decision of the Sub-Commission as to what improvements were to be allowed for; he admittedly accepted much on the strength of the pink schedule under appeal, and he was left at liberty to determine for himself what is a substantial difference from the previous findings."

12. It may be said that all these imperfections might be remedied by a Court of Re-hearing or Appeal. But we have had such a Court in the Chief Land Commissioners ever since 1881, and here is what the Fry Commission (Report, page 15), say of their procedure:—"An almost universal dissatisfaction is expressed with regard to these appeals, a dissatisfaction felt by some at least of the Commissioners themselves. No witness, with perhaps a single exception, spoke in defence of the existing system."

III.—Primary Education.

(*See paragraph* 246.)

However adequate the public expenditure and however efficient the administration of the Congested Districts Board may be, the permanent success of their operations depends upon the people concerned making the best use of the land they occupy. Acute intelligence and quickness of perception are striking characteristics of the people to be dealt with, while, on the other hand, the vast area over which the Commission travelled presents in western Ireland a lamentable picture of a widespread deficiency of even the most rudimentary agricultural knowledge. The importance, therefore, of agricultural education cannot be exaggerated. It is an essential condition of the real relief of congestion, and the promotion of prosperity generally, that the minds and energies of the people should be directed to making the best use of the land they occupy.

At present there is a great multitude of holdings hardly yielding a bare subsistence to their occupiers, not more by reason of the inferior quality of the land or the insufficiency of its extent, than because the treatment of the land by its occupiers is unskilled if not thriftless. The remedy for the evil conditions prevailing in the West of Ireland is not, by any means, wholly a question of migration or of enlargement of holdings, but largely depends upon teaching the people how to use the land properly for their own advantage. The Department of Agriculture has not been long enough in existence to show substantial results, but it may be expected that in due time great and abiding advantages will follow the efforts of that Department to improve the knowledge and practice of agriculture throughout the country. The work of that Department is, however, mainly concerned in helping and instructing the adult population, while many witnesses have pressed upon the attention of the Commissioners the great importance they attach to the adoption of a more suitable system from that which now prevails for training the youth of the country in preparatory knowledge and habits essential to ultimate agricultural and industrial success.

It appears to me that the representations made to us upon this question, in relation to the subject matter of our inquiry, are of such extreme importance that I feel it right to call special attention to evidence upon the subject tendered to us by witnesses representative of all sorts and conditions of men—priests, peasants, officials, and non-official persons, all speaking with the weight and authority which close touch with the people and knowledge of local circumstances can give. (*Vide* Qs. 19663, 21085, App. V., p. 230, 28069, 30110, 35428, 38199, 38557, 40197, 40201 46144, 46728, 5236 5343, 5343, 53917, and 57566).

XL., p. 110. I also draw attention with great satisfaction to the Resolution unanimously passed at the Board of National Education and of the Department of Agriculture and Technical Instruction, on the 17th December last. These resolutions in effect recognize the force of representations made to us by the witnesses to whose evidence we have referred, and when practically carried out accomplish these improvements in training the youth of an agricultural community for which these witnesses strongly pleaded.

I submit it is most desirable that within the area of operations of the Congested Districts Board that body should assist and co-operate in giving effect to the resolutions in question.

JOHN C. R. COLOMB.

MEMORANDUM BY DR. O'DONNELL.

While I am in general agreement with the Report there are two points on which I differ from the majority of my colleagues, (1) the measure of price under compulsion, as to which I record my opinion below, and (2) the question of giving compulsory powers to the Estates Commissioners for the relief of congestion outside the Board's area. On this point Mr. Kavanagh and I record our joint opinion. On the question of Practical Primary Education in congested districts I append a supplementary note.

The Measure of Price under Compulsion.

In voluntary sales net income has been much under discussion for several years past. The question arises with more propriety when it is proposed to take land for a great purpose by compulsion. In this case the owner is not to be placed in a worse position financially for the future than he would hold if the land were not taken; and to secure that object the readiest way seems to be to secure him his profit net income, provided it rest on a fairly stable basis. But the stability of the present income and the class of investment in which it is to be secured are essential, as well as correlative, elements of the problem.

Tenanted Land.

Hitherto in acquiring land for public purposes the State has prescribed no such measure of price as a sum that would yield net income to the vendor when judiciously invested. The principles that regulate the prices of lands taken up for railways or labourers' plots, small holdings or farms for evicted tenants, are no more defined in detail than those that regulate the fixing of fair rents. Nor do the latest Acts allow an addition to price on the score of compensation for compulsion.

Moreover when superior interests are compulsorily redeemed in connection with the Land Purchase Acts no such standard as that of net income has been followed. Crown rents, tithe rents and head rents are not subject to periodic revision and they have the ordinary rents as a margin of security. Yet these superior interests are redeemed at prices that render it economic under our scheme to pay them off before determining the sum that will yield the vendor his net income from year to year. This shows that we are recommending a higher price, in order to secure compulsorily the land required for the relief of congestion, for an interest subject to revision and with no margin of security but the tenants property than, say, for a tithe rentcharge. However, the recommendation is limited to profit net income.

No doubt owners selling voluntarily under the Act of 1903, between the bonus and the discharge of mortgages bearing high interest, apart from other considerations, sometimes improve their income very considerably. But when land is taken compulsorily, if they are secured their net income, the advantage that arises from paying off mortgages cannot be maintained in addition. The justification for securing the vendor his net income is to protect him from financial loss in the transaction. If net income did not mean profit net income the reason for the provision would disappear.

If the advantage to the vendor of redeeming mortgages is to be considered in compulsory sale (with which alone I am dealing), a more comprehensive measure of price than net income should be adopted. The alternative, then, would be to leave the price to the decision of the Court in view of all the circumstances of the case, after hearing landlord and tenant and anyone else interested in the matter. Thus a court, such as now fixes the amount of income the owner receives, year by year, in the shape of rent, would determine the aggregate sum, corresponding with the full value of his interest, that would yield his future annuity.

Just as it is generally felt that a town property yielding a steady annual income from a multitude of tenants in a poor quarter is not so desirable nor so valuable as a property yielding the same income from prosperous tenants in a wealthy quarter, so there is a considerable difference between income from a large number of poor agricultural tenants and the same amount of income from the comfortable tenantry of a prosperous estate; and the Court could

allow for this difference. It would not overlook the security of the holdings for advances as they stand nor the difficulty of making them economic, nor on the other hand, the advantages to the owner if he sold of himself under the Act of 1903. There would be no need on the part of the Court to provide a trustee investment for the proceeds of the sale of land that was settled property ; much less for the price of land under the vendor's control. The difficulty of investment would not be one for the Court unless so far as it affected a fair price. That price, as fixed by the Court's decision, would be binding on the landlord, the Board, and in the main upon the tenants. But all parties would have been heard.

As rents are much more likely to fall than to rise under future judicial revisions, and as ordinary rents have no margin of security except the tenant's interest, the owner's financial position is permanently and considerably improved if in compulsory sale his profit net income is secured. In all the circumstances of the case I agree to the standard of profit net income from tenanted land, as recommended by the Commission. But in case of any departure from this standard I should be altogether in favour of the compulsory price being fixed by the Court after considering any relevant circumstance, and hearing every person interested in the case. This would be in accordance with such precedents as exist.

Untenanted Land.

Net income from judicial rents has a basis of some stability. The occupier may be said to take a lease for fifteen years of the owner's interest, and tenant-right furnishes no inconsiderable margin of security for the judicial rent during the judicial period. Thereafter the tenant's interest will be a like security for, presumably, a smaller judicial rent. But to all this security scarcely anything corresponds in the case of grazing rents from untenanted land. No doubt there are cases where the same family of graziers have held from the same family of owners for more than one generation on easier terms than those that prevail on neighbouring properties. But in ordinary cases the competitive grazing rent covers the whole value of the land. There is no reserve of tenant's interest unrented. There is no margin of security. The ordinary grazier would not undertake to pay the grazing rent for fifteen years on lease. His agreement is for a year, or less, while the judicial tenant (*a*) contracts to pay the judicial rent for fifteen years, (*b*) is practically obliged thereafter. owing to his interest in the farm, to pay such a rent, less or more than the first, as the Court will fix, and (*c*) has the security of his own interest to offer for his payments.

That some of the grazing lands are deteriorating, that some of the graziers have not been successful, and that the importation of foreign cattle may cause a collapse, are also important considerations. Then, the outcome in the West of Ireland of the adverse feeling against the grazing system, which has for years being gathering momentum, is scarcely open to doubt. Whatever is to be said of the contention that the harshness of some owners largely helped to bring rent-fixing on the whole class, it is plain that the clearances of some have distinctly contributed to make it inevitable that the grass lands in the scheduled counties should be transferred from the owners to an occupying peasantry. The system of competitive grazing rents there is not likely to be again what it was. No doubt, it is a different case from that of the competitive agricultural rents that prevailed before the Gladstonian Land Acts; but the claim for more land is a sequel to, or the complement of, the claim for less rent in the congested districts. Men living on poor holdings, perhaps on patches of bog or mountain, saw at no great distance wide areas of good land under cattle and sheep. They may have recollected when some of this land was tilled, or known in some cases that their own families once occupied a certain portion of it, and were swept away. Such men had made their demands well known before the Land Bill of 1903 was introduced, and that measure passed through Parliament on the declared policy of securing larger holdings for the congests. The delay in giving effect to that policy has resulted in more extensive demands. Prices have gone up under the Land Act of 1903; but, on the other hand, in the circumstances attendant on and subsequent to that legislation, even if there were more than enough land to supply the migrants, it looks as if partition were the destination of the grazing tracts as a whole in the Western counties.

Nor can it be overlooked that, while in individual cases the effect of intimidation is rightly discounted when a price is being fixed, it is scarcely possible to make a corresponding allowance if trouble becomes chronic or recurrent over a wide area, and a general movement considerably dislocates a system which has not the commendation of giving employment to many people, and which, subject to exceptions, is declared on expert authority to be inconsistent with the best economic use of the soil. If legislation for the relief of congestion did not intervene, this adverse feeling against the grazing system would of itself largely dissolve the competition that hitherto existed, no matter how strenuous the efforts to keep order.

For the foregoing reasons income from grazing rents is too precarious to furnish a sufficiently stable basis for purchase, and profit net income, because of its liability to heavy diminution, seems inadmissible as a standard whereby to determine the price that should be paid the vendor, in the compulsory sale of grass lands, with the object of fairly securing that his financial position will not be worse than it would be if no sale took place. Where so much is problematical, the available alternatives seem to be either (*a*) to leave it absolutely to the Court to fix a "reasonable price," after the precedent of the Evicted Tenants Act of 1907, on examining the circumstances that are deemed pertinent to the case, and hearing the persons interested in it; or (*b*) to direct the Court to attend to certain specified considerations affecting the value of the land.

If the second course were followed, valuation as far as a second term rent would constitute the dominant factor in determining the price in view of the more permanent system of mixed tillage in moderately sized farms, under which the ranches are to pass in the scheduled counties. But occupation interest and net rent on the estimated gross rent, would also be important considerations; and net profit income in its estimated prospective value to the particular vendor, would be relevant as a different, but complementary, light on the subject of price, due regard being had to its instability. The Commission, however, has decided to leave to the Court, without drawing any guiding lines for it, the decision of the price corresponding with the full value of the interest acquired wherever the vendor cannot produce satisfactory evidence of net income, as net income cannot then be the index of price; and for one holding the views stated above in regard to the precariousness of net income from grazing rents and its unsuitability as a standard of price, even when ascertained, there would be little meaning in specifying the considerations that are to weigh with the Court when evidence of net income is forthcoming, if they are not to be specified in the absence of such evidence. Indeed it is more than doubtful whether the Court, under a general instruction to fix a reasonable price, is not more likely to fix a really fair price in its decision than if it were trammelled by directions that might not be wide enough to fit the conditions of every sale. So much has in any case to be left to the discretion of the Court, even if considerations are prescribed for its attention, that it seems better to put upon the tribunal the entire responsibility of determining a reasonable price according to its own judgment in all the circumstances.

Tenancy Interests.

The Board, acting wisely, would, no doubt, frequently offer the *bona fide* large farmer, whose land it was proposed to take for the relief of congestion, a better farm elsewhere. In some cases it would scale down the holding of a large occupier, leaving him land of at least £100 valuation. But as the law now stands the Board is bound to do neither. It can resume an entire holding, whether a small patch or an extensive ranch, for the relief of congestion wherever a judicial agreement exists; and while it is necessary to make compulsion applicable to holdings of every class of tenure, it seems undesirable to limit the discretion of the Board in the matter of land provision for those whose holdings are taken compulsorily. In relieving congestion the new Board should have a free hand in taking up farms of every class, those of tenant purchasers included, the price of the interest acquired by compulsion to be fixed by the Court after hearing those interested as to its value or any other relevant circumstance.

✠ PATRICK O'DONNELL.

Practical Primary Education in Congested Districts.

(*See paragraph* 246.)

I.

Underlying every plan for improving the condition of the people in the congested districts is the education received by children in the national schools. It is at once more necessary and more difficult to give primary education a practical aim in the poor districts than in the rest of the country. A broken attendance for some years at a national school sums up all the schooling most of the children receive. Distance, home occupations, want of food or clothing, and other reasons are rightly given for irregular attendance; and irregular attendance is of itself a bad education.

Whenever the teaching of Irish makes attendance more regular, the education, apart from everything else, is distinctly improved from a practical point of view, inasmuch as regularity and perseverance, with temperance, are essential to form a solid industrial habit in the young. Meals for very poor children, though a many-sided issue, would also bring some of this advantage.

But pupils who are going to earn their bread by the work of their hands have need, moreover, to be taught from the beginning to use their faculties skilfully in the line of the work that lies before them in life. This specially practical part of education need in no way interfere with reading, writing, arithmetic, or drawing, with music or drill. It in no way overburthens the pupil to whom it can be made a welcome variety and whose mental faculties it greatly helps to develop. Its difficulties arise from want of staff, accommodation, apparatus, and materials.

Since the Report of the Commission on Manual and Practical Instruction was published in 1898 it is agreed on all sides that primary education should have a practical aim; and certainly it would enormously facilitate the work of raising up the poorer districts if the schools gave practical instruction in the principles that underlie domestic and agricultural industry. Such training belongs to primary education. Indeed, as regards the working class, primary education has nothing so important for this world on its programme. It was always the kind of education the poorer districts needed; and without it, the expectation that the soil will be cultivated with the greatest care and skill or its produce turned to the best account, if entertained, would seem to rest on no sure foundation.

II.

The programme of practical instruction sanctioned by the National Board for girls can readily be made such as the pupils require in large schools with a duly qualified staff. Needlework, cookery, and laundry work, with lessons in health and temperance and household duties, all belong to a suitable elementary education for girls in home work, home care, and home industry. Such education can stand by itself, and no further education, technical or other, can well stand without it. For girls in the poorer districts this education is peculiarly needful, whether from the point of view of entering domestic service, or of utilising the produce of the farm and garden for the advantage of the household, or of engaging in cottage industries in a way that will serve the worker, the family and the community. In such a system the moneymaking cottage industry will not be allowed to oust the still more useful art of good house-keeping.

But the large schools for girls in the congested districts are comparatively very few. The population is scattered; and the schools are necessarily small and often mixed. The above programme, which is not for the youngest children, is difficult without a second room and, perhaps, still more, without a second teacher, considering the weight of the other school work, unless where a mistress has a special aptitude for giving instruction in domestic science. Whatever accommodation is necessary ought to be provided and the requisite apparatus without further tax on the local resources in poor places where the up-keep of the schools is already a heavy burden on the managers;

and until much more is done in training the teachers in domestic economy the best plan seems to be for the National Board to employ an instructress of the standing of those employed by the Congested Districts Board or by the County Committee of Technical Instruction. One visit in the week would suffice for each school and probably two schools could be visited on most days, with an allowance of two hours to each. The teachers could come to a convenient school on Saturdays for special instruction. In this way girls would receive at the primary schools the practical primary education they require; and the Congested Districts Board and the County Committee would be largely relieved from the need to provide in some hurried way for grown people some part of what all should have received at school in the ordinary course of their education.

III.

Practical education is not less important for boys than for girls. Here again, manual instruction and elementary science point to the need of a second room. Whether the teacher of these subjects is the school teacher or an itinerant instructor under the Board, or an instructor supplied by the Congested Districts Board, or the County Committee, the subjects belong essentially to elementary education, and are of the first importance for boys in the congested districts. To be useful in the world, no other part of primary education is so needful to them. This education again, can stand by itself, and it is the right preparation for technical, mechanical and agricultural training. Then, if every rood of Irish land is going to be turned to its best economic use, the elementary science course should be such as to illustrate practically, the principles that underlie the agricultural art. The treatment of soil and plant on reasoned principles, can be made a practical exercise of such interest, as to develop a delight in the skilful cultivation of the soil. Here the school garden comes in, and in favourable circumstances, the school farm. It is no more the province of primary education to turn out a trained farmer, than it is to turn out a trained cook. But just as a sound elementary education teaches a girl the principles and practice of all the cookery that is needed in the house of the small farmer; so, the principles underlying the best use of the soil in the neighbourhood, illustrated by practice suitable to his age, certainly belong to the primary education required by a boy, if he is destined for the farming occupation.

At least in the congested districts, Mr. Doran would like to see, as far as possible, a small farm attached to each rural school for boys, and the pupils trained to till it in a model manner. Many others, who would not go so far, desire that one central school in a parish should haue such a farm cared by a teacher of special aptitude and special training, and that all the teachers should be trained to manage school gardens properly. It is well known that in a consultation between representatives of the National Board and the Department, it was arranged to ask Treasury sanction for a somewhat similar scheme to operate all over Ireland. An important proviso is "that the teaching of agriculture, as distinct from school garden teaching, in schools under the National Board, should be undertaken only in a school organized as an upper primary centre to which pupils from the national schools in the neighbourhood could come." An arrangement of that kind for boys about to leave school behind, is absolutely necessary, if primary education is not to lack the practical aim that is essential to it; and the poorer the district, the more necessary it is that the primary schools should supply the practical education that will furnish children with some suitable preparation for their work in life.

These observations have been set down, not to suggest views to the National Board, with which they are not perfectly conversant, but with the object of emphasizing how important it is for the uplifting of the congested districts, that the practical part of the Board's programme should be allowed to operate fully in them.

✠ PATRICK O'DONNELL.

NOTE BY Dr. O'DONNELL and Mr. KAVANAGH

In favour of giving Compulsory Powers to the Estates Commissioners for the Relief of Congestion outside the Board's Area.

It is recommended in paragraph 312, that upon the Estates Commissioners should devolve the work of relieving congestion outside the area of the Board, by migration and the enlargement of holdings. For this purpose they are to have the powers of exempting from the restrictions of the zones any uneconomic holding on an estate that is being sold under the Act of 1903, but they are to rely on voluntary purchase alone for the acquisition of untenanted land for the relief of such congestion, *i.e.*, they are not to have the compulsory powers of the Congested Districts Board, because it is assumed that their field of choice is so large that they will not need them.

This seems to us to be imposing on them a task without giving them the full means of carrying it out. For this reason we would be in favour of giving them the right after they have tried voluntary purchase without success, to apply to a Court, such as we have already recommended, for compulsory powers to acquire such an amount of untenanted land as they require for the relief of congestion. They would in the first place, have to prove to the satisfaction of the Court that they have tried voluntary purchase, and have failed to obtain the land required at such a price as would enable them to re-sell to the tenants without unreasonable loss, and in the second place, that the lands that they wish to acquire are suitable and necessary for the purpose in view.

If they prove their case, the after procedure would be the same as in the case of the Congested Districts Board.

✠ PATRICK O'DONNELL.

WALTER M'MURROUGH KAVANAGH.

NOTE BY MR. KAVANAGH

On Liability of Tenant Purchaser's Holdings to be Taken for Relief of Congestion.

(Page 44, Paragraph 117, Section 5.)

I disagree with these recommendations—I am of opinion that the holding or holdings of any tenant-purchaser under any Land Purchase Act ought to be exempt from the operations of compulsory purchase. It is urged against this view, that if the property of the landlord is to be subject to compulsion, so ought that of the tenant-purchaser. I would put both on exactly the same footing. The landlord's demesne and home farm are, and rightly so, to be exempt from the operation of compulsory purchase. I think that the holding of the tenant-purchaser ought to be regarded as his demesne and home farm and as such reserved to him. In reality it is more to him than the landlord's demesne is to him—besides being his home it is probably his whole means of livelihood, and for that reason ought to be doubly secured to him. The whole aim and object of land purchase has been to create a peasant proprietorship, and if legislation is now to turn round and revoke the contract which has just been entered into, a great blow will be struck at all future land purchase, and, in my opinion, a great injustice done to one of the parties to that contract.

WALTER McMURROUGH KAVANAGH.

NOTE BY MR. CONOR O'KELLY.

With the organic changes in law and procedure, recommended for the better relief of congestion as set out in Section V., Paragraph 48* of Sir Antony MacDonnell's Minute of Dissent, I am in entire agreement.

CONOR O'KELLY.

* See page 172.
